	The Quantity Surveyor where mentioned, shall be taken to mean:-					
D	John J Casey & Co , Carrig House, West End, Ballincollig, Co. Cork. Contact Person: Conor Hannon, Ph. (021) 4873912		Note			
	Security of Site					
E	Contractor shall provide for fully securing the site from trespass. The site is located off Evergreen Road. The contractor shall confine his operations to the construction work areas and shall not allow his operatives to trespass beyond these confines. Construction traffic noise shall be kept at the lowest possible level.		Note			
	Existing Buildings / Adjoining Land Uses etc.					
F	Refer to Architect's Drawing Nos. 103 & 104. The contractor will be required to familiarise himself with the site and the surrounding areas, prior to submitting their tender. The contractor should familiarise himself with all businesses, public facilities, residences, schools, bus depot, traffic volumes etc., which may be effected by the works, and ensure that adequate provision is made for providing suitable control measures on and adjacent to the site, to protect the Safety Health and Welfare of all persons effected by the works, including local residents, pedestrians, cyclists, motorists and public transport service users. The contractor must so plan and execute the work in order to cause the minimum disruption and inconvenience to the running of adjoining properties.		Item			
				To Collection €		

					€	c
	Traffic Management Plan					
A	The successful Contractor will be required to submit an approved Temporary Traffic Management Plan prior to work commencing on site. The contractor is advised that works will not be permitted to proceed until thisTraffic Management Plan is in place and approved by all relevant parties. The Temporary Traffic Management Plan should be designed by a competent TTM Designer engaged by the main contractor. This TTM Plan, should be issued to the PSCS, to allow him/her to coordinate the implementation and operation of the Temporary Traffic Management Plan. At Tender Stage, Contractors will be required to demonstrate that they have given adequate consideration to the Management of Traffic for the duration of the works, and the impact the works will have on the local traffic and pedestrians. Pedestrian management will be crucial to the plan. All Road Works to be in accordance with Chapter 8 Temporary Traffic Measures and Signs for Roadworks. Reference should also be made to HSA Publication 'Guidance for the Control and Management of Traffic at Roadworks'. The Contractor is to take account of the impact the site traffic will have on the local environment, and devise and implement a suitable traffic and pedestrian management system, taking particular care at Evergreen Road the planned entrance to the site and at the entrances to adjacent properties. A clear route for Ambulance and Fire Tender access must be maintained at all times. The Contractor shall ensure all routes are kept free and unblocked at all times. The Contractor is to monitor and control materials delivery to site and removal of waste materials from site in order to ensure that the roads surrounding the site, all of which are fire tender access routes, are maintained free flowing at all times. No reversing of vehicles on to Evergreen Road will not be permitted at anytime. The contractor will be obliged to give Bus Eireann advance warning of the works on Evergreen Road, and also to liaise with them to acquire details of the bus timetable, in order to familiarise themselves with the busy bus timetable. A Road Opening licence will be required for any works on Public Roads, Footpath or Green areas.		Item			
B	Pedestrian exit from school and vehicular emergency exit from school to be maintained at all times as indicated in Option 3 on Architects Drawing No. 101.		Item			
C	Provide ongoing traffic control during the construction stage when traffic is exiting and entering the site.		Item			
				To Collection €		

					€	c
	Cleanliness of Private / Public Roads / Paths					
A	The Contractor shall include provision of wheel wash and keep private / public roads clean and free of obstruction at all times and make good any damage caused by construction work and traffic at his own expense. All warning signs including traffic control lights, flag men as necessary for the protection of the public shall be provided.		Item			
	Visit Site					
B	Contractors are strongly advised to visit the site and ascertain the facilities and access thereto, the supply of labour and materials the district will afford, the general convenience of working, the nature of the soil, the nature, character, dimensions, levels and other features thereon and adjoining properties, available space around the position of the buildings, adequacy of area available for storage of materials and position of huts, sheds etc. and all things insofar as they may have any connections with or effect the full and proper execution of the works. They will be deemed to have taken all the above matters into account when tendering and no claim for any payment will be allowed in consequence of the Contractor's failure to do this. Arrangement to visit the site should be made through the Ms. Anne-Marie Cooke, Carr & Naessens Tel: (021) 4847123 / Email: acooke@ccnarchitects.net		Item			
	Consents					
	<u>Planning and other consents obtained or to be obtained by the Employer are;</u>					
C	Planning Approval (Part 8)		Note			
D	Fire Certificate		Note			
E	Disability Access Certificate		Note			
	<u>Consents to be obtained by the contractor are:</u>					
F	The Contractor shall obtain all Consents necessary		Item			
G	The Contractor shall give and comply with all notices and pay all taxes, fees and charges required under Legal Requirements to be paid in connection with performing the Contract		Item			
				To Collection €		

					€	c
	<u>Survey of existing buildings, existing roads, ground levels, roads, entrances levels</u>					
A	Allow for providing full level checks and digital local area surveys to existing buildings, ground levels, roads, entrances prior to any procurement to ensure co-ordination of the project. Also on completion of works a full level survey will be required.		Item			
B	The Contractor shall signify in writing his agreement to the correctness of the existing ground levels, as indicated on the drawings, before commencement of the works and before the existing ground levels are disturbed.		Item			
C	If the Contractor is of the opinion that the existing ground levels vary from those shown on the drawings he shall immediately seek instructions and clarification from the Employer`s Representative. Failure by the Contractor to comply with this requirement will be taken to indicate there is no divergence between the existing levels and those shown on the drawings. Unilaterally prepared records will not be accepted after the completion of excavation works concerned.		Item			
	Advertising					
D	All advertising rights are reserved for the Employer.		Note			
	Avoid Disruption					
E	The contractor should so plan and execute the work in order to cause the minimum disruption and inconvenience to the adjoining properties.		Note			
	Safety of Occupants					
F	The existing adjacent lands, properties, paths and roads will remain occupied or usable during the execution of the Contract and the Contractor shall therefore take necessary precautions to protect all from dust, excessive noise and other interference arising from the work.		Item			
	Security of Existing Properties					
G	The security of the existing adjoining properties is to be maintained at all times and shall not be compromised by contractor's scaffolding, ladders, hoarding, or in any other manner.		Item			
				To Collection €		

					€	c
	The Site					
A	Notwithstanding the inclusion of the Preliminary Health & Safety Plan in the Tender Documentation the Contractor must, prior to submission of tender, visit the site, and ascertain all local conditions relevant to the carrying out of the Works.		Item			
	Ground Conditions					
B	A Site Investigation Report has been included in the Tender Documents		Item			
C	The tenderer is afforded the option of carrying out Site Investigations during the tender period.		Item			
	Description of Site					
	Site boundaries					
D	The site boundaries for the works are as indicated on Architect's Drawing Nos. 101 Option 3, 103 & 104		Item			
	Restrictions on access					
E	The design of the site entrance at Evergreen Road will be subject to approval of the Client and the Cork City Council Roads Division. In addition to the main double gate access / exit a separate entry and exit gateway should be provided for pedestrians entering / exiting site in order to minimise the risk of pedestrians being struck by site vehicles. The contractor is to ensure that extra vigilance is maintained at all times adjacent to the site entrance for the presence of young children on foot and or on bicycles. The contractor is not to obstruct any emergency vehicle, refuse collection and deliveries to the adjacent businesses at any time. The contractor is to implement an appropriate booking in-and-out system for all site personnel and visitors. Procedures are to be put in place for Safe-pass and other certification methods. Contractor's personnel shall carry appropriate (and visible) identification at all times on site. The contractor shall implement a site-specific Health and Safety induction procedure. The contractor is to visit the site in order to satisify himself that he is aware of all local conditions affecting site access; no claims will be entertained for the contracters failure to do this. All access requirements including fire tender access and temporary escape routes are to be maintained. Pedestrian exit from school and vehicular emergency exit from school to be maintained at all times as indicated in Option 3 on Architects Drawing No. 101.		Item			
				To Collection €		

					€	c
A	Restricted Areas - The site is adjacent to a primary school, Bunscoil Chriost Ri to the SouthThe Capwell Bus Depot is to the North of the Site. A number of residential buildings as well as other retail are located on the street to the North of the site. Residents and Users must have access at all times to their houses, school, bus depot, businesses etc. and allocated parking areas. All emergency vehicles and all normal service vehicles must have continuous uninterrupted access at all times. At any pinch points, a minimum carriage width of 3 .5m must be maintained at all times (unless otherwise agreed with Cork City Council's Roads Department, the Gardai and CCC Traffic Division). Service connections and infrastructural work are to be carried out with minimum disruption to the existing residents, schools & businesses. Contractors Traffic Management Plan to fully accommodate local traffic residents parking and pedestrians. While the Works are ongoing the Contractor will direct the residents to suitable alternative routes / parking areas, if necessary, safe vehicular and pedestrian access must be maintained to all dwellings and business. Any disruptions by continuous works in an area outside of the site curtilage, the Contractor to agree and approve with residents and Cork City Council. Pedestrian exit from school and vehicular emergency exit from school to be maintained at all times as indicated in Option 3 on Architects Drawing No. 101.		Item			
B	The Contractor shall ensure that no damage is caused to any existing buildings, or services due to the delivery of materials, the execution of the works or the removal of rubbish. The Contractor shall be entirely responsible for any damage due to his failure to comply with this clause.		Item			
C	The Contractor must ensure that he complies in full and with all Local Authority and Garda Siochana requirements and restrictions which may affect the site and access thereto including any restrictions in the locality.		Item			
				To Collection €		

					€	c
	Proposed Site & Interface With the Existing Environs (all as per Architects Drawing No. 101 Option 3 & 104)					
A	Site Boundaries, Pedestrian Access and Control - (Refer also to Preliminary Safety and Health Plan) - The suggested extent and location of the Site Boundary and hoarding is shown outlined in RED on Architects Drawing Nos. 101 Option 3 & 104, Contractor to provide and maintain a safe pedestrian pathway outside the line of Site Hoarding. Contractor to be cognisance of allowing adequate sightlines at all junctions. This will form part of the main contractor's traffic management plan. Pedestrians shall be made aware of the Site Entrance, which will be located at Evergreen Road. A safe transfer across the site entrance must be provided. A safe and adequate access for existing residents must be provided and maintained in all areas for the full duration of the Works. All existing public lighting levels must be maintained on existing roadways, pedestrian footpaths and access routes. All new pedestrian routes, along with parking areas must be fully lit by the Contractor and at his own expense. Liaison with CCC Public Lighting Department will be required. The operation and control of this shall form part of the Contractor's Traffic Management Plan and be agreed with Cork City Council Traffic Division prior to the commencement of works. Pedestrian exit from school and vehicular emergency exit from school to be maintained at all times as indicated in Option 3 on Architects Drawing No. 101.		Item			
B	Site Entrance and Compound (Refer also to Preliminary Safety and Health Plan) - The Contractor's Site Compound must be within the area of the proposed Site, which is outlined in RED on Architects Drawing Nos. 101 Option 3 & 104. For the duration of the Works, all site access must be off Evergreen Road. The Site Entrance must allow for adequate sight lines and must be supervised at all times. Via designated points, safe pedestrian transfer across this entrance point, shall be allowed for. Adequate sight lines must be provided at all traffic and pedestrian junctions. All proposed to and agreed with CCC Traffic Division. This is the Contractors responsibility. The operation and control of this will form part of the Contractor's Traffic Management Plan as agreed with Cork City Council Traffic Division, prior to the commencement of works.		Item			
				To Collection €		

					€	c
A	Works outside of the SITE - Public Roads, Footpaths and Green areas. The Works Requirements for This development includes for Works outside of the site curtilage. Works outside of the site curtilage are necessary for service diversion and connections. The Contractor shall ensure the continuity of all existing utilities in the immediate and surrounding areas during these Works. The Contractor must prepare Traffic Management Plans for all necessary traffic restrictions: i.e. necessary routes, parking and flow, along with the safe management of pedestrians, to be agreed with and approved by CCC Traffic Division. All works carried out on Public Areas - namely roads footpath and greens, must be by the consent and agreement of Cork City Council's Roads Department, the Gardai and CCC Traffic Division. Specific licensing procedures apply. It is a requirement that any excavation on a public area or public road be reinstated daily to the satisfaction of Cork City Council's Roads Department. The contractor to seek the approval of CCC Traffic Division for any temporary proposals.		Item			
	Position of the Works					
B	The position of the Works is as indicated on Architect's Drawing Nos. 101 Option 3 & 104		Item			
	Information on isolated/adjacent structures					
C	The Contractor must visit the site, prior to submission of his tender, and ascertain all local conditions, including but not limited to those of the isolated / adjacent structures and other restrictions that will or are likely to affect the execution of the works. No claim will be entertained for any lack of knowledge, understanding or appreciation of the nature and complexities of this contract. The site area that will be available to the contractor are shown on Architect's Drawing Nos. 101 Option 3 & 104.		Item			
	Carparking					
D	Car-parking on site should be resticted to Contractor's Compound only and off site. The contractor and employees must not use or impede the use of other car-parking areas adjacent to the site.		Note			
E	The Contractor will not be allowed to store materials or park trucks on any part of the public roadway access. The Contractor will also be required to ensure that the Contractors entrance gate from the public roadway is kept locked at all times other than when required to be opened for delivery and access purposes. No other carparking will be provided outside the site boundary.		Item			
				To Collection €		

					€	c
	Contractors Site Compound					
A	The Contractors site / compound shall be restricted withing the red line works boundary as indicated on Architect's Drawing Nos. 101 Option 3 & 104 and will be required to position all huts, sheds, toilet facilities, storage of materials etc. within this area. Contractors shall provide all their own Welfare Facilities and will not be allowed use of existing facilities.		Item			
	Waste Management					
	The Contractor is to comply fully with the full requirements of the Waste Management Acts 1996 to 2010. The Contractor is to provide a Waste management Plan for the works					
	Waste Management					
B	The Contractor is to comply fully with the full requirements of the Waste Management Acts 1996 to 2010. The Contractor is to provide a Waste management Plan for the works		Item			
C	The Contractor is to allow for operation of compound to comply with Construction Waste Management Plan.		Item			
D	Contractors should include for full compliance with the EPA Best Practice Guidance (which is included in the Information Pack) on preparation of construction and demolition waste management plans for construction projects. This should form part of the contractor's waste management plan and compliance with the waste management plan is mandatory.		Item			
	Planning Conditions					
E	The Contractor is to allow for complying with all Conditions of Planning (Part 8)		Item			
	Existing Extensive Services on, under or over the site					
F	Existing services known to exist on site are shown on Engineers drawings. Particulars of all known existing services will be indicated to the Contractor on site. He must also use his best endeavours to determine the position of all existing underground services prior to starting excavations. The Contractor shall maintain existing services as required by the Design Team		Item			
				To Collection €		

					€	c
A	The Contractor shall fully satisfy himself as to the exact location of all existing services. The Contractor should contact the Electricity Supply Board, other Statutory Undertakings/ Public Utilities and the local County Council in relation to power cables, telephone cables, drains and watermains in advance of any excavation or opening up of work and formulate a contingency plan to ensure an immediate emergency response by the relevant bodies in the event that such services are damaged.		Item			
	Notification of Work					
B	Before any work commences affecting any operational areas of local area (eg road disturbance), proper notification including details of work, site limitations, programme etc must be submitted and agreed with the Employer's Representative.		Item			
	Temporary Closing of Services					
C	Temporary closing of services or any work in making connections to existing services connected to existing buildings on site shall be carried out only after seven days prior written notice to the Employer's Representative and then at such times as he shall agree after consultation with the Employer		Item			
	Damage to Services					
D	The Contractor shall take all reasonable precautions to protect all services against damage. In the event of any damage the contractor shall immediately report the matter to the Employer's Representative and shall make good all damage at his own cost		Item			
	Maintenance of Existing Services					
E	Protect, uphold and maintain all pipes, ducts, sewers, service mains, cables etc., during the execution of the works. The contractor is to make good any damages due to any cause within his control at his expense and pay any costs and charges in connection therewith		Item			
				To Collection €		

					€	c
	Services Co-Ordinator					
A	The Contractor will be required to employ, and assign to the project, a suitably qualified engineer whose duties will be to co-ordinate both internally and externally the design of the mechanical, electrical, fire protection and related services, and their relationship to, and integration with the building design. To this end it will be part of his duties to liaise with all parties concerned, on both the design and contracting side to ensure a satisfactory resolution of any problems regarding the integration of services into the building. The Contractor shall notify the Employer's Representative of the name of the person so appointed and his normal place of work.		Item			
	Health & Safety Hazards					
	Asbestos Containing Material					
B	Duty: report immediately any suspected materials discovered during execution of the works. Do not disturb.		Item			
C	General: The nature and condition of the site/ building cannot be fully and certainly ascertained before it is opened up. However the following hazards are or may be present. Information: The accuracy and sufficiency of this information is not guaranteed by the Employer, Architect or Project Supervisor Design Process. Ascertain if any additional information is required to ensure the safety of all persons and the Works. Site staff: Draw to the attention of all personnel working on the site the nature of any possible contamination and the need to take appropriate precautionary measures.		Item			
	Areas of Work involving Particular Risks known to Contracting Authority					
D	A risk of infection from biological material is presented when stripping out and demolishing existing structure and fitments and in particular when working on sanitary accommodation and sewers. A risk is always present of discovering previously undiscovered asbestos containing material.		Item			
	Convenience of others					
E	The Contractor shall consult the convenience of anybody who may be affected by the work with regard to the approaches to be used, suitable times for making deliveries and all other matters affecting them.		Item			
				To Collection €		

					€	c
	Hoarding, fences, screens, temporary roof, advertising rights					
	Temporary fencing, hoarding, screens, planked footways, guard rails, gantries and similar items					
A	Provide temporary fencing (min 2400mm high) timber solid hoardings for protecting the public for the proper execution of the works and for effectively enclosing and protecting the site including full perimeter of site compound against trespass and interference. Obtain approval from the Employers Representative for all temporary hoardings and fences and comply with the requirements of the Local Authority and as per the Architects's Drawing Nos. 101 Option 3 & 104		Item			
B	All advertising rights are reserved by the Employer		Item			
	Pedestrian Walkway					
C	A safe, well lit, pedestrian walkway shall be provided along the side of the site hoarding at Evergreen Road. All pedestrian walkways shall be well lit in a manner that avoids dark spots and the risk of increased anti-social behaviour. Particular consideration shall also be given to the management of pedestrians adjacent to the Site Entrance. Clear segregation of construction vehicles and pedestrians will be a priority. Where public walkways cross roadways / site entrance, the contractor shall provide a clearly signed and lit crossing point where drivers and pedestrians can see each other clearly. Contractor's proposals for barriers are to be included in the Traffic Management Plan. Refer to 'Traffic Management Plan' above. The contractor shall ensure that pedestrian walkways are not blocked at any point and that pedestrians are not forced to step onto the vehicle route at any time.		Item			
	Site sign board					
D	The Contractor shall include for the cost of a 1No suitable site sign board approx. 2.40m x 4.00m high x 3.00m above ground., including all necessary supports, foundations, etc. bearing the names of the Employer, Employer's Representative, Design Team, Main Contractor and Sub-contractors etc. The Employer's Representative's approval to the design, layout and location of this board shall be obtained before it is erected. Include for removal on completion.Temporary structure fot site signage to be designed by contractor.		Item			
				To Collection €		

					€	c
	Noise Levels / Control					
A	Noise during site clearance and construction shall not exceed 65 dB (A), Leq 30minutes and the peak noise shall not exceed 75 dB (A), when measured at any point off site.					
B	Noise levels shall be kept to a minimum with special silencers, mufflers and suppressors applied to plant, tools etc. Close liaison shall be maintained between the Employer, Employer's Representative and Contractor to ensure overall noise levels are maintained to an acceptable level. Particularly noisy activities shall not be carried out between 6.00 p.m. and 8.00 a.m. Saturday & Sunday works will not be permitted. Include for complying with all requirements on Noise Control.		Item			
C	The Contractor shall include for compliance with BS 5228- Noise and Vibration Control on Construction Sites, and for compliance with all current Health and Safety Regulations. Fit all compressors, percussion tools and vehicles with effective silencers of a type recommended by manufacturers of the compressors, tools or vehicles. The Contractor will be required to liaise closely with the Employer's Representative so as to minimise the nuisance caused by noise and no extra cost will be recoverable for compliance therewith.		Item			
D	Noise levels from the proposed development shall not be so loud, so continuous, so repeated, of such duration or pitch or occurring at such times as to give reasonable cause for annoyance to a person in any premises in the neighbourhood or to a person lawfully using any public place. In particular, the rated noise levels from the proposed development shall not constitute reasonable grounds for complaint as provided for in British Standard 4142 Method for rating industrial noise affecting mixed residential and industrial areas.		Item			
E	Prior to commencement the Main Contractor shall submit for written agreement, details outlining how it plans to undertake all piling on site. Please refer to British Standard 5228:2009+A1:2014 Code of practice for noise and vibration control on construction and open sites Part 2.		Item			
				To Collection €		

					€	c
A	Prior to the commencement, the Main Contractor shall identify all potentially significant noise sources at the proposed development site, and their expected noise output quantified by (a) reference to LWA levels or LAeq T levels (at a specified distance) provided by the manufacturer/supplier, (b) reference to typical levels set out in the relevant British Standards BS 4142:2014+A1:2019, or (c) direct measurement of the equipment onsite or at a similar facility. Items that need to be considered are extract fans, air-conditioning, and plant room. (This is a non-exhaustive list.)		Item			
B	Allow for complying with all requirements for noise control		Item			
	Dust control					
C	Allow for complying with all requirements for dust control		Item			
	Employer's Display Requirements					
D	Allow for complying with Employers Display requirements		Item			
	Progress Photographs					
E	Progress Photographs showing the Work shall be taken at weekly intervals per Section A32 280 of Architects Preliminaries to demonstrate rate of contractor progress on site. All images shall be numbered, filed and on completion shall become the property of the Client. The contractor shall not use any advertisement nor sanction any publication in connection with the Works without the written agreement of the Employer		Item			
	Cleanliness					
	Removing rubbish, protective casings and coverings and cleaning the works on completion must be provided to a very high standard by professional cleaners					
F	Remove all rubbish from the works as it accumulates and maintain the works in a clean and tidy condition for the duration of the contract. Clean the works internally and externally, remove all rubbish and leave the entire works in a tidy condition ready for immediate occupation or use.		Item			
				To Collection €		

					€	c
	Title					
	Historical Finds					
A	All fossils, coins, articles, structures and other remains or other things discovered on site of the works shall be the absolute property of the Employer, and the Contractor shall take all precautions to prevent his workmen or any other persons from removing or damaging any such articles or things and shall immediately upon discovery thereof and before removal acquaint the Architect of such discovery.		Item			
	Drawings, Specifications, Schedules and Reports					
	Drawings and Other Documents					
	Tender Documents					
	The Tender Documentation consists of the following;					
B	Information Pack		Note			
C	Tender Invitation Letter		Note			
D	Form of Tender / Schedule		Note			
E	Schedule of Works Requirements		Note			
F	Pricing Document		Note			
G	This project will require careful adherence to the Works Requirements and liaising with the Design Team in all respects.		Note			
	Building Regulations					
H	The contractor shall ensure that all work is in full compliance with the Building Control Regulations 1991 and Regulations current at date of tender, whether or not such itemised requirements are stated in the Works Requirements and/or the Pricing Documents		Item			
	Arrangements for inspection					
J	A full set of Tender Documents and other documents relating to the Contract may be seen by prior appointment with the Employer's Representative		Note			
				To Collection €		

					€	c
	Schedule of Condition					
A	The Contractor is advised that a Schedule of Condition will not be available at tender stage. The successful contractor will be invited to meet with members of the design team on site prior to commencement of any site operations. The condition of the employer's buildings and those of adjoining owners and occupiers will be discussed and agreed by the Contractor and the Consultants.		Item			
	<u>Drawings and documents from which Bill is Prepared</u>					
	Cotter & Naessens Architects

	Bills of Quantities, Standard Method of Measurement					
F	These Bills of Quantities is generally measured in accordance the Agreed Rules of Measurement (ARM4), 2009, as prepared and revised by the Joint Committee established by the Construction Industry Federation and the Society of Chartered Surveyors. Incorporating the Department of Finance approved current list of amendments for Public Works Contracts Designed by the Employer		Note			
G	Notwithstanding the Agreed Rules of Measurement, deviations from same may occur where work has not been measured in detail but in such instances, the description given in the Bill of Quantities (Pricing Document) shall be deemed to be fully inclusive of all requirements		Note			
	Bills of Quantities : Format					
H	The Bills of Quantities are set out in Elemental form in accordance with the National Standard Building Elements, second edition, April 1973 and published by An Foras Forbartha.		Note			
				To Collection €		

					€	c
	Unpriced Items					
A	Costs for items which are not priced shall be deemed to be included in priced items in the Bill of Quantities.		Note			
	V.A.T.					
B	All items in these Bills of Quantities should be priced exclusive of the cost of Value Added Tax. Provision is made at the end of the General Summary for the addition of V.A.T..		Note			
	Customs Duties					
C	The Contractor will be deemed to have included in his tender for all Customs and other duties legally payable at the Designated Date.		Item			
	Special Condition.					
D	1. All Tenderers shall submit proof of current insurance with their tenders.		Note			
	Price in Detail					
E	1. The Bills of Quantities, fully priced, must be submitted at the time of tendering.		Note			
F	2. Please note that the Bills of Quantities must be completed and signed by an authorised person in ink. Pricing in pencil is not acceptable.		Note			
G	The contractor is referred to the measurement & prices clauses in section A "General Rules" and the relevant sections of ARM4. Incorporating the Department of Finance approved list of amendments for Public Works Contracts Designed by the Employer		Note			
H	The contractor will price every item that has a value and use realistic rates to facilitate accurate costings of variations and claims. Unpriced items will be deemed to have there cost included elsewhere or to be nil value. Unrealistic rates submitted in the bill of quantities will be subject to adjustment in order to achieve a fair and reasonable balance within the contract document.		Note			
	<u>General arrangement, working and construction drawings</u>					
J	The Contractor shall make available and maintain a full set of the Works Requirements and up-to-date construction drawings and working drawings on site for ease of reference by the Design Team		Item			
				To Collection €		

					€	c
	Materials and Workmanship Specifications					
A	The Contractor shall allow here for carrying out the Works in strict compliance with the Works Requirements and to the satisfaction of the Employer's Representative		Item			
	Materials and Workmanship					
B	The materials and workmanship shall be to the satisfaction of the Employer's Representative and shall be the best of their respective kinds. Materials shall comply where applicable to the current Irish or British Standard. All trade practices customary in ordinary good quality work shall be observed so as to ensure a sound and satisfactory job. All materials shall be used, applied and fixed strictly in accordance with their manufacturer's instructions, together with all necessary appliances, accessories, etc., as may be recommended by them. All work shall be carried out by competent tradesmen under the supervision of the Contractor or reliable foreman.		Item			
C	The term "Standard" in the Specification means that the articles or services specified shall conform to the latest appropriate Irish Standard Specification or where such is not available to the appropriate British Standard Specification.		Item			
	Samples					
D	Samples of all materials, manufactured articles and executed work shall be submitted to the Employer's Representative for approval before adoption. Such approval will not relieve the contractor from responsibility for any defects.		Item			
	Submission of Samples					
E	If requested by the Employer's Representative, samples of all materials proposed to be used for the works shall be submitted to him, together with the name and address of the supplier and such information, instructions and directions as the supplier has issued. Samples shall then be subject to the Engineer's approval prior to the delivery of the materials to the site. All materials delivered to and used upon the works must be at least equal in quality to the same, and the Contractor shall ensure that he complies with all manufacturer's instructions and recommendation. Any materials condemned by the Engineer as unfit for use in the works shall be immediately removed from the site at the Contractor's expense.		Item			
				To Collection €		

					€	c
A	The Contractor shall include here for supplying All samples requested in the specifications.		Item			
B	All samples also includes those listed in Section 2.2 Samples of Carrig Conservation Specification. If cost of same is not included above it should be included here.		Item			
C	Allow for complying with all requirements for samples / mock-ups.		Item			
D	All materials and prefabricated items shall be manufactured and tested in accordance with the specified requirements. When evidence of conformance depends solely on inspections and tests performed by a Sub-Contractor, Manufacturer, Supplier or independent inspecting authority, the Contractor shall ensure that such evidence is satisfactory and that appropriate records are maintained.		Item			
E	No materials or prefabricated items shall be used in the works until it has been verified that they comply with the specified requirements		Item			
F	Where appropriate, all materials and prefabricated items delivered to the site shall bear the Manufacturer's name, brand name, or any other detail that may be required to verify the exact nature of the material or item and relate it to the specified requirements.		Item			
G	Where applicable, materials and prefabricated items shall be obtained from Suppliers and Manufacturers who have been assessed by an independent certification authority accredited by the National Accreditation Council for Certification Bodies.		Item			
H	Where applicable, materials and prefabricated items shall bear the British Standards Institution Certification mark, the British Board of Agreement Certification mark or other appropriate certification mark.		Item			
J	Transportation, handling and storage of materials and prefabricated items shall be controlled to prevent mis-use, damage or deterioration.		Item			
K	The Contractor shall operate quarantine procedures for the identification and isolation of materials and prefabricated items that do not comply with the specified requirements.		Item			
L	Works test certificate shall include, whenever applicable, the location in the works or the delivery or batch which the sample represents.		Item			
				To Collection €		

					€	c
	Deleterious, Hazardous or Undesirable Materials					
	The materials listed below shall not be used on the project either in temporary works or incorporated in the permanent works in any shape of form:-					
A	(a) High Alumina Cement or Concrete;		Note			
B	(b) Calcium Chloride;		Note			
C	(c) Calcium Silicate or sandlime bricks or tiles;		Note			
D	(d) Pyrites		Note			
E	(e) Asbestos products;		Note			
F	(f) Wood Wool;		Note			
G	(g) Crocidolite;		Note			
H	(h) Sea Dredged Aggregates;		Note			
J	(i) Urea Formaldehyde;		Note			
K	(j) Materials containing fibres with a diameter of three microns or less and a length of 200 microns or less;		Note			
L	(k) Polytetra Fluroethylene (PTEE) except when used as a non stick sealing within valves, joining material between pipes or as an isolating tape;		Note			
M	(l) Mineral fibres (man made or naturally occurring) which are not stabilixed materials to prevent fire migration.		Note			
N	(m) Halon		Note			
P	(n) Lead based paint; and		Note			
Q	(o) any other material generally considered to be deleterious at the time of use.		Note			
	Removal of Improper Work and Materials					
	The Employer's Representative shall have the power to order during progress of the Works :-					
R	(a) Removal from the site of any materials which in his opinion are not in accordance with the Contract.		Item			
S	(b) Substitution of proper materials		Item			
				To Collection €		

					€	c
A	(c) Removal and proper re-execution (notwithstanding any previous test thereof or interim payment therefore) of any work which in respect of materials or workpeople is not in accordance with the Contract.		Item			
	Procurement of Materials					
B	The name, nature and location of the Works		Item			
	Certificate of Standards					
C	Products / materials shall either be certified as complying with the Irish Standard Specification and shall bear the Irish standard mark or shall be certified to a National Standard of another member State of the European Union which provides an equivalent guarantee of safety and suitability - certification to be by the National Standards Authority of Ireland.		Item			
	Technical Support					
D	The Contractor shall ensure that full technical support is available from material suppliers for the duration of the contract. Include for all costs in connection with same.		Item			
				To Collection €		

					€	c
	Vesting Certificates					
A	Within 21 days of acceptance of his/her tender the Contractor shall send to the Employer's Representative a list of the Suppliers from whom the Contractor or Sub-Contractor intends to obtain goods or materials to be embodied in the works and (if not direct Suppliers) the manufacturer's of each item of plant to be embodied in the works that exceeds €6,350.00 in value. The Contractor shall also notify the Employer's Representative promptly in writing of any addition to the list during the course of the works. The list and any additions to the list shall be accompanied by a vesting certificate from each Supplier and manufacturer named. A vesting certificate shall certify that the full ownership (free of any lien or charge) in all goods and materials delivered by or with the authority of the Supplier or manufacturer to the Contractor or Sub-Contractor (whether on the Site of the Works or elsewhere) shall pass irrevocably to the Contractor or Sub-Contractor not later than such delivery notwithstanding any terms of contract of the Supplier or manufacturer and whether or not the Supplier or manufacturer has been paid for the goods and materials. The Contractor shall include with every progress application written evidence that any goods or materials in respect of which payment is requested are the subject of a vesting certificate furnished to the Employer's Representative by the Supplier and (where relevant) manufacturer in accordance with the previous sub-Clause. In the absence of such evidence no payment shall be certified in respect of goods or materials		Item			
	Patent Rights and Royalties					
B	The contractor shall save harmless and indemnify the Employer for and against all claims and proceedings for or on account of infringement of any patent rights, design, trademark or name or other protected rights in respect of any constructional plant, machine, work or material used or in connection with the Works.		Item			
	"Or equal approved" in relation to propriety item or specified element of the works					
C	The term "or equal approved" shall mean alternative which in terms of performance, durability and fitness for use can achieve the level at least equivalent to the item or element of work specified. The onus to verify such equivalence shall rest with the contractor. Approval to include such alternatives shall be at the sole discretion of the Employer's Representative and unless stated in writing otherwise should only be on the basis of equivalent as outlined above.		Item			
				To Collection €		

					€	c
	The term "with"					
A	Where the term "with" is used in item headings and descriptions in this bill of quantities (eg. "fixed with 2 nr hiliti bolts") it will be understood to mean "including" unless otherwise stated		Item			
	Measurements					
B	Notwithstanding anything shown on the drawings, the Contractor shall check all dimensions on site before putting work in hand, and shall be responsible for the dimensional coordination of all parts of the work.		Item			
	Temporary works					
C	The term "temporary works" shall mean all temporary works of every kind required in or about the construction, completion, and maintenance of the works; it shall include temporary works to support and ensure the stability of the partially completed works and of adjoining structures and lands, as well as such matters as trench shoring, scaffolding, propping, working platforms, gangways, access stairs and landings.		Item			
D	The Contractor shall appoint an approved, competent Temporary Works Designer who shall take overall design responsibility for the stability of the partially completed permanent works and of adjoining structures and lands during the envisaged construction process and, further the Contractor shall employ a suitably qualified site engineer; both shall liaise with each other and with the Project Supervisor Design Process and Project Supervisor Construction Stage, all in accordance with the HSA Guidelines to Safety, Health and Welfare at Work (Construction) Regulations 2006.		Item			
E	The Contractor shall submit with his tender a method statement detailing his proposals for the temporary works. The Contractor is required to submit full design calculations with his tender.		Item			
F	The Contractor is to assume full liability for the design and execution of all temporary works in connection with this project.		Item			
				To Collection €		

					€	c
	Restrictions and Obligations					
	Obligations and Restrictions Imposed by the Employer					
	Limitations of working space					
A	The Contractor will be required to work within the boundaries for the Works as indicated on Architects's Drawing Nos. 101 & 104 unless otherwise approved in writing by the Employer's Representative.		Item			
	Time for completion					
B	The Works are to be completed in 24 months (104 weeks) from contract commencement in accordance with the agreed construction programme including Certificate of Compliance at Completion on Register and including 50 days Programme Contingency (T1 30 days & T2 20 days)		Item			
C	The Contractor is to allow adequate time to source materials, taking into account the requirement to obtain any necessary licenses.		Item			
	Limitations of working hours					
D	Subject to any provision to the contrary contained in the contract working hours are to be 8.00am-6.00pm Monday to Friday. No work is to be carried out on Saturdays, Sundays or Bank Holidays. Overtime shall not be worked without the prior express permission in writing from the Employer's Representative, save when the work is unavoidable or absolutely necessary for the saving of life or property or for the safety of the works in which case the Contractor shall immediately advise the Employer's Representative.		Item			
	Convenience of others					
E	The Contractor shall consult the convenience of anybody who may be affected by the work with regard to the approaches to be used, suitable times for making deliveries and all other matters affecting them.		Item			
	Maintenance of existing services on or over the site					
F	Maintain all the existing live services which cross the site, during the execution of the work.		Item			
				To Collection €		

					€	c
	Other work on the Site to be carried out concurrent with the Works by the Employer's Personnel or others concurrently with the Works					
A	Works carried out by others employed by the likes of Electricity Supply Board, An Bord Gais, other Statutory Undertakings/ Public Utilities and the local County Council in relation to power cables, telephone cables, drains and watermains		Item			
	Order of Work					
B	On being granted possession of the site the Contractor shall commence and proceed with the execution of the Works in such order as may be most appropriate and in accordance with the Employer's Representative's direction.		Item			
	Road closure restrictions, alternative route restrictions					
C	The Contractor shall allow here for strict compliance with the relevant authorities requirements in relation to road closure restrictions and alternative route restrictions, including but not limited to the timely application for licenses and paying all fees for same		Item			
	Any other obligations or restrictions					
	Freedom of Information					
	(i) The Client proposes that the following information relating to this tender competition will be made available on request under the Freedom of Information Act 1997:					
D	(a) The name of the Contractor who is awarded the contract, and the total amount of the tender.		Item			
E	(b) To the unsuccessful tenderers the reasons why their tender was rejected.		Item			
F	(ii) The Client undertakes to hold confidential, any information provided by in this tender subject to :		Item			
G	(a) disclosure of the information specified at (i) above as liable for release to the public,		Item			
H	(b) their obligations under law, including the Freedom of Information Act, which came into force on 21st April, 1998,		Item			
				To Collection €		

					€	c
A	You are asked to consider if any of the information supplied by you in this tender should not be disclosed because of its sensitivity, (other than that referred to at (i) above). If this is the case, you should, when providing the information, identify same and specify the reasons for its sensitivity. it will consult with you about sensitive information before making a decision on any Freedom of Information request received.		Item			
B	Please make a statement to the effect that information not identified as sensitive (in accordance with the foregoing) may be released in response to a request under the Freedom of Information Act.		Item			
	Personal Protective Equipment					
C	The Contractor is to ensure that sufficient supplies of personal protective equipment, e.g. safety helmets, boots and the like are available for the use of visiting Consultants to the site.		Item			
	Tender expenses					
D	The Employers do not bind themselves to accept the lowest or any tender and no Contractor will be remunerated for any trouble or expense incurred in the preparation of his tender.		Item			
	Tax clearance certificate					
E	It will be a condition for the award of this Contract that a firm must be able to produce promptly a tax clearance certificate (unless he has a sub-contractor's C2 certificate). In the case of a non-resident a statement from the Revenue Commissioners will be required.		Item			
F	Furthermore, it will be the responsibility of the successful Contractor to ensure that any sub-contractor employed by him on this Contract is in possession of either a bona-fide C2 certificate or a tax clearance certificate and to submit such certificate in each case for inspection by this office if required to do so. No claims for increased costs will be entertained in respect of Contractors compliance with this condition.		Item			
				To Collection €		

					€	c
	Setting Out					
A	The Contractor shall set out the Works and keep them correct. Opening up and excavation shall not be commenced until the Employer's Representative has inspected the setting out. The checking of any setting out or of any line or level by the Employer's Representative or the named representative (if any) shall not relieve the Contractor of his responsibility for the correctness thereof.		Item			
	Notice to Employer's Representative for Inspection					
B	Before laying drains, filling trenches, pouring reinforced concrete and otherwise proceeding with work that will cover and conceal previous work, the Contractor shall give early notice in writing to the Employer's Representative and shall afford him an opportunity of inspecting the previous work. Approvals given at such inspections will not relieve the Contractor for full responsibility for the quality of the work throughout.		Item			
	Commencement of Work					
C	Inform the Employer's Representative at least five working days before the proposed date for commencement of work on site		Item			
	Commencement Notice (if applicable)					
D	The Contractor is also required to ensure that a Commencement Notice, fully completed, has been submitted to the appropriate Local Authority, not less than 7 days and not more than 21 days before actual commencement on site. Such commencement can be defined as site enablement works. He shall liaise with the Employer's Representative in this matter, where applicable		Item			
E	The Employer's Representative will issue the Commencement Notice to the Local Authority after consultation with the contractor.		Item			
F	The contractor shall take for and compile a Schedule of dilapidation/photographic records in approved format prior to commencement of works on site		Item			
	Request for Certification of Substantial Completion					
G	Give the Employer's Representative at least three weeks notice of the anticipated dates of Substantial Completion of the works		Item			
				To Collection €		

					€	c
	Notice to the Quantity Surveyor					
A	Give reasonable notice to the Quantity Surveyor before covering up any work which the Quantity Surveyor may require to be measured		Item			
	Pipe course					
B	Pipe, cable and wire courses shall be laid out by the Contractor as early as practicable for approval by the Employer's Representative and laying or fixing shall not be commenced without such approval.		Item			
C	Existing pipe, cable or wire courses interfered with during the execution of the work shall be reinstated if, when and as required to the Engineer satisfaction.		Item			
	Employer's personnel					
D	Neither the appointment (under Clause 4.3.3 of the Conditions of Contract) nor the actions of a named representative, or other supervisory representative shall in any way affect the responsibility of the Contractor and such named representative/supervisory representative will have no power to authorize variations of any kind.		Item			
	Bond					
E	The Contractor shall obtain from an approved Company or Society registered within the state a Guarantee Bond for the due and proper completion of the Contract and shall pay all premiums and fees required for same. The amount of the Guarantee Bond shall cover a sum equal to 10% of the estimated total value of the work. This Guarantee Bond must be completed within FOURTEEN days of notice being given by the Architect that a Bond is required. No work may be commenced before the Bond is completed. If a delay in completing the Bond results in a delay in the signing of the Contract, the time for completion will not be extended as a result of such delay. The expiry date of the Bond is a minimum of Fifteen months after the date of the issue of the Certificate of Practical Completion. 10% (of contract sum) Performance Bond required for first 12months after substantial completion of project with 5% required for remaining 3months. If a Bond is not required the amount included in the tender for this item will be deducted to determine the Contract Sum. It is essential that the amount included for the Bond be shown separately (Amount to be included for Bond to be inserted in the Summary of the Bills of Quantities and Form of Tender).		Note			
F	Provide a competent Contracts Manager and General Foreman for the duration of the works and for all site management costs.		Item			
				To Collection €		

					€	c
	Superintendence					
A	The contractor shall give and provide all necessary personal superintendence during the execution of the Works and for as long thereafter as the Employer's Representative may consider necessary. It shall include person(s) with first class experience in re-furbishment and in new build.		Item			
	Workpeople					
B	None but fully qualified, experienced and competent workpeople shall be employed on the Works and the Contractor shall furnish such evidence as the Employers Representative may require as to the qualifications and competence of any work person. The Employers Representative shall have the power to have dismissed from site any work person who misconducts him/herself or who is incompetent or negligent. The Contractor shall be responsible for keeping all workpeople under his control and within the confines of the site.		Item			
C	Operatives will be required to carry out sample work on site to indicate their expertise. Acceptable operatives should be familiar with and able to handle materials specified and have competence in the various work procedures.		Item			
D	The Contractor, where circumstances dictate, will be required to provide additional training to operatives where their knowledge is lacking. Include for all costs in connection with same.		Item			
	Plant, tools and vehicles					
E	Provide all plant, tools, equipment and vehicles required for the execution of the work. Give the Employer's Representative each week a daily return of the number, type and capacity of all plant, excluding hand tools and scaffolding currently operating on the works.		Item			
F	bringing to site and removing on completion		Item			
G	maintaining on site for the duration of the works		Item			
	Removal of Plant					
H	Plant and scaffolding etc., shall not be removed until ordered by the Employer's Representative and when so ordered it shall be removed expeditiously.		Item			
				To Collection €		

					€	c
	Cranage					
A	The Main Contractor shall provide all cranage required. All costs associated with the provision of cranage shall be included in the Tender Sum. The Main Contractor shall be responsible for all temporary works associated with the provision of a crane and gaining access to the building. The Contractor shall include under this heading all costs associated with additional cranage as required upon examination under the Tender Documents. Special cranage requirements for Nominated Sub-Contractors are measured as special attendances within the Bill of Quantities.		Item			
B	Should the Contractor choose to use a tower Crane, it shall be located in a position, which meets the Employer's Representative approval. Additionally, the Contractor should liase with adjoining landowners and statutory authorities for permission to erect the crane(s) in a particular location. All issues of over-sailing and agreements, fees, etc., are deemed included in the Contractors price against this heading.		Item			
C	Should the Contractor choose to use a temporary hoist or hoists, it/they shall be located in location(s) to be agreed with the Employer`s Representative.		Item			
	Scaffolding					
D	The Contractor is required to give a written undertaking to the Employer's Representative that only qualified, experienced and competent Scaffolders will be employed upon the works. The Contractor must furnish the necessary evidence to the Employer's Representative prior to the carrying out of scaffolding works.		Item			
E	Provide as necessary all general scaffolding required for the execution of the works. Include for protective dust proof sheeting on all scaffolding. The scaffolding and the erection of same must comply with BS 5973 and all other associated construction regulations and the like.		Item			
	Site administration and security					
F	Provide for all necessary site administration and for safeguarding the works, materials and plant against damage and theft including providing all necessary watching and lighting for the security of the works and the protecting of the public.		Item			
				To Collection €		

					€	c
	Telecoms and others' Fittings or Equipment					
A	The Contractor will be held responsible for any damage caused through his want of proper care to any of the fittings, equipment or machinery installed by Telecoms Utilities or their agents.		Item			
	Access for Employer's Representative to Site and Workshops					
B	The Employer's Representative and any person authorised by him shall at all reasonable times have access to the Works and to the Site and to all workshops and places where work is being prepared or where materials, manufactured articles and machinery are being obtained for the Works, and the Contractor shall afford every facility for and every assistance in or in obtaining the right to such access.		Item			
	Site Records					
C	Provide for the provision and keeping of all statutory records.		Item			
D	Provide for maintaining a full set of site records of all labour, materials and plant used on the works to the approval of the Employer's Representative and a Record of Visitors to site and a daily weather record, recording minimum and maximum temperature and rainfall.		Item			
	Access for Others to site					
E	The Contractor shall if required allow access to the site and building for the staff of Utility Companies or others carrying out telephone and other installations and employed by or acting on behalf of the Employer. He shall also allow access to the Employer's personnel connected with this work.		Item			
	Access for Local Authority Officers to Site					
F	Should a recognised and responsible officer of a Local Authority desire to see the premises, buildings or documents, the Contractor shall refer him to the Employer's Representative.		Item			
	Transport for workpeople					
G	Provide for obtaining an adequate labour force for the works and include for transporting men and women to and from the site if necessary.		Item			
				To Collection €		

					€	c
	Protecting the works from inclement weather					
A	Protect the works, materials and plant from the weather and make good any damage caused.		Item			
	Water for the works					
B	Provide an adequate supply of clean fresh water for the works and pay all charges.		Item			
	Lighting and power for the works					
C	Provide all necessary temporary lighting and power for the works and pay all charges.		Item			
	Temporary roads, hardstandings, crossings and similar items					
D	Provide all necessary temporary access roads, tracks, hardstandings, crossings and the like and reinstate surfaces on completion. Obtain approval from the Architect's Representative for the location of temporary entrances, hardstandings and crossings required for the works. Comply with the requirements of the Local Authority regarding their maintenance and reinstatement.		Item			
	Temporary accommodation for the use of the Contractor					
E	Provide temporary sheds, offices, messrooms and sanitary accommodation required for own use and for the use of subcontractors. Comply with the requirements of the factories Acts. Make good and fully reinstate on completion all surfaces, vegetation, grassed areas, etc., disturbed or damaged by the Contractor's operations during the course of the works.		Item			
	Office for Clients Representative and Site Meetings					
F	Provide offices (20 m2 approx) for the Clients Representative, provide a table and chairs and as this office will also be used for meetings, connect services such as electrical and water and sewage, telephone and pay all charges in connection therewith, remove on completion.		Item			
	Toilet Facilities					
G	The Contractor is to provide temporary toilet facilities during the course of the works and these must be kept clean at all times and maintained in a proper manner.		Item			
				To Collection €		

					€	c
	Temporary telephones for use of Contractor					
A	Provide temporary telephone facilities for the Contractors own use and for the use of Sub-Contractors; pay all charges in connection therewith.		Item			
	Traffic regulations					
B	Ascertain and comply with Garda Regulations affecting the execution of the works.		Item			
	Maintenance of public and private roads and services					
C	The Contractor shall be responsible for all damage to existing roads, footpaths and carparks caused by his own or sub-contractors' or suppliers' transport to and from the site. Maintain the Employer's existing roads, carparks and footpaths during the Contract and make good any damage caused by site traffic or site operations. Protect all underground services encountered during the execution of the works. The Contractor shall make good any damage caused by his own, by sub-contractor's or by suppliers' operations.		Item			
D	Take adequate precautions to protect persons and property from damage or nuisance caused by water, smoke, dust, rubbish and otherwise. Public roads and paths in the vicinity of the site shall be maintained in a tidy condition for the duration of the contract.		Item			
	Protection of the works					
E	Allow for protecting the whole of the work during the duration of the Contract and clean down and leave perfect on completion. to the satisfaction of the Architect		Item			
	Special Protection					
	The Contractor is advised that special protection will be required for certain elements of the works. The precise method of protection is to be approved by the Engineer prior to commencement of the works. The elements requiring special protection are as follows:-					
F	1. E.S.B and other local authority ducting works		Item			
				To Collection €		

					€	c
	Protection Watching and Lighting					
A	The works shall be protected at all times against damage from inclement weather, impact, or any other cause and the Contractor shall provide waterproof and frost-proof coverings, temporary shelters, temporary drainage and any other necessary protection for this purpose. He shall provide also watching and lighting hoarding etc., necessary for the protection of the public and for the protection of the site and the Works against trespass and interference.		Item			
	Storage Sheds/Compounds					
B	Suitable for the use of workmen and the storage of materials shall be provided by the contractor, maintained during the progress of the works and removed on completion of the works. The contractor is to make good any damage caused at his own expense.		Item			
C	Stores for cement and plaster are to be watertight and are to have raised floors to the approval of the Employer's Representative		Item			
	<u>Health and Safety</u>					
	<u>Safety, health and welfare of workpeople</u>					
D	The Contractor shall include for complying with the Safety, Health and Welfare at Work Acts and Regulations current at date of tender.		Item			
E	The Contractor shall in respect of all person and site activities provide for and ensure compliance with all Safety, Health and Welfare Legislation in connection with the Works		Item			
F	The Contractor shall ensure safe practices and methods of work are adopted at all time. The Contractor in that capacity or in his capacity as Project Supervisor Construction Stage shall notify the Employer's Representative in writing prior to the submission of his tender if he considers any requirement relating to the time for carrying out the Works or any part of the Works or the design of the Works or specification of materials render work methods or procedures necessarily hazardous or in any way prevent the Works from being safely carried out. The Contractor shall bear all costs arising out of his failure to give notice of foreseeable matters in this regard.		Item			
				To Collection €		

					€	c
A	The Contractor shall be appointed by the Client under a collateral agreement to the main contract as Project Supervisor for the Construction Stage in respect of the project pursuant to the Safety Health and Welfare at Work (Construction) Regulations (Amendment) 2010. The Contractor shall include all costs for the provision of the services of Project Supervisor for the Construction Stage (PSCS) pursuant to Regulations 6 and 29 of the Regulations. All costs in this relation shall be inserted in the Form of Tender		Note			
B	The form of appointment of project supervisor for construction stage shall be as per the current model form issued by the Department of Finance for Public Works Construction Contracts		Item

	Contractor's Documents					
	Programme of operations					
A	The Contractor will, within one week of his tender acceptance submit without delay a properly prepared construction programme in a form to be approved by the Employer's Representative. The programme must clearly and explicitly set forth the sequence of all operations (including those of sub-contractors) and the time limits within which the Contractor proposes that each operation shall be commenced and completed. Upon production of the programme, the Contractor shall distribute copies of the programme to all members of the design team.		Item			
B	The Contractor must keep the construction programme up to date and make copies available to all members of the design team immediately prior to the site meetings. The programme must include, inter alia, actual activity durations against estimated durations together with particulars of labour, materials, plant resources and the like. Copies of the programme must be displayed in the various site offices.		Item			
				To Collection €		

					€	c
A	10.0 Programme: General. In addition to the requirements in Clause 4.9 (Programme) of the PW- CF1 Contract any programme submitted by the Contractor under Clause 4.9 (Programme) or 4.10 (Progress Reports) shall in addition to the requirements of this Contract Clause include: Programme to include highlighted critical path; link the Substantial Completion on the critical path for the Substantial Completion of the Works and which Sections are non-critical to same; clearly identify the programme contingency referred to in Clause 9.4.2 of the PW-CF1 Contract; clearly describe the preparation time for obtaining relevant Consents and permissions for making all services connections; Show the design, design compliance check, RCS (Received Contractors Submittals) submittal preparation time, RCS submittal date, time for response to RCS comments and requests for further information, element/material/equipment order time, element/material/equipment construction start time. This can be provided in the form of a register (excel format or similar as described below); be submitted in Microsoft Project (or Microsoft Project compatible), Asta Powerproject and PDF formats in a GANNT format; take account of all constraints included in the WR and the PW-CF1 Contract; Provide a monthly drone video recording Site progress of a minimum of 5 minutes including any works outside of the Areas Made Available by the Employer together with 30 Nr. still pictures; and The Contractor will be required to prepare and submit detailed testing & commissioning and steady state running programmes to the ER for review 6 months prior to the commencement of testing and commissioning activities on each Section. The Contractor shall maintain an up to date detailed programme/register (in excel format or similar) of all RCS to be submitted, actually submitted dates and current status to the ER for review on a weekly basis. The programme/ register shall include the proposed submission dates for the packages which shall include an eight week look ahead for upcoming RCS submissions.		Item			
	Online File Sharing Platform					
B	The Contractor is to provide and maintain a proven web-based collaborative Common Data Environment system, to be approved by the Employers Representative at Tender Stage. (Note: This should be a recognised, publicly available system and not the Contractors own in-house document management system). All as per Section 900 of Architects Preliminaries.		Item			
				To Collection €		

					€	c
	Method Statement					
A	The Contractor is required to submit with his tender a properly prepared method statement in a standard format. The method statement must clearly demonstrate the contractor's proposed sequence and method of working together with the planned resources required to execute the works.		Item			
	Safety Statement					
B	The Contractor, in accordance with Safety, Health and Welfare at Work Act 1989, is required to submit with his tender a copy of the company's Safety Statement.		Item			
	<u>Handover Documentation</u>					
C	The Contractor shall be required to include for an approved system of "key handover certificates" for electrical, mechanical, etc., for record purposes		Item			
	<u>All statutory obligations</u>					
D	The Contractor shall comply in all respects with all statutory obligations or regulations in carrying out the works.		Item			
	<u>Record Drawings</u>					
E	The tender sum will include for the provision of record drawings and manuals as specified to the Employer's Representative. Should the Contractor refuse or neglect to provide the record drawings and manuals the Employer may employ and pay other persons to provide such drawings and manuals and all costs incurred in connection therewith shall be recoverable from the Contractor or may be deducted from any money due or to become due to him, irrespective of the Contractor's tender price for same.		Item			
	<u>Protection</u>					
F	Provide for protecting the completed works from any damage whatsoever including providing, maintaining and subsequently removing any necessary protective casings or the like (including those required for each different floor covering) sufficient to leave the works clean, undamaged and fit for immediate occupation to the satisfaction of the Employer's Representative.		Item			
				To Collection €

	Destructive Testing At any stage on the contract or in the lead-up to Substantial Completion, the Employer, may at its discretion and without prejudice, request a full review and destructive testing of all fire safety elements of the building, including but not limited to passive fire stopping and live fire safety systems. The Tenderer is to include in their Tender bid, the Works associated with destructive testing required to be undertaken, in order for the reviews by the Employer's Personnel to take place. The Contractor is to include for the site personnel attendances during the destructive testing, carry-out required opening-up of areas for reviews to take place and making-good following completion. The areas requiring opening-up Works will be dictated by the Employer's Representative / Employer's Personnel. The Contractor is to include in their Tender bid for the following opening-up Works, making-good Works and site attendances before, during and after the Employer's Personnel reviews, in respect of the following:					
A	The Contractor, their Specialists and sub-contractors are to brief the Employer's Personnel in relation to the process undertaken to achieve compliance with the Part B of the Building Regulations and provide a copy of the installation log registers completed by the Contractor's sub-contractors responsible for fire safety;		Item			
B	Contractor to provide adequate and safe means of access to areas at high level for access and review by others;		Item			
C	Contractor to assist in removing and reinstating ceiling tiles (all types) where required by the Employer's Personnel;		Item			
D	Contractor is to include for opening-up and making-good 10 No. areas of plasterboard ceilings where required by the Employer's Personnel;		Item			
E	Contractor is to include for opening-up and making-good 10 No. areas of walls where required by the Employer's Personnel;		Item			
F	Contractor is to include for opening-up and making-good 10 No. areas of surface-mounted Electrical terminations (i.e. sockets, data points, switches, hold-open devices etc.);		Item			
G	Contractor is to include for opening-up and making-good 10 No. areas of electrical trunking/containment throughout the buildings where required by the Employer's Personnel;		Item			
				To Collection €		

					€	c
A	Contractor is to include for opening-up and making-good 10 No. areas of floor finishes where required by the Employer's Personnel;		Item			
B	Contractor is to include for opening-up and making-good 15 No. areas of the facade (external leaf) in firstopping locations where required by the Employer's Personnel;		Item			
C	The Contractor is advised where Defects are found during the above reviews and destructive testing, the Employer's Personnel may at their discretion, and without restriction, request further areas to be opened and reinstated at the cost of the Contractor.		Item			
	Dust Monitoring & Dust Control					
D	The Contractor shall make full provision for dust monitoring and dust control/management for the full duration of the works, at a level appropriate for the extent and location of the works, to the satisfaction of the ER and the Design Team PSDP. This shall include a) Installation, operation, and maintenance of dust monitoring equipment in accordance with Client Requirements, all relevant EPA Guidance and relevant Health and Safety Authority (HSA) requirements. b) Continuous monitoring of particulate matter at locations agreed with the ER, with results available for inspection at all times. c) Weekly co-ordination meetings with the ER d) Implementation of dust suppression and containment measures in line with infection prevention and control guidance for construction works. e) Contractor shall be responsible for Dust Management which, inter alia, will include damping down works, covering skips, hoovering, use of water on cutting tools etc. to best practice. f) Immediate corrective action where monitoring indicates exceedance of agreed limits or where works may impact patient, staff, or visitor safety. All associated equipment, labour, reporting, and mitigation measures (including multiple dust monitors in multiple locations relating to the scope and location of the works at any particular time) shall be deemed included within the Contractor's tendered price. For tendering purposes, Contractor is to provide a minimum 8 No. Dust Monitors for the duration of the works, including relocation of monitors as required, to appropriate locations as the works proceed.		Item			
	Environmental - Construction Impacts					
E	Tree felling and clearing of vegetation shall take place outside of the bird nesting season.					
				To Collection €		

					€	c
A	The Main Contractor shall ensure that any excavated material stockpiled on site during construction shall be held in a manner such as to ensure that no silt or run-off from these stockpiles enters any watercourse		Item			
B	The Main Contractor shall ensure that surface water from the development is free from herbicides, pesticides, fertilisers and other substances which could have a harmful effect on the environment.		Item			
C	For the course of the construction, a silt fence with a filter drain connected to the new network will also be constructed in compliance with CIRIA C532 - Control of water pollution from construction sites. The silt fence will prevent the movement of sediment from site and divert excess volumes of water in the event of heavy rainfall from entering neighbouring residential properties during construction. It will be lined with a suitable high strength geotextile fabric. Daily visual inspection of silt control will be carried out for the duration of the works. No earth works will be undertaken in prolonged heavy weather conditions.		Item			
	Lighting					
D	The light trespass into windows of residential properties shall be limited to a max of 10Ev (vertical luminance in lux) before 23:00 hours and 2Ev after 23:00 hours		Item

	Carefully take down entirely demolish avoiding damage to the adjacent historic fabric of remaining canvent building, and remove all debris off site to an approved recycling facility the following					
C	Allow for the removal off site of all remaining loose furniture, chairs, desks, shelving, kitchen equipment/cookers, rubbish etc. which remains within existing Convent Building.		Item			
D	Contractors attention is drawn to aspects of the demolition work in this contract which represent a Medium to High Risk with respect to the Safety Health and Welfare at Work (construction)b Regulations 1995		Note			
E	The following consists of demolition of attached buildings at isolated locations, together with removal of existing floor slab, grubbing up all foundations, foothpaths and disconnection of all services. Before commencement of these works the contractor must submit to the Architect / Engineer for their approval a Method Statement detailing the sequence / phasing of the works including commencement date and duration of the works. Tendering contracts will be deemed to have included in their rates for all works deemed neccessary in carrying out each work item to the entire satisfaction of the Architect / Engineer, and per Conservation Architect's Specification 2.11		Note			
F	Carefully demolish existing attached structure having flat roof structure size overall 15.815m long x 8.555m wide, basement to parapet wall level approx 7.00m high, composed of reinforced concrete / masonary walls, basement walls, windows, doors, M&E Fittings including sanitary ware, fitted furniture, internal concrete staircase, attached external canopy (5.50m x 4.00m x 3.00m high), include for hacking up concrete basement floor slab and hardcore sub base under, rising walls, reinforced concrete columns foundations, reinforced concrete suspended floor slab, grubbing up and sealing off exposed drainage etc. and disconnection of all over and underground services as required (Laundary Extension with Boiler House at Basement Level per Architects Drawings 110, 111, 150 & 151)		Item			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	Extra over for backfilling basement after demolition in selected imported graded gravel material per engineers specification, spread, levelled and compacted in 200mm thick layers on ground; in making up levels in separate layers. Granular Fill in accordance with SR21 Annex E. 2. >250mm	263	m3			
B	Ditto attached chapel structure having pitched slate roof structure size overall 17.36m long x 13.175m wide, Ground to ridge level approx 10.00m high, composed of concrete / masonary walls, windows, doors, M&E fitting, include for hacking up concrete floor slab and hardcore sub base under, rising walls, reinforced concrete columns foundations, grubbing up and sealing off exposed drainage etc. and disconnection of all over and underground services as required (Items to be salvaged taken elsewhwere) (Chapel extension per Architects Drawings 110, 111, 150 & 151)		Item			
C	Ditto attached structure having flat roof structure at roof level, size overall 3.80m long x 5.00m wide, convent roof level to structure roof level approx 3.00m high, Take down to main flat roof level, composed of concrete / masonary walls, windows, doors, M&E fitting, include for and disconnection of all services as required (Stair Access To Roof per Architects Drawings 113, 150 & 151)		Item			
D	Ditto attached external Chimney overall 1.8m long x 0.50m wide x 18.00m high over Basement to West Elevation of Convent, include for grubing up reinforced concrete foundations etc complete, (Item 07 per Architects Drawings 110 - 113, 150 & 151 and Specification C90/110D)		Item			
E	Ditto attached 3no. internal Chimneys varing widths x approx 15.00m high within Convent, include for grubing up reinforced concrete foundations, etc. complete, (Item 07 per Architects Drawings 110 - 113, 150 & 151 and Specification C90/110D)		Item			
F	Ope in concrete floor slab after removal existing chimney to be infilled with 200mm reinforced concrete slab on MD50 metal decking with A252 mesh. H10 bars to be dowelled into existing slab in decking troughs all per Engineer's drawing 02-03-DR-S-1004 (6 locations)	11	m2			
G	Remove existing flat roof finish to main convent roof, including all existing upstands, flashings, insulation, etc complete, expose existing concrete roof deck and leave ready to recieve new insulated roof finish (elsewhere measured), etc. complete, (Item 08 per Architects Drawings 113 and Specification C20/120E & Conservation Architect's Specification section 3.5)	258	m2			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	Ditto to 2no. smaller flat roof sections to rear of convent at lower level, all as before (Ditto)	50	m2			
B	Ditto to porch flat roof to front of convent at lower level, all as before (Ditto)	10	m2			
C	Carefully remove statue and plinth from parapet at high level. Include for all necessary repairs / repointing to parapet capping to match existing after removal of statue and plinth. (Item 09 per Architects Drawings 113 and Specification C90/150G & Conservation Architect's Specification section 3.9.1)		Item			
D	Carefully remove statue and plinth from porch roof. Include for all necessary repairs / repointing to capping to match existing after removal of statue and plinth. (Per Architects Drawings 150 and Specification C90/140A & Conservation Architect's Specification section 3.9.1)		Item			
	Items to be Salvaged					
	Prior to demolition of existing Chapel, the following items are to be carefully taken down and salvaged, all per Conservation Architect's Specification & Architectural Record Chapel & Sacristy Annex Documents & Architects Drawing 110 and Specification C20/511					
	Items to be carefully removed and transferred to the alternative accommodation agreed with the Local Authority in compliance with the planning condition. (Contractor to allow relocating to new location up to 3 hours drive distance from site)					
E	Chapel Altar		Item			
	Items to be carefully removed and made available for salvage to a reputable salvage merchant (Contractor to to provide details to the Design Team), all to be in compliance with the planning conditions.					
F	Stone Steps		Item			
G	Stone Reredos		Item			
H	Stained Glass Windows	10	No.

J	1,100mm wide x 1,500mm high	2	No			
K	900mm wide x 1,500mm high	2	No			
	Existing External Doorset With Skylight over, (Including associated Surrounds etc. complete, Approx. Size;					
L	1.100mm wide x 3,300mm high	1	No			
	Existing Internal Doorset, including associated frames, ironmonery etc. complete. Approx. Size;					
M	Single Doorset; 1.000mm wide x 2,200mm high	61	No			
N	Carefully remove Architraves associated with above. Approx. 30% to be salvaged to be restored and refixed, remaining to be disposed off site.	635	m			
	Refurbishment of Historic Timber Doorsets & Joinery					
P	A specialist heritage joiner with at least 7 years conservation expertise shall be employed to carry out this element of the work. Contractors to include for same in their rates		Note			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Refurbishment Of Internal Joinery including Doorsets, Skirtings, Picture Rails, Windows, Window Liners etc., all per Conservation Architects Specification 4.10 & Architect's Specification C90-190C					
	Joinery Rates to including for the following, all per Conservation Architect Spec. 3.10.1 & 4.10.3.					
A	All internal historic doors scheduled for retention shall be refurbished and repaired as required using traditional repair techniques		Note			
B	Door joinery shall be repaired in situ, unless approved otherwise by the Design Team.		Note			
C	Sand and clean back all joinery to assess and quantify repairs. Avoid stripping by immersion in caustic soda or other similar 'acid bath' treatments.		Note			
D	Existing hardware shall be carefully removed, retained and refurbished to working order, per spec. 4.10.4		Note			
E	Where timber decay is found the area shall be carefully repaired/replaced as necessary using traditional repair techniques. A policy of minimal intervention must be adopted at all times - avoid unnecessary trimming of original timber		Note			
F	Treat any areas affected by wood-boring insects or rot with an approved insecticide and preservative treatment.		Note			
G	Where necessary salvaged pitch pine shall be introduced to replace missing or damaged timbers		Note			
H	All replacement timber shall faithfully match existing		Note			
J	Bottom rails are vulnerable and here repairs must be durable and have sound mechanical fixings.		Note			
K	Small areas of decay may be built up with an appropriate two-pack systems		Note			
L	Prepare surfaces of existing timber doorsets, including sanding, removal of flaking paint, mouldings etc. and leave ready for new decoration (elsewhere measured), all as per Conservation Architects Specification 4.12.2		Note			
M	Early paint layers may contain lead. Lead-safe working practices shall be employed where early paint layers are present.		Note			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	Where panels are cracked and are to be retained remove dust and dirt using compressed air and a cloth with solvent. Using a syringe, glue the crack and clamp in position until secure. Re-fix mouldings as per existing		Note			
	Existing Internal Doorsets to be carefully taken down and securely stored and protected on site (per Conservation Architect's spec. 2.10.2), Include for upgrade works, treatments, and refitting. Include for removing existing ironmongery, reinstating Door leaf and frame, seals and leave ready for fitting of new ironmongery (elsewhere measured); Approx. Size;					
B	Single Doorset; 1,170mm wide x 2,100mm high	6	No			
C	Single Doorset; 1,135mm wide x 2,100mm high	3	No			
D	Single Doorset; 950mm wide x 2,100mm high	1	No

	Inner Face of External Wall					
B	> 300mm wide	1341	m2			
C	< 300mm wide	279	m			
	Face of Internal Wall (Isolated Locations)					
D	> 300mm wide	320	m2			
E	< 300mm wide	43	m			
	Carefully takedown existing ceilings and expose soffit of reinforced concrete floor / roof slab. Leave soffit ready to recieve new ceilings (elsewhere measured), Include for all necessary saw cutting etc. complete, all per Conservation Architect's specification					
	Ceilings					
F	> 300mm wide	788	m2			
	Carefully takeup existing floor finishes (Carpet / Vinyl / Timber) and leave concrete floor slabs ready to recieve new floor finishess (elsewhere measured). complete, all per Conservation Architect's specification					
	Floor Finishes (Skirtings taken elsewhere)					
G	> 300mm wide	811	m2			
	Repair works to existing 450mm deep one-way spanning reinforced concrete ribbed suspended floor slab all per Engineer's Drawing 02-01-DR-S-1002 and Specification					
H	Allow for localized repair of suspended slab with high strength Cementitious grout, where honeycombing of concrete exists	203	m2			
	Existing Services, include for fire stopping all opes left in floors / walls after removal of existing M&E Sevices, etc. complete all per Architect's drawings and Specification C20- 120B & 120D					
J	Strip out and remove all existing Electrical Wirings, Fittings, Electrical Fires, Lights, etc. complete		Item			
K	Strip out and remove all existing Mechanical Pipework, Fittings, Boilers etc. complete		Item			

To Collection €

	Description	Qty	Unit	Rate	€	c
	Removal of all Existing Sanitary Ware, include for disconnecting and sealing existing waste outlets					
A	WHB, including taps, wastes, etc.	24	No			
B	External WHB, including taps, wastes, etc.	1	No			
C	Bath, including taps, wastes, etc.	3	No			
D	Shower Tray, including, mixer, surrounds, curtains, wastes, etc.	3	No			
E	WC, including wastes, etc.	7	No			
F	Associated fixed bathroom fittings, inlcuding towel rails, toilet roll holders etc.		Item			
	Fittings					
G	Remove existing stair lift, serving ground to 2nd floor, including associated, rails, chair, fittings, controls, wiring, etc. complete. Include for any neccessary reinstatment to walls, floor stairs and leave ready for new finishes (elsewhere measured)		Item			
H	Remove existing Radiators. including associted pipework. Include for any neccessary reinstatment to walls, floor and leave ready for new finishes (elsewhere measured). All per Architect's Spec C20-120A	44	No			
	Furniture					
J	Remove existing kitchen furniture & equipment. Any openings left in walls and floors to be infilled with an appropriate sealant with 60min fire resistant properties as per fire strategy. All per Architect's Spec C20-120C (4no. locations)		Item			
	<u>Build up ope in existing external masonary wall, approx 550mm thick, after removal of window (elsewhere measured) include for cut tooth and bond to existing masonary all to the satisfaction of the Structural Engineer and Architect's Specification C90-110A</u>					
	Window Ope. Size;					
K	1,000mm wide x 2,000mm high	1	No			
L	1,150mm wide x 2,000mm high	3	No			
M	1,150mm wide x 1,600mm high	4	No			
N	850mm wide x 1,300mm high	3	No			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	850mm wide x 1,600mm high	2	No			
	Door Ope. Size;					
B	1,000mm wide x 2,400mm high	3	No			
	Build up ope in existing internal masonary wall, approx 400mm thick, after removal of window (elsewhere measured) include for cut tooth and bond to existing masonary all to the satisfaction of the Structural Engineer and Architect's Specification C90-110A					
	Door Ope. Size;					
C	1,000mm wide x 2,400mm high	30	No			
	Alteration Works Entrance Porch					
	Works to the projecting entrance porch, all per Conservation Architect's Specification 3.9 and Architect's Specification C90-110B					
D	Paint and coverings are removed from Porch Structure, including roof, parapet, coping, columns, ceiling and cornice to soffit, etc.		Item			
E	Allow for carefully taking down and replacement of 2m2 of existing soffit. Include for all necessary saw cutting etc. complete. New to match existing.		Item			
F	Remove existing roof finish and flashing, expose existing concrete deck and leave ready for new roof finish (elsewhere measured)	10	m3			
G	Stone steps to be refurbished in accordance with conservation best practice. Open joints to be repointed with lime base mortar. Allow for light cleaning of stone (e.g. Doff cleaning).		Item			
H	Repair and fill all existing cracks to columns, ceilings, cornicing, parapets, coping, etc. and leave ready for new decoration (elsewhere measured)		Item			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Terrazzo Repairs					
	Existing Terrazzo to entrance hall, corridor, and stair halls to be protected in the course of the works, with localized repairs all per Conservation Architect's Specification 4.2 and Architect's Specification C90-150A					
A	A masonry repair specialist with conservation experience must be engaged by the contractor to carry out the following works. Prior to commencing, trial finish panels for each type of repair required will be satisfactorily carried out for approval of the Conservation consultant and design team		Item			
B	Protect existing Terrazzo throughout the course of the works		Item			
C	Cleaning of existing terrazzo surfaces to remove dirt, stains, and contaminants	87	m2			
D	Repairing cracks, chips, and areas of delamination	77	m2			
E	Allow for Replacement of existing damaged Terrazzo sections, with new Terrazzo to match existing in numerous locations.	10	m2			
F	Application of a breathable sealant to protect and enhance the terrazzo's appearance.	87	m2			
	Ceilings					
	Existing Ceilings and Cornicing to be protected in the course of the works, with some areas of repair all per Conservation Architect's Specification 4.3 and Architect's Specification C90-150D					
G	A plaster specialist with conservation experience must be engaged by the contractor to carry out the following works.		Item			
H	Protect existing Ceilings and Cornicing throughout the course of the works	50	m2			
J	The plaster must be covered with hessian and allowed to dry out slowly over a period of three weeks. The drying temperature should be controlled and drying must not be forced by introducing excessive heating.	50	m2			
K	Wall paper and paint finishes should only be applied to fully dry plaster. Lime based paint, a lime wash or casein paint should be used as a decorative finish.	50	m2			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	2No. Existing Stairs					
	2no Existing Stairs to be protected in the course of the works, with some areas of repair all per Conservation Architect's Specification 4.13 and Architect's Specification C90-110E & 150B					
A	2no. existing staircases shall be protected from foot traffic for the duration of the works by provision of a layer of dry hessian, soft board and 13mm plywood sheeting with sufficient projection to avoid damage to the nosing. Handrails and balusters shall be encased ensuring no fixings attach to or place pressure on the historic fabric. Decorative finish to integral moulded capping of concrete balustrade to be carefully protected.		Item			
B	Concrete repairs: A masonry repair specialist with conservation experience must be engaged by the contractor to carry out the following works.		Item			
C	Cleaning of existing surfaces to remove dirt, stains, contaminants, and inappropriate or failed finishes.		Item			
D	Repairing of cracks, chips, and areas of damage with appropriate compatible repair mortar.		Item			
E	Application of a compatible sealant to protect and enhance the appearance of the decorative finish to the integral moulded capping of the concrete balustrade		Item			
F	Top flight of Stair 1 within the existing building is to be extended by 2no. additional treads to achieve the new FFL of raised access floor on third floor. Treads and risers should match dimensions of existing steps to ensure a compliance with TGD Part K & Part M.		Item			
G	Handrails & Balustrades should be extended and match the aesthetic of existing situation.		Item			
	Repair works to existing Rainwater Goods all per Conservation Architect's Specification 3.7 and Architect's Specification C20-120D					
H	Carefully take down all existing rainwater goods salvaging sound historic cast-iron elements for refurbishment and reuse. Sound historic cast-iron elements to match may be salvaged for reuse in repairs from areas of the convent that are scheduled for demolition		Item			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	Refurbishment and repainting of historic cast-iron rainwater goods shall be carried out using a proprietary, conservation-grade paint system suitable for ferrous metals, comprising primer, intermediate and finish coats, applied in accordance with the manufacturers instructions. Lead-safe working practices shall be employed where early paint layers are present		Item			
	Reinstall existing sound historic cast-iron rainwater goods to be re-fixed in the location of the original rainwater downpipes. include for fitting on spacers, all necessary fixings, seals etc. complete.					
B	Downpipes	122	m			
C	Bends	10	No			
D	Shoes	16	No			
E	Branches	13	No			
F	Hoppers	16	No			
	Extra over for replacing existing historic cast-iron rainwater goods with matching new cast iron rainwater goods. Include for all necessary fixings, seals, paintworks etc. complete.					
G	Downpipes	73	m			
H	Bends	6	No			
J	Shoes	10	No			
K	Branches	8	No			
L	Hoppers	10	No			
	Repair works to existing Bell Tower & Bell all per Conservation Architect's Specification 3.4 and Architect's Specification C90-200					
	All Masonary to Bell Tower (External and Internal Including Roof and Cross)					
M	Full rake and repoint with lime mortarl per Conservation Architect's Specification 3.16	81	m2			
N	Removal of leached deposits and light cleaning	81	m2			
P	Localised masonry repairs per specification 3.14	81	m2			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	Removal of all Staining to Masonry including those due to Non-Ferrous Metal Corrosion, all per Conservation Architect's Specification 3.4.2.2 & 3.15	81	m2			
	Bell					
B	Carefully take down bell for repairs and cleaning and refix after, all to the satisfaction of the Architect.		Item			
C	Allow for cleaning of bell including corrosion removal, all per Conservation Architect's Specification 3.4.2.2		Item			
D	Allow for replacement of existing timber beam, include for new bell fixings, including rods, bolts, etc complete. Securely fix new replacement beam in bell tower.		Item			
E	Replace existing bell rope with new matching bell rope		Item			
	Lightning Strips					
F	Existing lightning strips fixed to the bell tower. Allow for replacement of lightning strips and new non-metallic DC clips/fixings. Fixings to be, where possible, to existing locations to avoid damage to the fabric. Make good around new fixings.		Item			
	<u>Existing External Window / Door Heads</u>					
	Labour and material in carefully removing and disposing off site to a licensed tip existing lintel in external masonary wall; include for temporary propping as required to Engineers Approval. Supply and install 100 x 225mm deep precast concrete lintel to BS 8500-2 (exposure class XC3 and XC4) bedded in gauged mortar (1:1:6) and bearing 150mm either side of ope on Grade C28/35 concrete padstones; 75mm deep dry pack mortar between top of beam and underside of masonry wall. Inclusive of all associated saw cutting, reinstatment, installing new DPC, making good to existing masonary as necessary to match existing					
G	500mm wide external wall	70	m			
	<u>Repair works to existing Sills all per Conservation Architect's Specification 3.11</u>					
H	Remove paint from window sills	65	m			
J	Rake out and repoint any cracks and failed joints, leave ready to receive new decoration (elsewhere measured)	65	m			

To Collection €

	Description	Qty	Unit	Rate	€	c
A	Extra over last for replacing existing concrete sill & DPC etc. inclusive of disposal of existing off site to a licensed tip, carefully make good all round to match existing	65	m			
	Repair works to existing Parapet Coping all per Conservation Architect's Specification 3.6.1					
B	Remove paint from Coping	76	m			
C	Rake out and repoint all joints, leave ready to receive new decoration (elsewhere measured)	76	m			
D	Extra over for installing new lead capping over the existing coping stones, carefully detailed in accordance with best practice. Allow for new lead capping to the existing parapet footprint of structure scheduled to be retained. Lead wrapping to be fitted over coping and secured; Girth 600mm - 750mm	76	m			
E	Extra over for forming neat 90deg corners	14	No			
F	Ditto Ends	8	No			
	Wall Finishes Internally					
G	Allow for making good to existing internal retained plaster wall (after removal of services)		Item			
H	Allow for removal of existing paint to Internal walls prior to decoration	1385	m2			
J	Allow for repair of hairline cracks, prepare walls for painting (elsewhere measured)	1385	m2			
	Ceiling Finishes					
K	Allow for lightly cleaning, removal of flaking paint, filling in of hairline cracks and prepare existing ceiling all as per specification, leave ready for new decoration.	50	m2			
L	Ditto cornice		Item			
	Fireplace, all per Conservation Architect's Specification 4.14.1					
M	Allow for cleaning down and polishing existing fireplace including grout repair to tiles as required		Item			
N	Allow for replacing existing backing plate and reinstate fire inset		Item			

To Collection €

	Description	Qty	Unit	Rate	€	c
A	Allow for sealing existing chimney, all to the satisfaction of the Architect.		Item			
B	Remove existing stove, make good fireplace.		Item			
	Crack Stitching					
C	Allow for stitching crack in external masonary wall all per Engineer's Drawing	80	m			
D	Allow for stitching crack in internal masonary wall all per Engineer's Drawing	65	m			
	Chases					
	Holes; mortices, chases and the like for concealed electrical conduit, fittings & accessories on existing plastered masonary walls; make good to match existing in;					
E	150mm x 50mm rebated chase	78	No			
F	40mm x 50mm deep chase from high level; average chase length of 5.00m	78	No.			
G	Make good wall chases in existing plasterwork to match existing	54	m2			
	Form or cut existing concrete floor to trace existing services include for making good to match existing after instalation of services.					
	Overall;;					
H	4.00m long x 2.5m wide x 300mm deep	4	No.			
	Boxing out Vertical Drops					
	Boxing around services drops next to existing plastered masonary walls consisting of one layer of 12.5mm plasterboard to outer face. Fixing: as recommended by manufacturer. Finishing: Taped and skim coat plaster. Primer/ Sealer: 1 coat of Gyproc Drywall Primer or equivalent. Skim coat finish. Include for all necessary Metal beads/ stops recommended by board manufacturer for reinforcement of all external angles and edges Include also for all necessay softwood framework and insulation.					
J	200 x 200 x 3000mm high	20	No			
K	Ditto horizontally 200 x 200 x 3000mm long	20	No			
L	150 x 150 x 3000mm high vertical box outs	15	No

	(19) SUBSTRUCTURE					
	INFORMATION					
A	This element of the work has been measured from Structural Engineers Drawings together with Architects drawings as per the relevant drawing issue sheets		note			
B	The Contractor is advised that this Element and the Works Requirements are all complementary to each other and should be read in conjunction with one another		note			
C	For detailed description of workmanship and materials the contractor is referred to the works requirement document entitled "Concrete Specification" prepared by the Structural Engineer.		note			
D	For details of ground conditions refer to the Ground Investigation Report and Bore Hole Data included with the tender documentation		note			
E	For details of underground services refer to the Works Requirements		note			
F	Allow for probing the sub-strata prior to excavation to ascertain the exact nature of the sub-strata		Item			
G	Excavation through improted hardcore fill is to be carefully set aside and stored for re-use or spread and levelled on site where directed by the Engineer		note			
	Vibration Monitoring					
H	Contractors are to allow for all vibration monitoring of adjoining properties and adjoining site boundary walls during demolition and piling works and are to allow here or elsewhere within their tender all all costs associated wiht same all in strict accordance with Engineers Specification		Item			
	Main Contractors Temporary Works Design in structural supports to existing Covent Building					
J	Main Contractors will be required to demonstrate by means of Method Statement to the entire satisfaction of the Architect / Structural Engineer with his own Professional Temporary Works Design Engineer the safe buildability / verocity of his proposed temporary sturctural supports solution	1	Item			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Temporary Structural Supports to Existing Convent Building					
A	Contractors attention is drawn to their responsibility for maintaining the stability of existing buildings and structures all as per Preliminaries		note			
B	Allow for all temporary support work including supply, erection and later dismantling of any necessary structural steel support framework including all associated concrete pads, bolted / site welded connections, forming opes / pockets through existing concrete walls, permanent retainment to match existing on dismantling of same and all to satisfaction of Structural Engineers and Architect		Item			
	Underpinning Works					
	The following underpinning works to be carried out under existing 500mm thick masonry external wall to existing convent building. These works are to be carried out in consultation and agreement with the Clients Engineers and will be required to be carried out prior to other ground works in this area. These works are located at Grid Line 1 (A - E) per Engineers Drawings FN-DR-S-1000 & 2000 and Specification					
C	General Demolition Works to be carried out in this area is measured in the Demolitions element		note			
D	General bulk excavation works to be carried out to formation level as measured in Prepared Site Element		note			
E	Contractors attention is drawn to aspects of the underpinning works in this contract which represent a Medium to High Risk with respect to the Safety Health and Welfare at Work (Construction) (Amendment) Regulations 2010		note			
F	The following consists of underpinning works to existing foundations under 500mm thick masonry walls to Convent Building as described. Before commencement of these works the contractor must submit to the Architectc / Engineer for their approval a Method Statement detailing the sequence / phasing of the works including commencement date and duration of the works		note			
G	The following work consists of underpinning of existing structures. This work is to be supervised and directed by the Structural Engineer and before commencement the Main Contractor will be required to agree sequence of demolitions etc. with the Structural Engineer		note			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	Tendering contractors will be deemed to have included in their rates for all works deemed necessary in carrying out each work item to the entire satisfaction of the Architect / Engineer. All rates, where applicable, shall include for necessary making good to finishes disturbed.		note			
B	The Contractors should note that the excavation works in underpinning existing 500mm thick masonary walls are to be carried out in strict accordance with Punch Consulting Engineers Specification / Criterion specifically with regard to vibration and monitoring of entire structure and are to allow here or elsewhere within their tender for all costs associated with same.		Item			
C	Proposed C32/40 mass fill concrete underpinning to existing stone wall foundations to be installed sequentially to prevent undermining of existing wall foundations. Contractors to include in their rates for underpinning to be installed in 1m sections in hit & miss manner, all to the satisfaction of the Structural Engineer.		Item			
D	Underpinning; Proposed C32/40 mass fill concrete underpinning to existing stone wall foundations to be installed sequentially to prevent undermining of existing wall foundations. Underpinning to be installed in 1m sections in hit & miss manner, all as per Engineers Drawing & Specification	14	m			
E	Carefully break out as necessary existing reinforced concrete foundations	14	m			
	Excavation under existing structures; include for all necessary hand digging all as per Engineers Drawings FN-DR-S-1000 & 2000					
F	Maximum depth; 2.00 - 4.00m	69	m3			
	<u>Disposal</u>					
	Keeping the surface of the site and excavations free of					
G	Surface water		Item			
H	Ground water		Item			
	Excavated material					
J	Off site	69	m3			

To Collection €

	BRICKWORK AND BLOCKWORK: Ancillaries to Brickwork / Blockwork					
	Forming cavities					
	Full fill cavity insulation to external cavity wall; 150mm wide cavity; WALL TIES: Double triangle type or other equal or equivalent stainless steel wall ties complying with IS EN 845-1:2013 at 450mm centres vertically and 450mm centres horizontally; include for keeping cavity clear of mortar droppings; INSULATION: 150mm thick insulation PIR board, product to have BBA Certification, and to be certified to BS EN ISO 9001 Quality Management System, and to BS EN ISO 14001 Environmental Management System. Manufactured to EN 13165, including corner boards and ancillary detail components, comprising a rigid Polyisocyanurate (PIR) core between low emissivity foil facings with engineered HIPS outer skin. The CT/PIR 150mm with a Agrement declared Lambda value of 0.021 W/mK to achieve a U value of 0.13W/m2K for the wall element; Fire class F, all in accordance with the Works Requirements and in particular Structural Engineers particluar specification for blockwork and Architects specification clause F30/150A					
	Between new walls					
A	150mm wide	10	m2			
	Insulation					
	Below slab insulation. to BS EN13165 on Sand Blinding and Gas Resistant Membrane (elsewhere measured). Manufacturer: Unilin XT/PR_UF - Polyisocyanurate (PIR) or equivalent approved insulation for ground supported and suspended floors. Thermal Conductivity: 0.022 W/m-K. Thickness - 100mm and as required to achieve an overall U-Value of 0.15W/m2K for the floor assembly. Compressive Strength: 140kPa. Fire Performance: Euroclass F. Additional Requirements: Fixing: Fit tightly with joints butted, staggered and laid to break bond pattern with no gaps in accordance with manufacturer's written instructions; all in accordance with the Works Requirements and Architects specification clause P10/219					
	Thermal					
B	150mm thick	80	m2			

To Collection €

	Description	Qty	Unit	Rate	€	c
	Extruded polystyrene (XPS) insulation. Product certification: New Item: REFER TO SECTION J42/415 - Extruded polystyrene (XPS) insulation. Manufacturer: Kingspan OR Equivalent. Product reference: Greenguard XPS OR Equivalent. Thickness (nominal): To suit full fill cavity, Perimeter of vertical substructure as indicated on Architect's 300 Series drawings. Compressive strength: 300 kPa at 10% compression. - or as specified by Structural Engineers drawings and specification. Thermal conductivity: 0.036 W/(mK). Additional requirements: Water Vapour Resistivity: The boards achieve a resistivity greater than 825 MN.s/g.m, when tested in accordance with EN 12086: 1997. The insulation core of the board to be resistant to attack by mould and microbial growth and not to provide any food value to vermin. Manufactured with a rebated edge. Manufacturer certified to BS / I.S. EN ISO 9001: 2008. All in accordance with manufacturer's written instructions; all in accordance with the Works Requirements and Architects specification clause F30/150A					
A	150mm fixed vertically behind R.C. Lift Pit Walls (elsewhere measured)	9	m2			
B	Ditto; fixed vertically to face of Blockwork Rising walls (elsewhere measured)	66	m2			
C	Ditto within Existing Building	5	m2			
	Insulation (for U/F heating)					
	Floor insulation boards; Polyisocyanurate core between low emissivity foil facings. Total floor U-value max.= 0.035W/ mK. Installed in accordance with the manufacturers written instructions, all as per the Architects specification					
	Thermal					
D	20mm thick	80	m2

	Roofing, Cladding and Waterproofing					
	Radon Barrier					
	Waterproofing/ damp-proofing/ gas-retardant membrane Under slab. To IS EN 15814 + Agrement-certified. Number of layers: As per manufacturers guidelines. Thickness/ gauge: As per manufacturers guidelines. Bonding: Horizontal surfaces loose-laid; vertical surfaces spot-bonded with adhesive. Surfaces to be joined: Clean and dry beyond the full width of the joint. Laps (minimum): Side and end laps, 300 mm with double row tapes - unless otherwise specificed by manufacturer guidelines and Agrement certificate. Sealing: As per manufacturers guidelines and Agrement certificate. Properties: Tensile strength: >600N/50mm. Tear Resistance: >425N. Elongation: <19%. Moisture Vapour Transmission: <0.2 g/m2/day. Water Vapour Resistance: >1024MNsg-1. Radon Gas Transmittance: 17x10-9 m/s-1. Radon Gas Permeability: 7 x 10-12 m2/s. All in accordance with the Works Requirements and Architects specification clause J40/297/A; Seal at joints to architects specification with 150mm laps with adhesive recommended by manufacturer sealed at joints with in accordance with the manufacturer's written instructions					
	Radon Barrier					
	Width > 300mm					
A	Horizontal	80	m2			
	Width < 300mm					
B	Vertical (sealed to face of existing building per Architect's detail 02/300	28	m			
	DPC / Cavity Trays					
	Gas resistant DPCs / Cavity tray; Product to have Agrement Certification, and to meet the following performance characteristics; Material Type: Virgin blend LDPE; Thickness: 500 microns; Radon Permeability: 7.9 x 10-12 m2/ s; Tensile strength >350N/50mm; Weight: 460 g/m2; Tear Resistance >200N; MVTR : <0.3 g/m2/day; all in accordance with the Works Requirements and Architects specification clause J40/140A; Seal at joints to architects specification F30 /360A with 150mm laps fully bonded with adhesive recommended by dpc manufacturer and sealed at joints with in accordance with the manufacturer's written instructions					
C	Width < or = 225mm; horizontal	35	m			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	Width >225mm; To base of blockwork cavity and dressed up, over and down 225mm high blockwork as per architects drawing 337/E/001 ref Radon DPC (1) (overall girth approx.1025mm); fully bonded and sealed to horizontal radon barrier all as before described	20	m2			
B	Extra over for sealed tape in fixing to blockwork	35	m			
	"Monarflex radon resisting membrane RMB 400" top hat units with clips; fully bonded and sealed at joints in accordance with the manufacturer's printed instructions					
	Collars around pipes, standards and the like					
	Diameter					
C	< or = 50mm	10	No			
D	< or = 110mm	5	No

A	Sump & Sump Cap-Link	2	nr			
	Tanking					
	Tanking to Lift Walls / Base					
	Tanking - Liquid Product. Prepare and apply GCP Applied Technologies, BITUTHENE LM (E) or equivalent. Material: Bitumen solution. Application temperature: 5-40?. Moisture vapour transmission rate: <2.0 g/m/24 hours. Elongation: 250%. Adhesion to concrete: 880 N/m. Description: A two-component elastomeric liquid applied detailing compound for use with GCP Applied Technologies waterproof membranes for use with 297 B and 290 C as part of an overall waterproofing system, to concrete surfaces, include for wrapping around corners all in accordance with the manufacturers instructions and Architect's Specification J40 297D and Drawing 301					
B	To base of lift pit wall, per Architect's drawing 301, include for all necessary angle fillets etc. complete.		Item			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Specialist designed pre-applied waterproof membrane composite sheet. Manufacturer: GCP Applied Technologies or equivalent. High-density polyethylene (HDPE). Third-party certification: BBA Agrement Certificate. Physical properties. Dimensions Width (minimum): 1.17 m. Roll length (minimum): 31 m. Sealant tape:. Adhesion to concrete: 2.88 N/mm. Shear Strength: 14.5 N/mm. Hydrostatic resistance: >70 m. Puncture resistance: 990 N. Third-party certification: NSAI Agrement Certificate. Thickness (minimum): 0.8 mm. Shear Strength: 14.5 N/mm. Hydrostatic resistance: >70 m. Puncture resistance: 445 N. Standard: To IS EN 15814 + Agrement-certified. Joints Surfaces to be joined: Clean and dry beyond the full width of the joint. Laps (minimum): Side and end laps, 300 mm with double row tapes - unless otherwise specified by manufacturer guidelines and Agrement certificate. Sealing: As per manufacturers guidelines and Agrement certificate, all in accordance with the manufacturers instructions and Architect's Specification J40 297B					
	To base of lift pit wall, per Architect's drawing 301, include for all necessary angle fillets etc. complete.					
A	Girth > 300mm girth	7	m2			

	Description	Qty	Unit	Rate	€	c
	Post applied Tanking to concrete walls. Description: Specialist designed post-applied waterproof membrane composite sheet for tanking. To be used in conjunction with clause 297/B as required by specialist design proposal. GCP Applied Technologies Bituthene 8000 or equivalent membrane. Third-party certification: NSAI Agrement Certificate. Gas resistant, damp-proof and waterproof membrane. Carrier material: High-density polyethylene (HDPE). Primer: Bituthene Primer S2, or equivalent Number of layers: As per manufacturers guidelines. Thickness/ gauge: 1.5mm. Weight:: 1.49 kg/m2. Water Vapour Transmission: To EN 1931, 105.000 +/- 30% ?= sD/d. watertightness: To EN 1928, at 60 kPa: pass. Static Load Resistance: To EN 12730, ?20: pass. Tensile Strength: To EN 12311-2, ?180 N/50 mm (longitudinal); ?180 N/50 mm (transversal). Reaction to Fire: To EN 13501-1, Class E. Joints Surfaces to be joined: Properly seal all joints with waterstop, joint filler and sealant as required. Bituthene membranes are not intended to function as the primary joint seal. Allow sealants to fully cure. Pre-stril all slab and wall cracks over 1/16 in (1.5mm) wide and all construction and control joints with 9in (230mm) wide sheet membrane strip. Laps (minimum): Side and end laps, 50mm at sides and ends, unless otherwise specified by manufacturer guidelines and Agrement certificate. Sealing: As per manufacturers guidelines and Agrement certificate. Application temperature: -5C to +20C include for wrapping around corners all in accordance with the manufacturers instructions and Architect's Specification J40 297C and Drawing 301 To Lift Pit Wall, per Architect's drawing 301, include for all necessary angle fillets etc. complete.					
A	Girth > 300mm girth	18	m2			

	Description	Qty	Unit	Rate	€	c
	Tanking to Existing Masonary Rising Walls					
	Historic masonry walls. Description: Waterproofing tanking plaster to be applied to base of historic walls (Convent). Manufacturer: Diasen or Equivalent. Product reference: Watstop (A+B+C). CE (EN 1504-2) marked product. Third-party certification: NSAI Agrement Certificate. Material. Epoxy cement waterproofing (water barrier). New Item: Solvent Free. Substrate: Existing historic masonry walls - Use Diathonite Regularization material if surface is very uneven. Application temperature: +5C. Coats: At least 2 coats until the yield specified is achieved. Other requirements: To be applied in accordance with manufacturer's recommendations, include for wrapping around corners all in accordance with the manufacturers instructions and Architect's Specification J40 297F and Drawing 300					
	To Existing Rising Wall, per Architect's drawing 300, include for all necessary angle fillets etc. complete.					
A	Girth > 300mm girth	70	m2			
	Extra over for					
B	Excavating and exposing external face of existing masonary rising walls, clean down and leave face of rising wall ready to receive tanking, (elswhere measured), approx 700mm wide to perimeter of existing Convent building.	99	m			
	Drainage Channels					
	Drainage channel system with 100mm wide grating; Product to conform to the following performance criteria: CE marked and fully certified to Load Class B125 per BS EN 1433:2002; Channel drain system with stainless steel edge rail.; Fall Constant invert; Overall Depth: 100mm; Grating: Ductile iron with high heel protection; Loading grade to BS EN 124: Load class B125; Other requirements: Including all accessories as required per manufacturer's best practice installation - sumps, end caps etc. bedded in haunched concrete overal size 170 x 150mm high including all nessessary formork; all in accordance with the manufacturers instructions and Architects specification and architects drawing					
	Including all drain unions, ends, outlets etc.					
C	overall length 1150mm	3	nr			
D	overall length 2000mm	1	nr			
				To Collection €

(19) SUBSTRUCTURE **Carried to Summary**					

	Description	Qty	Unit	Rate	€	c
	(21) EXTERNAL WALLS					
	INFORMATION					
A	This element of the work has been measured from Architects Drawings, Engineers drawings 244110-PUNCH-02-FN-DR-S-1000 to 1005, 2000 to 2002, 3000 to 3002 and 4000		Note			
B	The Engineers and Architects drawings and specifications are all complementary to each other and should be read in conjunction with one another		Note			
C	The Contractor is advised that the Works Requirements and Pricing Documents are all complementary to each other and should be read in conjunction with one another		Note			
D	For detailed description of workmanship and materials see specification		Note			
E	The tenderers should examine the Architects and Engineers drawings and specifications and satisfy themselves as to the nature and extent of the works outlined below and should include for all costs in connection with same.		Note			
	CONCRETE WORK: Precast Concrete					
	Precast concrete units; Contractors choice to submit for approval; Components manufacturer's 'proprietary' concrete; to B.S. 8500-2; building into existing masonary walls, ainclude for all necessary reinstatement, bedding in gauged mortar (1:1:6); as per Engineers specification and Architects detail 02 & 05 in drawings 314 and specification					
	Cills smooth finish; 180mm deep x 80mm high, lengths as per window / door opes with each side to be stepped into reveal; Include for wrapping with all necessary polyethene DPC damp proof courses and / or cavity trays to BS6515. Include for all neccesary insulation, concrete backing etc complete, all as per Architects drawings & specification					
F	Door Threhold 1,100mm wide	1	No			
G	Door Threhold 1,600mm wide	2	No			
	IN-SITU CONCRETE					
	In-situ concrete; designed concrete mix to IS EN 206-1; compressive strength class C30/37; reinforced and vibrated; all in accordance with the Works Requirements and the Structural Engineers specification for concrete					
	Walls					
H	>150mm thick: reinforced	21	m3			

To Collection €

	Description	Qty	Unit	Rate	€	c
A	Extra over for building off top of existing masonary external wall at roof level. Include for preparing top of existing masononary wall to take reinforced concrete wall	3	m			
B	Extra over for casting edge of new reinforced concrete wall up against face of existing external masonary wall. Include for tying into existing masonary wall and for weither tight expansion joint, all to the satisfaction of the Structural Engineer.	23	m			
	REINFORCEMENT					
	Reinforcement bars, to engineer's specification					
	Bar:Straight or bent					
C	nominal size < 12mm	2.1	tonne			
D	nominal size 12 - 25mm	2.1	tonne			
	FORMWORK					
	Wrot formwork as described to Engineer's specification to :-					
	Kickers to:-					
E	Walls	9	m			
	Walls					
F	Vertical > 4.00m high	208	m2			
	Edges of openings					
	Walls					
G	Area of opening not exceeding 1.00m2	2	no			
H	Area of opening 1.00 - 5.00m2	1	no			
	Sundries					
J	Allow for casting in 100mm diameter sleeves through 215mm thick concrete walls for incoming services	4	no			
	Bonding to Other Work					
K	Form Neat Weathertight connection to face of existing masonary wall. Include for all necessary, seals, ties, expansion, etc. complete all to the satisfaction of the Structural Engineer and Architect (2 locations)	26	m			

To Collection €

	Description	Qty	Unit	Rate	€	c
	BLOCKWORK & BRICKWORK					
	Brickwork					
	Clay facing brickwork Type A - 'White Brick'. Handmade, fired clay, facing brick with sanded finish. Vandersanden or equivalent, Lima 124A0 or equivalent bricks: to IS EN 771-1. Bricks to be cut on site as required to site brickwork setting out on architectural drawings. Mortar: Lime mortar as section Z21 to IS EN 998-2. Mix: Moderately hydraulic HLM3.5. Bond: Half lap stretcher, Joints Flush. All per Architect's Specification F10-110A					
	Walls					
A	100mm thick	119	m2			
	Labour on Brickwork					
B	Generally		Item			
	Blockwork					
	Concrete blocks; to be category 1 group 1 and to EN 772-1; compressive strength 13.5 N/Sqmm; 440 x 215 x 100mm nominal size; in mortar (1:1:6) min. strength M4; laid stretcher bond; all as per Architects and Engineers Specification					
	Parapet Walls					
C	100mm thick blockwork built off existing masonary wall after demolition of section of existing parapet wall. Include for preparing top of existing wall to recieve new blockwork parapet. All per Architect's drawing 310	52	m2			
D	225mm thick upstand at lift shaft roof level	4	m2			
	Extra over for THERMAL BLOCKWORK; Autoclaved aerated concrete blocks to BS EN 771-4; compressive strength 13.5N/ mm2 category I; Thermal conductivity (max) 0.19W/mK; 440 x 100 x 215mm nominal size; Fire rating to BS EN 13501-1; in mortar 1:1:5 or 6 mixture of Cem 1; strenght class M4 to BS EN 998-2; laid in half lap stretcher bond with neat flush pointing as the work proceeds; all as per Architects Specification and Engineers Specification					
	100mm thick					
E	<300mm wide	9	m2			
	215mm thick					
F	<300mm wide	3	m2			

To Collection €

	Description	Qty	Unit	Rate	€	c
	Labour on Blockwork					
A	Generally		Item			
	Bonding to Other Work per Engineer's drawing 4012					
B	100mm brickwork tied to face of existing external masonary wall of existing building, Include for all necessary preparing existing wall to recieve new brickwork wall, and also for any necessary reinstatement after. All to the satisfaction of the Engineer and Architect.	26	m			
C	215mm blockwork tied to existing external masonary wall of existing building, Include for all necessary preparing existing wall to recieve new blockwork wall, and also for any necessary reinstatement after. All to the satisfaction of the Engineer and Architect	3	m			
	Bedjoint Reinforcement					
	Provide 3 courses of GBF 35 W60 SC brickforce (or equivalent) reinforcing to horizontal bed joints directly above ope. Extend minimum 750 beyond ope size, all per Engineer's Specification, to;					
D	100mm brickwork	3	m			
	Weep Holes					
	Supply and fit Perpend joint plastics weep holes; Beak weep with reduced front section (beak shaped), transparent, all per Architect's specification and drawings					
E	Fitted through outer leaf immediately above base of cavity, at cavity trays, stepped dpcs, and external openings. 75 mm above top of concrete fill at base of cavity. Spacing (maximum): At not greater than 900 mm centres and not less than two over each opening.	15	m			
	Forming cavities; All Caviity Walls to be tied using suitable S/S wall ties. Ties shall be bedded into the bed joint of brick leaf by not less than 50mm, and shall be spaced in accordance with BS EN 845: Part 1, BS EN 1996 and BS 8000: Part 3. Additional ties shall be provided to sides of openings in accordance with BS EN 1996, as per Engineers & Architect's drawings and Specifications					
	Forming cavities; between new Reinforced Concrete Inner Leaf and Brickwork Outer leaf					
F	150mm wide	115	m2			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Forming cavities; between new Blockwork Inner Leaf and Brickwork Outer leaf					
A	150mm wide	4	m2			
	Forming cavities; between new Blockwork Outer Leaf and Studwall Wall Inner leaf					
B	70mm wide	52	m2			
	Cavity wall insulation. Polyisocyanurate (PIR) foam boards - Partial Fill. Unilin Insulation UK Limited, Thin-R XT/CW (T& G) (1200 x 450 x 100 mm) or Equivalent. To BS EN 13165. Fire performance: Euroclass F. Thermal conductivity (maximum): 0.022 W/m2K. Compressive strength at 10% deformation: >120 KPa. To achieve U-value: : 0.17W/m2K. Composite foil facing. Secure against face of inner leaf. Residual cavity: Clear and unobstructed. All per Architect's drawings and Specification F30-155A					
	To cavity between new Reinforced Concrete Inner Leaf and Brickwork Outer leaf					
C	100mm thick to 150mm wide Cavity	119	m2			
	Extruded polystyrene (XPS) insulation. Product certification: New Item: REFER TO SECTION J42/415 - Extruded polystyrene (XPS) insulation. Manufacturer: Kingspan OR Equivalent. Product reference: Greenguard XPS OR Equivalent. Thickness (nominal): -To suit full fill cavity. Compressive strength: 300 kPa at 10% compression. - OR as specified by Structural Engineers drawings and specification. Thermal conductivity: 0.036 W/(mK). Additional requirements: -Water Vapour Resistivity: The boards achieve a resistivity greater than 825 MN.s/g.m, when tested in accordance with EN 12086: 1997, -The insulation core of the board to be resistant to attack by mould and microbial growth and not to provide any food value to vermin. -Manufactured with a rebated edge, -Manufacturer certified to BS / I.S. EN ISO 9001: 2008. All per Architect's drawing 310 and Specification F30-150A					
	To cavity between new Blockwork Outer Leaf and Studwall Wall Inner leaf					
D	75mm thick 75mm wide Cavity	52	m2			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Horizontal Cavity Closer					
	FPS-911 Rockwool FirePro SP ref SP60 or equivalent Firestop System. Fire rating: 60 minutes. Fixing: Reference SP brackets, Size will fit edge slab to look like panel 100mm thick mineral wool. All in accordance with Manufacturer's Recommendations and all per Architect's Drawings & Specification.					
A	To 150mm wide Cavity, at perimeter of floor slabs and slab Perimeter	22	m			
	Copolymer thermoplastic DPC damp proof courses and / or cavity trays, all per Architects specifications F30					
	Girth > 300mm					
B	Horizontal	5	m2			
	Parapet Capping					
C	Carefully take from store, hoist and bed in position at top of new blockwork parapet wall, existing altered concrete coping, bedded, jointed and pointed all round, include for all necessary fixings, jointing, DPCs etc complete; all as per Architects Drawing 310 and Specification and Conservation Artchitect's Specification.	38	m			
D	Ends	2	No			
E	Mitres / Corners	2	No			
	Extra Over for;					
F	Disposing off site of existing concrete coping and supply and fit new reinforced concrete coping to match existing, all to the satisfaction of the Conservation Architect	38	m			
	Light Steel Framing System (External Wall to Roof Extension)					
G	Contractors to include for Specialist firestopping Design required for the 3rd floor of the convent building to achieve the required fire performance of all elements as shown on the Fire Certificate drawings (refer Background Information) This floor is an SFS wall system with steel structure. In particular - specialist design is required for the wall partitions meeting the underside of the roof all per Architect's Specification P12/165		Item			

	Description	Qty	Unit	Rate	€	c
	Specialist sub-contactor design required for light steel framing system used as infill to primary and secondary structural framing design by the Structural Engineer. To ensure compliance with TGD part A and all relevant standards outlined in Structural Engineers Drawings and Specifications. Stud and track system. Maximum stud depth: 146mm. External finish system: EWI system as specified in clause M21/210 - note thickness of insulation is 130mm. Insulation: Overall system to achieve U-Value of 0.17W/m2K. Thickness of insulation in EWI system is 130mm mineral wool with 100mm PIR Insulation between studs with and including 40mm lining over studs. Submit proposals, product and thermal conductivity to achieve overall U-Value of system. Include methods of fixing frames to the main building structure and means of achieving stability, as necessary. Include also for Plywood overlay: 18mm plywood overlay to structural frame with treated timber grounds fixed within web of steel columns (elsewhere measured) all as shown on architectural drawings and Vapour Control Layer: As per P10 - location as shown on architectural drawings. Include for all necessary fixings, air tightness tape to parmeter and opes, etc. complete, all per Architect's drawings and Specification G10-150.					
A	3350mm high (Includes Parapet)	36	m			
	Extra Over for;					
B	Forming abutments to other finishes	2	No			
C	Angles to Partitions	3	No			
D	Forming circular Window opes 885mm diameter	5	No			
E	Extra over last for 1 layer 15mm thick plywood backing board to reveals of Circular windows	14	m			
	Extra over for;					
F	Breather and waterproofing membranes to achieve the specified performance	119	m2			
G	Suitable Airtightness / Weather resistant Membrance complete, fixed to face stud wall	119	m2			
H	Linings to inner face of stud wall: One layer 12.5 mm plasterboard as clause 404. - Unless otherwise recommended by board manufacturer to meet specified performance. Finishing: Skim coat plaster as clause 680. Primer/ Sealer: Primer to painted areas. Accessories: Beads/ stops as recommended by board manufacturer.	99	m2			
J	Ditto < 300mm wide reveals to Circular Windows approx. 900mm diameter	15	m			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Stud Wall System (External Wall to Ground Floor)					
	Treated Timber studs, head & sole plate 120 x 44mm, faced both sides 18mm marine grade plywood include for insulation to cavities Insulation: Overall system to achieve U-Value of 0.17W/m2K. Thickness of insulation is 120mm PIR insulation, between studs with and including 40mm lining over studs. Submit proposals, product and thermal conductivity to achieve overall U-Value of system. Include methods of fixing frames to the main building structure and means of achieving stability, as necessary. Include also for Plywood overlay: 18mm plywood overlay to structural frame with treated timber grounds fixed within web of steel columns (elsewhere measured), all as shown on architectural drawings and Vapour Control Layer: As per P10 - location as shown on architectural drawings. Include for all necessary fixings, air tightness tape to parmeter and opes, etc. complete, all per Architect's drawing 317 and Specification					
A	3650mm high (Includes Parapet)	15	m			
	Extra Over for;					
B	Forming abutments to other finishes	2	No			
C	Angles to Partitions	2	No			
D	Forming Door Screen opes 6,200mm wide x 3,000mm high	2	No			
	Extra over for;					
E	Breather and waterproofing membranes to achieve the specified performance per Architect's Spec. H21/130	15	m2			
F	Suitable Airtightness / Weather resistant Membrance complete, fixed to Inner face stud wall per Architect's Spec. H31/261	15	m2			
G	Linings to inner face of stud wall: One layer 12.5 mm plasterboard as clause 404. - Unless otherwise recommended by board manufacturer to meet specified performance. Finishing: Skim coat plaster as clause 680. Primer/ Sealer: Primer to painted areas. Accessories: Beads/ stops as recommended by board manufacturer.	9	m2			
H	Ditto < 300mm wide reveals	25	m			
	Testing, Surveys, Samples & Warranties					
	Include for all testing, surveys, samples & warranty requirements as set out in the Architects works requirements					
J	Testing		Item			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	Surveys		Item			
B	Samples		Item			
C	Warranties		Item			
	Include for all testing, surveys, samples & warranty requirements as set out in the Engineers works requirements					
D	Testing		Item			
E	Surveys		Item			
F	Samples		Item

	INFORMATION					
A	This element of the work has been measured from Architects Drawings and Engineer's drawings		Note			
B	The Architects drawings and specifications are all complementry to each other and should be read in conjuction with one another.		Note			
C	The Contractor is advised that the Works Requirements and Pricing Documents are all complementary to each other and should be read in conjunction with one another.		Note			
D	For detailed description of workmanship and materials refer to Specifications		Note			
	IN-SITU CONCRETE					
	In-situ concrete; designed concrete mix to IS EN 206-1; compressive strength class C30/37; reinforced and vibrated; all in accordance with the Works Requirements and the Structural Engineers specification for concrete					
	Walls					
E	>150mm thick: reinforced	7	m3			
F	Extra over for building off top of existing masonary external wall at roof level. Include for preparing top of existing masononary wall to take reinforced concrete wall	9	m			
	Infill between existing Ribbed Floor Slab Troughs and new load bearing blockwork, all as per Engineer's Detail F on Drawing DR-S-4000					
G	215mm wide	1	m3			
	REINFORCEMENT					
	Reinforcement bars, to engineer's specification					
	Bar:Straight or bent					
H	nominal size < 12mm	0.7	tonne			
J	nominal size 12 - 25mm	0.7	tonne			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	FORMWORK					
	Wrot formwork as described to Engineer's specification to :-					
	Edge of Infill					
A	< 300mm Wide	13	m			
B	Ditto cut to profile of underside of existing ribbed floor flab	13	m			
	Kickers to:-					
C	Walls	9	m			
	Walls					
D	Vertical < 4.00m high	63	m2			
E	Ditto <300mm wide	31	m			
	Edges of openings					
	Walls					
F	Area of opening 1.00 - 5.00m2	2	no			
	Sundries					
G	Allow for casting in 100mm diameter sleeves through 215mm thick concrete walls for incoming services	10	no			
	Blockwork Walls					
	Blockwork					
	Concrete blocks to I.S.20; to I.S. 325 and EN 771-3; compressive strength 13.5N/mm2; 440 x 100 x 215mm nominal size; in mortar 1:1:5 or 6 mixture of Cem 1; strenght class M4 to BS EN 998-2; laid in half lap stretcher bondwith neat flush pointing as the work proceeds; all as per Architects Specification F10 355 and Engineers Specification 355A					
	Walls- Built roof level of existing convent building,					
H	215mm thick built off top of existing masonary wall, include for praring existing masonary wall to take new blockwork.	16	m2			
J	100mm thick	11	m2			

	Description	Qty	Unit	Rate	€	c
	Walls- Built within existing convent building					
A	215mm thick	41	m2			
B	100mm thick	28	m2			
	Ancillaries to Blockwork					
	Lintels					
	Prestressed Concrete lintels; Standard: To IS EN 845-2. Total load deflection is not to exceed span/200. Placement: Bed on mortar used for adjacent work. Prop at not more than 1.2 m centres to prevent displacement during construction. Retain props in position for not less than 14 days or until mortar has matured, whichever is longer. Bearing length (minimum): Minimum 150 mm unless noted otherwise on drawings. All per Engineer's drawings and Specification					
C	215 x 100mm thick	2	m			
D	100 x 100mm thick	2	m			
	Liner gap sealing generally where Walls Meets Underside of Building Structure					
	Fire performance: 60 minutes. Gap width or height (nominal): 12.5 mm - 100mm. Gap filler: Rockwool Firestop 2A or equivalent4. Capping sealant: Rockwool or equivalent Acoustic Intumescent Sealant. Colour: Grey. Product to be installed as per manufacturer's standard tested details. Include for capping sealant., complete all per Architect's drawings and Specification P12/160A in;					
	Between top of wall and underside of existing concrete ribbed floor slab, Include for sealing troughs in ribbed floor slab.					
E	215mm wide	13	m			
F	100mm wide	9	m			
	Between top of wall and underside of lighteweight roof deck					
G	215mm wide	13	m			
H	100mm wide	3	m			

To Collection €

	Description	Qty	Unit	Rate	€	c
	Design Joints					
	Joints with Reinforced Concrete Walls / Columns					
	Bonding to Other Work					
A	Ancon PPB Debonded wall ties, having one end shot fired to web of steel stanchion, and other end built into 215mm blockwork wall at 450mm vertical centres, as the works proceed.	4	m			
B	215mm Blockwork tied to face of existing internal rendered masonary wall of existing building, Include for all necessary preparing existing rendered wall to recieve new blockwork wall, and also for any necessary reinstatement after. All to the satisfaction of the Engineer and Architect, and per Engineer's drawing 4012	10	m			
C	100mm Blockwork, ditto	39	m			
	Testing, Surveys, Samples & Warranties					
	Include for all testing, surveys, samples & warranty requirements as set out in the Architects works requirements

	(27 & 28) ROOF & FRAME					
	INFORMATION					
A	This element of the work has been measured from Engineers Drawings 244110-PUNCH-02-FN-DR-S-1000 to 1005, 2000 to 2002, 3000 to 3002 and 4000		Note			
B	The Engineers drawings and specifications are all complementry to each other and should be read in conjuction with one another.		Note			
C	The Contractor is advised that the Works Requirements and Pricing Documents are all complementary to each other and should be read in conjunction with one another.		Note			
D	For detailed description of workmanship and materials refer to Specifications		Note			
E	The tenderers should examine the Architects and Engineers drawings and specifications and satisfy themselves as to the nature and extent of the works outlined below and should include for all costs in connection with same		Note			
F	The tenderers shall include in their tender breakdown for temporary propping of slabs, all mitre bonded angles, finished and polished ends, edges and soffits; all hangers to have one hour intumescent coating, stainless steel cramps, dowels, secondary steel, expansion or chemical bolts and fixings, cleats, brackets and plates; drilling of steel / concrete structure and precast panels; all grouting and pointing as specified		Item			
G	They shall also be responsible for the design, supply and installation of all fixings between precast slabs/units and the main building structure.		Note			
	Woodwork: Structural and First Fixings					
	Structural and First Fix					
	Sawn Softwood, Vac-Vac treated; white deal; stress grade to structural class B, grade C16 timbers					
	Carcassing;					
	Flat Roof to Ground Floor Extension					
H	200 x 44mm treated timber packer fixed into web of Steel Beam with and including M12 blots @ 400mm c/c (per Engineer's Detail A, Drawing 02-XX-DR-S-4000)	244	m			
J	200 x 60mm treated timber packer fixed into web of Steel Beam with and including M12 blots @ 400mm c/c (per Engineer's Detail A, Drawing 02-XX-DR-S-4000)	5	m			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	200 x 100mm treated timber packer fixed into web of Steel Beam with and including M12 blots @ 400mm c/c (per Engineer's Detail E, Drawing 02-XX-DR-S-4000)	26	m			
B	175 x 44mm roof joists @ 400mm c/c	638	m			
C	Ditto incorporated into top of firerated stud wall all per Architect's drawing 211	22	m			
	Solid Bridging (Measured across roof joists)					
D	150 x 44mm bridging joists @ 1350mm c/c	119	m			
	Plywood					
E	18mm marine grade plywood fixed to roof joists @ 400mm c/c	249	m2			
F	Ditto to side of Parapet Upstands < 300mm high	159	m			
G	Ditto to side of AOV Upstands > 300mm high	10	m2			
	Labours					
H	Treat ends of joists with coloured preservative to B.S 5707; part 3 1980; 250mm long	192	No.			
	Ironmongery, Accessories and Sundries					
	Metal accessories to woodwork in galvanised mild steel; joist hangers all as per Engineer's Drawings					
	Accessories; straps and hangers					
J	Simpson face fix joist hanger fixed onto timber packer to suit 175 x 44mm joist	566	No			
	Reinforced concrete grade C32/40; filling into formwork; tamped around reinforcement all as per Engineers concrete specification:					
	Upstand					
	Rectangular; to top of existing concrete roof deck					
K	cross sectional area less than 0.10m2	2	m3			
	Lift Shaft Roof Slab					
L	200mm thick	2	m3			

To Collection €

	Description	Qty	Unit	Rate	€	c
	Reinforcement					
	Bar reinforcement; all in compliance with Engineers Concrete Specification Section E30; must be free of loose millscale and thoroughly cleaned to remove all loose rust, oil, grease or other harmful matter prior to being placed in position with and including all necessary laps, spacers, chairs and tying wire; all in strict accordance with the Engineers drawings and Specification					
	Bar					
	Straight or bent					
A	Nominal size < 12mm diameter	0.25	tonne			
B	Nominal size; 12 - 25mm diameter	0.25	tonne			
	Formwork					
	Wrot formwork as described to Engineer's specification to : -					
	Soffit of Roof Slab					
C	> 300mm wide	8	m2			
	Soffit of Roof Slab					
D	< 300 mm wide	12	m			
	Upstand; isolated; rectangular					
E	< 300mm high	44	m			
	Surface Finishes					
F	Float concrete finish to Roof Slab to falls	8	m2			
G	Trowl finish to top of upstand <300mm wide	22	m			
	Structural Steelwork					
H	This structural steelwork is measured in accordance with the Agreed Rules of Measurement, 2009 (ARM 4) jointly published by the Society of Chartered Surveyors (SCS) in the Republic of Ireland and the Construction Industry Federation(CIF)		Note			
J	Rates are to include for all labours in connection with the following work including all fittings		Note			
K	All elements of the structure Designed by the Contractor shall be submitted to the Structural Engineer for comment		Note			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	The Contractor shall provide temporary bracing and shoring against lateral forces and all construction loads throughout the work. Design of temporary bracing and shoring is to be submitted to the Structural Engineer for approval		Note			
B	Rates for Structural Steel are to include for all site welding. The Contractor shall note this measurement preamble amends the Agreed Rules of Measurement Ref page 85/4/5 & 6		Note			
C	Rates for Structural Steel are to include for all site bolts. The Contractor shall note this measurement preamble amends the Agreed Rules of Measurement Ref page 85/2/3		Note			
D	Provide for complying with the Specification requirements for tests of materials, workmanship, tolerances and finished structures		Note			
E	Main Contractor shall note that he will be required to execute a Collateral Warranty in favour of the Employer for the Design Supply and Installation of Structural Steelwork		Note			
	Builders Work Requirements					
	The Contractor must obtain in time all necessary information relating to the structural steel erection builders work to enable the works to be carried out without interruption. Any additional costs incurred by his failure to obtain this information will be at his own expense					
F	Setting out Structural Steel with Specialist Contractor		Item			
	Structural Steelwork					
	Notes:					
G	1. The Contractor is required to design, provide and fix all necessary fittings; caps; bases; haunches; gussets; end plates; splice plates; bolts and associated fittings and connections which may be necessary to complete this section of the works. The Contractor is required to liaise and co-ordinate with other trades to provide and fix all such fixings as may be necessary for this installation		Note			
H	2. The Contractor will be required to carry out 100% testing on all site welding as detailed in Structural Engineers Civil & Structural Specification.		Note			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	The following steelwork to be Grade S355; in accordance with EN 10029:1991 and the Structural Engineers Civil and Structural Specification; fabrication, surface preparation, priming at works and site erection and treatment to comply fully with all aspects of the structural steelwork specification; all as per Engineers Performance Specification.					
	Fabricated steelwork; welded fabrication,bolted and welded site connections					
	The following in prefabricated steel framework including bolts, nuts and washers for steel connections, shot blasting, shop primed and painted as per Engineers Specification and Drawings including fittings; caps; bases; haunches; gussets, end plates; splice plates; cleats; brackets; angles; stiffener plates; distances pieces and associated fittings.

DOUBLE GLAZED WINDOWS/SCREENS					
Timber Framed Composite Items					
Timber frame 3 panel glass sliding doors with integrated side hung access/egress door to ground floor extension. Contractor design of glazing and door frame structure to meet performance requirements. Performance:. Security:: High security (Secured by Design). RC2. Thermal:: U-value: 1.2 W/ m2K. Include for airtightness tape, all to achieve Airtightness: Class 3 to EN 12207 (tested to 600 Pa) Dual compression seals. Water tightness: Class 9A to EN 14351-1 (no water ingress at 600Pa). Windload: Class 4B to BS EN 12211 (test pressure 1600Pa & frame deflection < 1/300). Barrier load minimum performance requirement calculated as EN 1991-1: Horizontal UDL: 1.5KN/m UDL applied to infill: 1.0kN/m2 Point Loat 0.5kN. Durability: Category 5. Arrangement: Multi-leaf slide, bottom-rolling + intergrated side hung access door closing to end sliding panel. lift and slide roller mechanism. Door leaf: Construction:: Timber - Solid Iroko frame. Finish as delivered: Full factory treatment and finish - preservative treatment. Glazing/ infill details: Triple glazed, 56 mm - Toughened self-cleaning. Manifestation: To comply with TGD Part M. Operation: Manual. Ironmongery: Multi leaf - lift and slide mechanism, Internal handle. Siegenia Aubi Portal HS400 lift and slide. or Equivalent. Include for Threshold: ECO Pass - thermally isolated Aluminium. Other requirements: Self cleaning roller Soft close function Bogie wheels 8 self-aligning rollers. Locking - thumb turn internally, europrofile cylinder externally Part M compliant threshold profile (max 15mm high with pencil rounded edges). Emergency egress:: Side hung access / egress door must provide clear opening width of 800mm and be connected to BMS / break glass unit to provide egress in event of fire. Security Rating: RC2. Verification. Submittals: Manufacturers document including datasheets, DOP and evidence of CE marking before placement of orders					
Include for Airtight Seals/ Tape and foam as per Specification and as shown on drawings. Include also for EPDM and all Mastic Pointing to perimeter of frames. Include for all necessary fixings. Include for all associated ironmongery and opening sections. All as per Architects plans, elevations and window schedules [dwg 606] and as per Architects specification clauses L20A specifically L20A/520; and all in accordance with the manufacturers instructions.					
Bespoke joinery fabrication sliding external door					
A Type DG - Glazed Sliding Door, incorporating single swing door, Strutural ope size overall 6245mm wide x 3040mm	2	nr			

To Collection €

	Description	Qty	Unit	Rate	€	c
	Screens / Doors					
	Aluminium curtain walling system with externally flush silicone jointing between adjacent toggle fixed glazing units and adjoining perimeter cladding. Curtain wall mullion profiles shall be internally reinforced where necessary and dead load supported and laterally restrained at floor levels. Supporting structure: Steel superstructure for vertical elements and head detail. Reinforced Concrete upstand for base detail (elsewhere measured). Curtain walling system: Thermally broken stick system, pressure equalized and naturally ventilated/ selfdraining - Schuco FW60+SG or equivalent. Material: Aluminium. Finish: Anodizing. Colour/ texture: Natural - Refer to Section Z33. External cover cap Aluminium Anodizing. Colour/ texture: Natural - Refer to Section Z33. Glazing: Performance requirements:: High performance solar control coated (typically high performance solar control coating to surface #4 or #6), argon filled, toggle fixed, insulating triple glazed vision units with PVB (acoustic if required) laminated 1(B)1 (in accordance with EN12600) safety glass to external and internal leaf's with black warm edge spacer bar technology (Swisspacer Ultimate or equivalent). Medium-iron content substrates to be used throughout. Average glazing u-value including frame factor: see clause 370. Glazing light transmittance (G-value): 0.40 maximum. Glazing Security performance (EN356): P4A. Accessories: Any associated accessories required to complete the system design including, but not limited to: Ironmongery, Perimeter flashings, Glass manifestation, Firestopping when curtain wall abuts internal compartment barriers (2no instances). Proprieraty detail required. Incorporated components: Doors (2no). Other requirements: Glass panels forming external wall of stairwell to be obscured / painted internally prior to installation.					
	Include for Airtight Seals/ Tape and foam as per Specification and as shown on drawings. Include also for all Mastic Pointing and EPDM to perimeter of frames. Include for all necessary fixings. Include for all associated ironmongery and opening sections. All as per Architects plans, elevations and window schedules [dwg 603] and as per Architects specification clauses H11 specifically H11/110; and all in accordance with the manufacturers instructions.					
	Curtain Walling					
A	Type WR- Glazed Screen incororation 2no. Single Doorsets and approx 600mm high insulated spanderal panel to top of screen. Overall size 21645mm wide x 2900mm high	1	nr			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Extra Over for;					
A	Vertical Pressed Aluminium Flashing, powdercoat finish to match curtain walling, girth <150mm, 3 times cranked, to reveals, include for Sealant to spec. Z22/310, etc complete all per Architect's Drawing 318 and Specification	6	m			
B	Extra over for neatly working around support steel beams for Brise Soleil, incl for all necessary seals, flashings etc, complete all per Architect's drawing 319.	9	No.			
	Doors					
	High insulated aluminium doorset for stairwell entrance / external egress, including fire rating where applicable. By Schueco or equivalent. Product reference: ADS 70 HI - or equivalent: Outward swinging glazed door with sidelight Fire resistance: EI30Sa in accordance with IS EN 13501-2: Outward swinging glazed door. Min. clear opening part L: 1300 mm. Fire resistance: NFR. Acoustic performance: Rw (C;Ctr) = 33 (-2;-5) dB - 36 (0;-2) dB. Thermal performance (U-value maximum): 1.4 W/m2K. Security (Intruder resistance): RC2/ WK2 to European standard EN(V)1627-EN(V)1630. Watertightness: Up to 600 Pa (class 3). Air permeability: Up to 300 Pa (class 7A). Resistance to wind load: Up to 800 Pa (class C2). Door leaf. Material: Anodized Aluminium - to match finish as clase L10/410. Frame. Material: Anodized Aluminium - to match finish as clase L10/410. Threshold: Flat aluminium with brush seal. Glazing/ infill details:. Type:: Double glazed. Fixing: Glass to be set against extruded EPDM rubber gaskets retained in undercut grooves within the aluminium profile and clip-in glazing beads. Ironmongery: Handles: Shield handles, natural anodized. Access controls: Refer to electrical engineers specification. Closer: Overhead closer compatible with doorset manufacturer guidelines.. Perimeter seals: Fire and smoke seal + EPDM weatherseal as necessary.					
	Include for Airtight Seals/ Tape and foam as per Specification and as shown on drawings. Include also for all Mastic Pointing, EPDM, mineral wool packer, to perimeter of frames. Include for all necessary fixings to existing masonary wall. Include for all associated ironmongery and opening sections. All as per Architects plans, elevations and window schedules [dwg 314 & 605] and as per Architects specification clauses L20A specifically L20A/480; and all in accordance with the manufacturers instructions.					
	Composite Doors					
C	Type DF- Single Door size with glazed fan light over. overall 1545mm wide x 2555mm high	1	nr			

To Collection €

A	Type DJ- Single Door size with glazed fan light over. overall 1545mm wide x 2555mm high	1	nr			
B	Type DH (DVR - Laundry): Outward swinging solid aluminium door. Min clear opening Part L: 800mm. Fire Resistance: Fire resisting doorset achieving 60 minutes fire resistance (Integrity) in accordance with EN 1634: 2014. Doors fitted with smoke seals to be in accordance with EN 1634-3. Performance. Fire performance. Fire resistance: EI30 Sa. Smoke leakage: Sa. Reaction to fire: To BS EN 13501-1, Class B-s3, d2 or better. Size overall 1090mm wide x 2120mm high;	1	nr			
				To Collection €		

Description	Qty	Unit	Rate	€	c
Windows Highly insulated thermally broken aluminium sash and timber frame. Aluminium sash profiles will be fully ventilated and drained through concealed drainage channels and incorporate an aluminium glazing rebate. The sealed glass unit must be internally dry-glazed with EPDM gaskets and the glass rebate must be formed of aluminium. Novus windows or Equivalent - Nation Ideal Combi or Equivalent. Standard: Non-fire-rated and/ or non-smoke-rated windows to BS EN 14351-1 & Fire-rated and/ or smoke-rated opening windows to BS EN 14351-1 and BS EN 16034. Materials. Exterior frame/ sash cladding: Aluminium/ Timber Outward & Inward Opening Sashes. The window sash will have a 54mm external sash profiles which are fully ventilated and drained through concealed drainage channels and incorporate an aluminium glazing rebate. Finish: The external aluminium sash must have an anodized finish Colour/texture: Natural - Refer Section Z33. Interior frame/ sash section: The system must have an internal structural frame of laminated softwood, sourced from a renewable and managed supply chain. Quality optimised finger jointed timber with 149mm (or 175mm) overall depth of frame. The frame is completed with PUR core with a lambda value of 0.074 W/mK and external PPC Aluminium profile. Timber standard: To BS EN 942. Softwood as table NA1 Appearance class: J30. Moisture content on delivery: 12 - 19%. Assembly adhesive: Thermosetting resin to BSEN 12765 class C4. Joinery workmanship: As section Z10. Preservative treatment: Organic solvent as section Z12 and WPA Commodity Specification C5; service life 50 years. Finish: The internal timber frame to be preservative treated with fungicides and have a further two coat factory pre-finish with an environmentally friendly (solvent free) 100% Acryl emulsion/water-based surface treatment. The coating is to have a dry paint thickness of between 60-100 ?m and a colourless finish to gloss level 25 (silk matt).

Galvanised straps at 600mm centres, or as manufacturers recommendations. Performance: Air permeability: Class 4 at 600 Pa in accordance with EN 12207: 2016and EN1026:2016. Water tightness: Class E1500 in accordance with EN 12208: 2000. Wind load: Class C4 in accordance with EN12210: 2000. no deformation or damage must be recorded at an applied wind pressure of 1800PA using test method EN 12211 (BS 6375 part 1). Exposure category: 1600 in accordance with BS6375: Part 1: 2009 and the window system must be tested to meet the requirements of BS 6375 part 2. Security: PAS 24:2012: Pass. Thermal performance (U-value maximum): The thermal transmittance (U value) for the window system and glazing (including spandrel panels) shall not exceed: Overall Windows U Value (Uw) = 1.1 W/M2 K. Operation and strength characteristics: To BS 6375-2. Acoustic performance rating: Manufacturer's standard. Environmental performance: Manufacturing facilities will operate an ISO 14001 environmental policy as will key suppliers. All timber will be fully FSC certified, and 85% of aluminium will be procured from hydro-electric sources with a recycled content of at least 50%. Glazing details: Low "E" Double Glazed Unit in accordance with EN 1279 Light Transmittance (Lt): 0.74 Warm Edge Spacer Bar: Black Swiss V. Safety glass to BS 6262 and in accordance with TGD's Safety glass to BS EN12600:2002, below 800 mm above finished floor level and below 1500mm within 300mm of doors.					

To Collection €

	Description	Qty	Unit	Rate	€	c
	The use of site-applied wet or dry sealant placed in the outermost plane of the windows/screens in order to seal between units and/or other adjacent materials will be unacceptable. TGU U Value (Ug): 0.53 W/M2K. g-value: : 0.53. Light Transmittance (Lt): 0.74. Warm Edge Spacer Bar: Black Swiss V. Safety glass: Safety glass to BS 6262 and in accordance with TGD's. Safety glass to BS EN12600:2002, below 800 mm above finished floor level and below 1500mm within 300mm of doors.. Ironmongery/ accessories: To include: PPC Aluminium Tray Cill Pressings. Concealed Aluminium Click Vents. Integrated Espagnolette Handles to operate a fully concealed multi-point locking mechanism with night vent position. Concealed Dual Function Restrictors to all openings above GFL. Friction stays, sliding tracks, hinges and handles must be sourced from one single manufacturer and/or must have been developed and engineered specifically with the proposed window system in mind. Opening handles are to be single handles incorporating a multipoint locking mechanism fully concealed within the sash with only one handle permitted per window/door. Alternative handle specification will be to provide 2 SAA (or equivalent) square catch handles per window. Enhanced ironmongery to be upgraded from general specification above due to increased security requirement: Refer to Section P21 505 and ironmongery schedule for further details.. Background ventilation: Concealed aluminium click vents to provide equivalent area as required for compliance with TGD Part F 2019. A schedule of ventilation areas achieved by each window unit is to be provided to the Architect prior to placement of order. Warranty & Design Life: The window system will have an expected design life of at least 60 years and a schedule of maintenance will be provided. The complete window inclusive of framing, gaskets, ironmongery and glazing will be covered by a 10 year warranty from date of manufacture. Verification:. Submittals: Manufacture: Window production facilities will operate an ISO 9001 quality control system, before placement of orders. Include for Airtight Seals / Tape and foam as per Specification and as shown on drawings. Include also for all sealant (Z22/310) Mastic Pointing and EPDM to perimeter of frames. Include for all necessary fixings. Include for all associated ironmongery and opening sections. All as per Architects plans, elevations and window schedules [dwg 602] and as per Architects specification clauses L10 specifically L10/410; and all in accordance with the manufacturers instructions. Window

	Description	Qty	Unit	Rate	€	c
	Louvre windows with actuators to provide smoke extraction to communal corridor areas. Natural smoke and heat exhaust ventilators in accordance with IS EN 12101. By Fieger or Equivalent: FLW-32 or Equivalent. Ventilation requirements: Minimum free area of 1.5m2, in accordance with Para 6.1.4 of the TGD- B: 2024. Operation: The vents will be automatically opened by the fire detection and alarm system, on activation of smoke detectors in the stairway enclosure/ on activation of the smoke control system as specified by Mechanical & Electrical Engineer and will also be manually openable for fire brigade use. The manual override will be provided with clear signage as to its function and operation, for fire service use only. AOV's will comply with IS EN 12101-2. Where any part of the control mechanism is powered by electricity, a secondary supply will be provided. Integration of control systems: Refer to Mechanical & Electrical Engineer specifications and drawings. Finish to match system specified Section L10/410. Frame dimensions: Visible frame width (vent): 40mm (horizontal and vertical). Visible frame width (louvres): 21 mm. Performance: in accordance with IS EN 12101-2. Thermal performance (U-value maximum): 1.1 W/m2K with triple glazing. Air permeability: Class 4 in accordance with EN 12207. Watertightness: Class 7A in accordance with EN 12208. Glazing details: 28 mm double-glazed. Accessories: As required to complete the commissioning of the smoke control system including, but not limited to the following: -Fireman's override switches, -Key switches, -MCC Panel, -Pressure sensors. Refer to Mechanical & Electrical Engineers drawings and specifications for more details. Include for Airtight Seals / Tape and foam as per Specification and as shown on drawings. Include also for all sealant (Z22/310) Mastic Pointing and EPDM to perimeter of frames. Include for all necessary fixings. Include for all associated ironmongery and opening sections. fixed within ope in existing external masonary wall of convent. All as per Architects plans, elevations and window schedules [dwg 601] and as per Architects specification clauses L10 specifically L10/390; and all in accordance with the manufacturers instructions. Window					
A	Type L- Automatic Opening Window (Smoke) 1,150mm wide x 2,260mm high	1	nr

	Galvanised Steel					
	Supply and fix Galvanised Steel plate to support glazed head of screen / doorsets, fixed to underside of structural steel beam (elsewhere measured), include for thermal break pads, etc. all as per Architects Drawing 331 and Engineer's drawings and specification					
B	220mm x 10mm	13	m			
	Brise Soleil					
	Aerofoil Aluminium Louvres/ Brise Soleil 1. Proprietary brise soleil/ vertical louvre system configured as indicated on the Design Drawings, fixed to galvanised steel support beams (elsewhere measured). Louvre blades and side support arms shall be aluminium. Stainless steel brackets and clips. Concealed stainless steel fixings. Horizontal Aerofoil Shading Fins: a. Aluminium extruded aerofoil profile fins to sizes and configuration indicated on the Design Drawings. Finish: Polyester powder coated in a RAL colour to the ER's acceptance via samples. Include for painting galvanised steel support beam matching colour. Fixings: a. Countersunk stainless steel Allen key head fixings throughout. b. Facilitate simple and convenient demountability of the fins for replacement. 8. The blades shall withstand all loadings from cleaning and maintenance operations without deterioration in performance or appearance. 9. Ends of each bank of aerofoil sections shall be open jointed, co-ordinated and configured to align with the joints in the curtain wall sections. Fixed to galvanised steel support beams with concealed fixings and including high density thermal insulation break; all as per Architects Drawings 319 & 414 and Specification.

(31) EXTERNAL WALL COMPLETIONS **Carried to Summary**					

	Description	Qty	Unit	Rate	€	c
	(32) INTERNAL WALL COMPLETIONS					
	INFORMATION					
A	This element of the work has been measured from Architects Drawings		Note			
B	The Structural Engineer's & Architects drawings and specifications are all complementry to each other and should be read in conjuction with one another.		Note			
C	For detailed description of workmanship and materials see specification.		Note			
D	All exposed hardwood and softwood shall be kept clean in preparation for decoration		Note			
E	Doorsets described as fire resisting are to be provided exactly in accordance with a specification describing construction and ironmongery which as when tested to BS 476: Part 8 or BS 476: Part 22: 1987 provided fire resistance of no less period than specified		Note			
F	Manufacturing Test Certificates, Reports, Supplements and Evaluations are to be provided as evidence that all functions, sizes and glazing arrangements that are to be supplied are approved.		Note			
G	All fire doors are to be identified by a permanently fixed small flush metal plate, indicating the period of fire resistance, manufacturer, year of manufacture and other pertinent details		Note			
H	Doors and screens (measured separately) in this section have not been fully described and the Contractor is to examine the joinery details and to include in his rates for all hardwood spacers, frames, heads, cills, jambs, mullions, transoms, plinths, doorstops, glazing beads, fillers etc. and all their associated labours, all exposed components to be glued and countersunk screwed only (securing frames i.e. holes, bolts and mortices in solid concrete blockwork are measured separately)		Note			
J	All Internal doors are to conform to part 1.9 (a,b,c,d,e,f) and diagram 5 and 6 of the TGD part M 2000		Note			
K	NOTE: Design Team preference for complete Door System manufacturer and final certification by one supplier (frame, ironmongery etc.). Where alternative is proposed method for certification by contractor should be submitted for Design Team approval		Note			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	Contractor is required to provide complete Door System manufacture and final certification by one supplier (frame, ironmongery etc.). Where alternative is proposed method for certification by contractor should be submitted for Design Team approval.		Note			
	Contractor to identify party that will act as ancillary certifier for complete doorset (Doorset ancillary certifier). Doorset ancillary certifier to ensure the following; All per Architect's Specification L20					
B	- that Fire Test Certification is available for all doorsets		Note			
C	- that Fire Test Certification for each doorset is compatible with proposed door frame detail, and with proposed gap under door (in particular if gap is required below door for air circulation)		Note			
D	- that doorset is installed in accordance with fire test certification, in particular in relation to gap between frame and ope, and between doorset and frame/ floor below		Note			
E	- that ironmongery proposed is fully compatible with Fire Test Certification for door and frame		Note			
F	- that proposed doorsets comply with both Part B for closing force requirements and Part M for opening force limits		Note			
G	- that minimum acoustic standards for entire doorset are met		Note			
H	- that all maglocks are installed and commissioned to ISEN13637		Note			
J	- that all fire rated glazed screens are fitted with appropriate glazing to ensure that integrity and insulation requirements are met		Note			
K	- Certification: Provide independently certified evidence that all incorporated components comply with specified performance requirements.		Note

	WOODWORK					
	Hardwood Architraves to BS 1186-3. Species: European Oak (Quercus Petrea). Class: CSH class 1. Moisture content at time of fixing: 6-10 %. Profile: Pencil round arris. Finished size: 100mm x 19mm. Finish as delivered: clear matt lacquer as clause N10.025. Fixing: screwed and pelleted or as noted on the drawings.. Include for all necessary mastic seals, etc. complete. All per Architect's Specfication P20/120B & Drawings 580 - 583					
	Architrave					
A	75 x 19mm thick	699	m			
	Composite Items					
	Doorsets all as per Architects Drawing no. 610					
	Doorsets, complete. Fire resistance: To IS EN 13501-2, E30. Reaction to fire: To IS EN 13501-1, Class B-s3, d2 or better. Evidence: As clause 115. Acoustic performance: To EN ISO 10140-2, sound reduction index Rw 35 db minimum. Mechanical strength: To IS EN 1192, Class 2 Door leaf. Core: laminated solid timber or 3 layer particleboard solidcore. Thickness: As required by manufactuters's performance evidence - nominal 44 mm.. Facings: Veneered MDF or plywood. Veneer: European Oak (Quercus Petrea) Crown cut and book matched subject to approved sample. Lippings: 9mm solid hardwood continually bonded to core: note veneer runs over. Finish as delivered: 2 coats matt lacquer. Include for Frame: As clause 330. Door Operation: Single leaf - Double action floor spring. Closer: Fire rated double action closer - tested to EN 1634-1. Include for Architrave: As clause P20/120A. Include for Ironmongery: Refer to ironmongery schedule. Perimeter seals: Fire and smoke seal & Acoustic seal as required to meet acoustic and fire performance. Other requirements: Hardwood doorstops: include for all necessary packer pieces, paint / decoration to door leaf and frame, etc. complete: all per Architect's Specification L20B/415B					
	Single Doorsets					
B	Doorset Type D;- 1,070 x 2,250 high; (FD30). Include for supply and fitting ironmongery SET KR1067	2	no			

	Description	Qty	Unit	Rate	€	c
	Doorsets, Fire resistance: To IS EN 13501-2, E30. Reaction to fire: To IS EN 13501-1, Class B-s3, d2 or better. Evidence: As clause 115. Acoustic performance: To EN ISO 10140-2, sound reduction index Rw 35 db minimum. Mechanical strength: To IS EN 1192, Class. Door leaf; Core: laminated solid timber or 3 layer particleboard solidcore. Thickness: As required by manufactuters's performance evidence - nominal 44 mm. Facings: Veneered MDF or plywood. Veneer: European Oak (Quercus Petrea) Crown cut and book matched subject to approved sample. Lippings: 9mm solid hardwood continually bonded to core: note veneer runs over. Finish as delivered: 2 coats matt lacquer. Frame: As clause 330. Closer: Overhead concealed. Architrave: As clause P20/120A. Include for Ironmongery. Perimeter seals: Fire and smoke seal & Acoustic seal as required to meet acoustic and fire performance. Other requirements: Hardwood doorstops. Verification; Submittals, complete: include for all necessary packer pieces, paint / decoration to door leaf and frame, etc. complete: all per Architect's Specification L20B/410B					
	Single Doorsets					
A	Doorset Type A;- 1,070 x 2,250 high; (FD30). Include for supply and fitting ironmongery SET KR1014	4	no			
	Doorsets all as per Architects Drawing no. 612					
	Doorsets, complete. Reaction to fire: To IS EN 13501-1, Class B-s3, d2 or better. Evidence: As clause 120. Acoustic performance: To EN ISO 10140-2, sound reduction index Rw 35 db minimum. Mechanical strength: To IS EN 1192, Class 2. Door leaf; Core: laminated solid timber or 3 layer particleboard solidcore. Thickness: As required by manufactuters's performance evidence - nominal 44 mm. Facings: Veneered MDF or plywood. Veneer: European Oak (Quercus Petrea) Crown cut and book matched subject to approved sample. Lippings: 9mm solid hardwood continually bonded to core: note veneer runs over. Finish as delivered: 2 coats matt lacquer. Frame: As clause 330. Door Operation: Single Leaf - Double Action. Architrave: As clause P20/120A. Include for Ironmongery. Perimeter seals: Fire and smoke seal & Acoustic seal as required to meet acoustic and fire performance. Other requirements: Hardwood doorstops. Verification, Submittals. include also for all necessary packer pieces, paint / decoration to door leaf and frame, etc. complete: all per Architect's Specification L20B/415A					
	Single Doorsets

	Painting and Decorating					
	Prepare and paint Dulux system D1213 or Equivalent, new interior hardwood and non resinous softwood. Preparation: New wood should be ideally preservative impregnated, see BS 5268 and BS 5589. Clean to ensure free from dirt and grease etc. Remove oils from surface of wood by wiping with Dulux thinner 41 or White spirit. Abrade to remove sharp edges and any raised grain. Treat knots and resinous areas by removing resin and applying a thin coat of Dulux Knotting solution, serious troublesome knots should be cut out and replaced with sound wood. Ensure all surfaces are fully dry before proceeding. Initial coats: one coat Dulux MDF primer undercoat thinned 1 to 5 as manufacturers recommendations. Finishing coats: Two coats Dulux Trade Diamond Eggshell Finish. All as per Architects drawings and Achitects specification clause M60 - 175A.					
	Door Architrave,					
F	girth <300mm	499	m

(32) INTERNAL WALL COMPLETIONS **Carried to Summary**					

	Description	Qty	Unit	Rate	€	c
	(33) & (34) FLOOR & STAIR COMPLETIONS					
	INFORMATION					
A	This element of the work has been measured from the Architects Drawings & Engineers Drawing Nos.					
	This Element and the Architects and Engineers drawings and specifications are all complementary to each other and should be read in conjunction with one another.		Note			
	For detailed description of workmanship and materials see specification.		Note			
	The tenderers should examine the Architects and Engineers drawings and specifications and satisfy themselves as to the nature and extent of works outlined below and should include for all costs in connection with same.		Note			
	Notes:					
	1. The tenderer is required to provide and fix all fixings, supports etc. which may be necessary to complete the works.		Note			
	2. "Notwithstanding that this Bill of Quantities is measured in accordance with the Agreed Rules of Measurement, Fourth Edition 2009, the Tenderer should note the following deviations at:		Note			
	(a) grouting, drilling/forming holes in other construction for fixings deemed to be included within the referenced unit rate item		Note			
	Service Shafts					
	Graepel Flooring or Equivalent to be provided in all Service Risers at Floor Levels, all as per Engineer's Detail F on Drawing DR-S-4000. Approx size of service shaft					
B	1200mm x 600mm	3	No			
C	1150mm x 600mm	6	No			
	Extra Over for					
D	All necessary cutting / adjusting for services		Item			
	Equal Angles Fixed Into Walls With M16 Chemical Anchor Bolts At 400mm Max Centers					
E	100mm x 100mm x 10mm	32	m			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	WOODWORK: Boarding and Second Fixings					
	Extending Handrails to Existing Stairs					
	Handrails: Hardwood Handrail fixed to rendered Blockwork, include for decoration, brackets etc. complete, all to match existing handrail to stairs. Fixings to be to contractor design to suit loading requirements as required by Building Regulations. All as per Architects Drawings and Specification					
A	handrail fixed to wall; horizontal	2	m			
B	ditto; raking	3	m			
C	e/o for bends, 90 degree	1	no			
D	e/o for ends	1	no			
E	e/o for forming neat connection with existing handrail. include for preparing existing handrail to receive new extended handrail	1	no			
	Painting and Decorating					
	Prepare and paint Dulux system D1213 or Equivalent, new interior hardwood and non resinous softwood. Preparation: New wood should be ideally preservative impregnated, see BS 5268 and BS 5589. Clean to ensure free from dirt and grease etc. Remove oils from surface of wood by wiping with Dulux thinner 41 or White spirit. Abrade to remove sharp edges and any raised grain. Treat knots and resinous areas by removing resin and applying a thin coat of Dulux Knotting solution, serious troublesome knots should be cut out and replaced with sound wood. Ensure all surfaces are fully dry before proceeding. Initial coats: one coat Dulux MDF primer undercoat thinned 1 to 5 as manufacturers recommendations. Finishing coats: Two coats Dulux Trade Diamond Eggshell Finish. All as per Architects drawings and Achitects specification clause M60 - 175A.					
	Handrail					
F	girth <300mm	5	m

	Glazing					
	AOV to top of Stairwell					
	Glazed AOV smoke vent with insulated upstand at the top of common access protected stairway enclosures. Natural smoke and heat exhaust ventilators in accordance with IS EN 12101. Type: Glazed. Shape:: Square units generally. Note: In instances where the ceiling opening is to be circular. the AOV is to be oversized as a square unit to ensure that the minimum free area requirements are achieved within the circular area. Ventilation requirements:: Minimum free area of 1m2, in accordance with Para 6.2.1 of the TGD- B: 2024. Mounted to structural steel architectural details for integration with roof membrane / waterproofing as specified in Section J10. Operation: The vents will be automatically opened by the fire detection and alarm system, on activation of smoke detectors in the stairway enclosure/ on activation of the smoke control system as specified by Mechanical & Electrical Engineer, and will also be manually openable for fire brigade use. The manual override will be provided at ground/fire service entrance level to the stairs and the provided with clear signage as to its function and operation, for fire service use only. AOV's will comply with IS EN 12101-2. Where any part of the control mechanism is powered by electricity, a secondary supply will be provided. Integration of control system: Refer to Mechanical & Electrical Engineer specfications and drawings. Finish as delivered: Principal components polyester powder-coated. Seals: Glass silicone seal joint. Two double seals around perimeter using EPDM rubbers. Guards: Security. Typical U-value: 1.4W/m. Air permeability: : Class 4 in accordance with EN 12207. Watertightness: Class 7A in accordance with EN 12208. Glazing details:: Fire rated A1 in accordance EN 13501. Accessories/ special features: Smoke Control System: As required to complete the commissioning of the smoke control system including, but not limited to the following: -Fireman's override switches, -Key switches -MCC Panel, -Pressure sensors. Refer to Mechanical & Electrical Engineers drawings and specifications for more details. Include for hoisting and fixing to and including top of upstands. Include also for all necessary airtight seals, EPDM, flashings, mastic pointing, insulation, side vents, fixing brackets etc. complete to composite built up flat roof, all in accordance with the manufacturers instructionsv.All as per Architects drawings and Specification Section L10/490A					
A	AOV 3 - 1,500mm x 1,500mm	1	no			

To Collection €

	Description	Qty	Unit	Rate	€	c
A	Extra over for supply and fixing of matching aluminium pressed metal flashing to perimeter of AOV. Include for all necessay treated grounds, brackets, EPDM, lapped with roof membrane, sundry mineral wool insulation, etc. complete all per Architect Drawing 391 and Specification. Girth 450mm - 600mm - 4 times cranked	8	m			
B	Extra over for providing for Roof Access: Maintenance access will be provided to the roof via AOV. Include for Ladder hook fixings will be required as fixing point for temporary ladder when in use.		Item			
	AOV to top of Smoke Shaft					
	Automatically operating opening vents at the top of smoke shafts provided in existing building as part of smoke extract system to achieve compliance with TGD Part B. Specialist Design Requirements: Ventilators are to be designed and commissioned by specialist sub-contractor in accordance with requirements outlined in Mechanical & Electrical drawings and specifications. Standard: Natural smoke and heat exhaust ventilators in accordance with IS EN 12101. Type: Flap. Shape:: Rectangular (max:2-1 ratio). Ventilation requirements:: To be specified by specialist subcontractor to achieve compliance with TGD Part B. Mounted to Reinforced concrete / blockwork upstands (elsewhere measured) Include for integration with roof membrane / waterproofing as specified in Section J10. Integration of control system: Refer to Mechanical & Electrical Engineer specifications and drawings. Finish as delivered: Principal components polyester powder-coated. Typical U-value: 1.4W/m. Air permeability: : Class 4 in accordance with EN 12207. Watertightness: Class 7A in accordance with EN 12208. Fixing: As per manufacturers recommendations. Include for hoisting and fixing to and including top of upstands. Include also for all necessary airtight seals, EPDM, flashings, mastic pointing, insulation, side vents, fixing brackets etc. complete to composite built up flat roof, all in accordance with the manufacturers instructions. All as per Architects Drawings and Specification Section L10/490B					
C	circa 800mm x 1300mm on plan	2	no			
D	Extra over for supply and fixing of matching aluminium pressed metal flashing to perimeter of AOV. Include for all necessay treated grounds, brackets, EPDM, lapped with roof membrane, sundry mineral wool insulation, etc. complete all per Architect Drawing 391 and Specification. Girth 450mm - 600mm - 4 times cranked	13	m			

To Collection €

	Description	Qty	Unit	Rate	€	c
	Edge Guarding					
	Composite Items. Grade 316 Stainless Steel					
	Parapet Handrail;- Side fixed metal balustrade installed to inner face of existing masonry parapet to raise the guarding height level to 1100mm above External FFL. Contractor Responsibility: Contractor is to complete the design and determine the type, sizes and numbers of fixings to meet design intent on Architect's drawings and schedules. System manufacturer: Submit proposals. Performance: As clause 220. Guarding; Material: Grade 316 Stainless steel. Rail Cross section: Refer to architectural drawings for design intent. Material: Grade 316 Stainless steel. Finish: Milled. Verification: Submittals; all as per Architects Drawing 915 and Specification Section L72/160A & Q41/250					
A	1,100mm high above finished Roof Level	28	m			
	Extra over for;					
B	Corners	1	no			
C	Ends	4	no			
	Access Ladder					
	Provide Ladder for access to AOV in convent. Type: Access Ladder with lockable security panel. Contractor Design: The contractor shall be responsible for design of access ladder to meet safe access & maintenance requirements. Access Strategy: Ladders in permanent position with lockable security panel. Manufacturer: Submit proposals. System reference: Submit proposals. Position and dimensions: To suit access to AOV, submit drawing proposals. All per Architects Specification N25/131					
D	Internal Ladder to access Upper Roof Level Circa 3,500mm high	1	no			
E	External Ladder to access Upper Roof Level Circa 2,000mm high	1	no			

To Collection €

	Description	Qty	Unit	Rate	€	c
	Fall Arrest System					
	Continuous fall arrest system to perimeter of flat roof					
	Fall Restraint system to all roof areas. Manufacturer: Skyway or Equivalent. Product reference: Kee Line (Kee Line) or Equivalent. Pre-installation survey: Coordinate with main contractor. Structural anchors: Structural anchors for membrane roofs. Anchor line: Stainless steel wire ropes. Ancillary equipment: Provide harness and lanyard compatible with system. Standards: To EN 795 2012; OSHA Code 1910.140(c)(11-22); CEN TS 16415:2013; ANSI Z359; CSA Z259; AS/NZS 1821. Anchorage device: Horizontal stainless steel cable. Anchorage substrate: Roof as J41.110. contractor to ensure fall arrest system design is compatible with roof waterproofing system. Overall system length: To suit access requirements on roof - contractor submit design proposal. Intermediate support spacing: To specialist contractor's design. Accessories/ Other requirements: -To include permanent vertical fall arrest system at ladder access points. Temporary access ladder and fixing points. Installation: In accordance with BS 7883 by the system manufacturer or a contractor approved by the system manufacturer. all in accordance with the Architect's Specification N25/210A & Drawing 414					
A	Stainless steel cable attached to and including Constant force posts bolted to flat insulated roof with Plywood deck.	43	m			
	Supply the following personal protective equipment. To be used by trained personnel only;					
B	Full body harness with front and rear attachment devices	2	no			
C	Standard 2m shock absorbing lanyard	2	no			
D	10m rope and grabs	2	no			
E	Attachment shuttles	2	no			
	Allow for the following items as specified					
F	Engineers certificates	1	item			
G	test certificate (covering 12 month period) and compliance notice attached to system at access point	1	item			
H	operating instructions and markings	1	item

	Description	Qty	Unit	Rate	€	c
	FLOOR, WALL AND CEILLING FINISHINGS: In-Situ Finishes					
	External Render - Lime plasters Diathonite					
	Re-rendered with a breathable insulating lime render. Ensure existing Masonry is free of all mortar, debris and dust in advance of re-rendering. Masonry to be dampened down prior to application. Cork lime render to be applied to a minimum depth for each coat as detailed in the architectural specification. Minimum curing period of 24 hours between each coat. Coats to be applied using mechanical system. Where undulations occur in the wall, minimum coverage depth is to meet 40mm. Where this results in sections deeper than 50mm a plaster mesh shall be used to improve adherence of coats. The insulating lime render referred to in this specification shall comprise a breathable lime-based binder incorporating cork aggregate, designed for use on historic masonry. The system shall be vapour-permeable, capillary active, and compatible with the existing substrate. The render build-up shall include: -lime-based binder appropriate to the exposure conditions, -cork aggregate for thermal enhancement, -non-corroding reinforcement mesh where required, -total thickness limited to that necessary to achieve performance without compromising historic detailing. The use of metal beads is not permitted. All per Architect's Drawings and Spec M20/240 and Conservation Architect's Specification 3.17					
	Existing External Masonary Wall - 30mm externally - overall to achieve U-Value of 0.44W/m2k					
A	> 300mm wide	964	m2			
B	> 300mm wide (Inner face of Parapet Wall)	36	m2			
C	< 300mm wide to reveals	279	m			
D	< 300mm wide Arched Window Head	20	m			
	Extra over for forming New Matching Mouldings mainly to Front Elevation: Include for recording existing Moulding Profiles to be recreated in new render.					
E	Forming Plinth 800mm high	30	m			
F	Horizontal Band Moulding at 1st Floor Level approx. 300mm wide	28	m			
G	Ditto at Roof Level approx 150mm wide	28	m			
H	Ditto at Roof Level approx 100mm wide	28	m			
J	Ditto to bell tower at high level approx 100mm wide	10	m			

To Collection €

	Description	Qty	Unit	Rate	€	c
A	Ditto under Underside of Parapet Capping approx 100mm wide	28	m			
B	Vertical Band Moulding to surrounds of windows at 1st Floor Level approx. 250mm wide	45	m			
C	Ditto of windows to Bell Tower approx. 100mm wide	11	m			
D	Curved Band Moulding to arched heads of windows at 1st Floor Level approx. 250mm wide	17	m			
E	Ditto of windows to Bell Tower approx. 100mm wide	4	m

	External Wall to Ground Floor Extension					
	Vertical timber weatherboarding					
	Secret fix timber cladding to external face of GF extension at convent building. Fire performance. Standard:: As clause 220. Include for Gutex Multitherm or equivalent hydrophobized tongued and grooved insulation board (compressive strength 70kPa/tensile strength 7.5kPa/thermal conductivity 0.040W/mK), Thermal insulation: Gutex thermoflex or equivalent flexible wood fibreboard insulation board (thermal conductivity 0.036W/mK). Breather membrane: As clause 130. Treated Counter battens aligned with studs. Treated Battens at 400 mm centres. Boarding; Standard: To IS EN 14915, EN 942:2017. Quality of timber (exposed surfaces):. Use class: EN 335, Class 4. Apperance class: EN 942: Class J2. Species: Quercus Robur (European white oak heartwood). or equivalent suitable hardwood as per Appendix C of BS1186 - Submit proposals to Architect for approval prior to order. Finished face dimension (overall width): Refer to architectural drawings. Finished thickness: 25 mm. Moisture content at time of fixing: 13-19%. Treatment: Standard:: To I.S. EN 350:2016 Class 1. Service life: 30 years. Method of fixing to each support: Grade A2 stainless steel screws (SIHGA or equivalent), predrilled, at 300mm centres; All in accordance with Architect's Drawings 317 and Specification Clause H21/110					
A	> 300mm wide	15	m2			
B	< 300mm wide	3	m			
	Extra Over for					
C	Corner Detail per Architect's Drawing 317	8	m			
D	Connect Detail with Existing Building including forming shadow gap per Architect's Drawing 317	8	m			
E	Powder Coated Aluminium Flashing to close cavity, include for all fixings, sealants etc. complete per Architect's Drawing 317	20	m			
F	Insect Mesh to head of Door / Screen ope include for all fixings, sealants etc. complete per Architect's Drawing 317	13	m			
G	Lead Flashing < 150mm girth to head of Door / Screen ope include for all fixings, sealants etc. complete per Architect's Drawing 317	13	m			

Description	Qty	Unit	Rate	€	c
External Wall to Roof Level Extension Rendered external wall insulation system by Tradecraft Limited or equivalent. Reaction to Fire system performance in line with BS EN 13501-1: A2. Board adhesive:: Pariso Mince Caliso Adhesive Coat, to be applied either as a complete coverage to the insulation board or as a ribbon around the board and a minimum of 3 dabs across the centre line to give a minimum of 40% coverage once applied. Take care to ensure no adhesive encroaches between insulation boards to prevent the risk of thermal bypass to be applied no more than 15mm in thickness. Insulation: Mineral wool to BS EN 13162. Thermal conductivity:: 0.036 W/Mk. Board size: 1200 x 600mm. Density: 110 kg/m3. Minimum compressive strength: Compressive Strength 10 kPa. Method of fixing: Mechanical Fixing. Insulation - base plinth level: XPS insulation suitable for wet areas. Thermal conductivity:: 0.033W/mK. Mechanical fixing:: Rawlplug KI10 Masonry Anchor. Fixing type is hammer fixing with expansion pin. Length to be minimum of 135mm (insulation thickness + board adhesive thickness + existing render thickness + 35mm minimum embedment). Fixing length and quantity may change subject to pull out test results and wind loads for the building. Base coat:: Pariso Mince Maite to be applied 4 to 6mm. Ensure base coat is fully adhered to insulation, covers all fixing heads and all appropriate beads. Should the Pariso Mince Maite be required in two passes, ensure second pass is applied minimum 24 hours after the first.					

	Description	Qty	Unit	Rate	€	c
	Ensure IAVPC Mesh is no more on third in from the front line of Pariso Mince Maite base coat. Reinforcing Mesh: IAVPC Mesh. Mesh weight 160g/m2. Minimum edge overlap at joints 100mm. When installing, ensure it is encapsulated in the outer third of the Pariso Mince Maite base coat. At the corners of all opening install a mesh patch 300 x 300mm at 45 degrees to the main mesh layer. Install a mesh patch over all penetrations at 45 degrees to the main mesh layer ensuring a minimum 150mm edge distance from the patch to the penetration. For high impact areas install the following (no overlap at joints) prior to the application of the IAVPC Mesh. Primer:: Revlane+ Regulatuer: Acrylic dispersion priming coat, Colour as per decorative finish coat to be roller, brushed or spray applied ensuring 100% coverage of Pariso Mince Maite base coat in one coat. Coverage 0.25kg per m2. Allow 2 to 12 hours, depending on temperature and humidity, prior to the application of the finish coat. Decorative finish:: Revlane+ Siloxane Ignifuge. Grain size 1.6mm, Taloche Gros, Colour as per project design. To be applied using a plastic float and textured as per the sample reference panel. When applying it is important to keep a wet edge on the material. Coverage 8 to 10m2 per tub. Include for all necessary Beads/ trims & Base Track; Mill finished aluminium box base track. Length 2.5m All adjoining lengths to be connected using connection clips to facilitate line and level and linear expansion. All corners to be mitred, not butt jointed. Fixed at maximum 300mm centres back to the substrate. Include also for all necessary Gun applied sealant Sika EB25 to be applied as a surface sealant at all junctions, UpVC Frame seal bead with mesh wing etc complete; All in accordance with the Works Requirements and in particular Architects Specification Clause M21/210					
	To Lightweight SFS External Walls to Roof Level Extension - To achieve U-Value of 0.17W/m2K					
A	> 300mm wide	86	m2			
B	< 300mm wide to reveals	5	m			
C	< 300mm wide reveals to Circular Windows approx. 900mm diameter	15	m			
D	Extra over for neatly working around support steel beams for Brise Soleil, incl for all necessary seals, flashings etc complete.	9	No.			
	To Face of Reinforced Concrete Upstand to underside of Curtin Walling to Roof Level Extension - To achieve U-Value of 0.17W/m2K					
E	< 300mm wide	22	m			

	Description	Qty	Unit	Rate	€	c
	Sundries					
	Plaster Beads / Stops for external use; STANDARD: In accordance with BS EN 13914-1, Table 4; ; all in accordance with the Works Requirements and in particular Architects Specification Clause M21/120					
	uPVC Beads					
A	Angle beads; thin coat corner bead with mesh wings (100 x 150mm mesh wing)	7	m			
B	Render stop bead:: 6mm Render Stop Bead	138	m			
C	6mm Surface Mounted Movement Bead	11	m			
	Stainless steel Beads					
D	Vertical full depth movement bead	15	m			
	Aluminium Beads					
E	Horizontal movement bead	58	m			
	Cill / Flashings					
F	Aluminium flashings / Cill. Polyester Powdercoated with anodic paint finish. 300mm - 450mm girth, 3 times cranked. Include for insulation, EPDM to P10/310, and EPDM carrier, support brackets etc. complete all as per Architectural drawing 310 and Specification H72.	35	m			
G	Corners	2	no			
H	Ends	2	no			
	Decoration					
	Breathable paint suitable for external use on lime plaster. Manufacturer: Auro or Equivalent. Product reference: Ecolith or Equivalent. Surfaces: Diathonite lime plaster. Preparation: Clean down all surfaces. To manufacturer's recommendations. Standard: EN1504-2. Initial coats: Prime with AURO Plaster Primer - to manufacturer's recomendation. Colour: Allow for full colour range. Finishing coats: 3 coats of Auro Ecolith. All in accordance with the Works Requirements and in particular Architects Specification M60/ 110 and Conservation Architects Specification 3.18

	Stud Partitions (Fire rated where specified))					
	Metal Stud Partition System REI60 Shaftwall					
	60 min fire rated partition for use forming compartment walls where access is available to one side only during construction. Partition type: Shaft wall - 2 x 12.5mm Gyproc fireline to room side and Gyproc coreboard between studs secured by gypframe retaining channel. 25mm isover acoustic roll in cavity. Centres: As per manufacturers guidelines to achieve require performance. Head condition: Existing reinforced concrete ribbed slabs. Deflection allowance: 25 mm maximum. Structural performance: Strength grade: To BS 5234-2, Grade 'Medium duty' (MD). Pattressing: 12 mm Plywood to be installed between studs between 600 mm and 1200 mm. Other requirements: Allow for weight of ceramic tiles, as section M40. Fire performance: Reaction to fire: A2 - s3, d2. Fire resistance of complete partition assembly: To IS EN 13501-2, REI 30. Fire performance partitions identification: Install fire performance labels to all new fire-rated partitions. Fire separation. Services integration: The integrity of partition should not be breached to allow for the installation of services, e.g. pipes, wires, flues etc except where necessary to allow services pass through these compartment walls. Where services pass through these compartment walls or floors, they should be contained in fire-resistant ducts, and the opening of such ducts should be protected and fire-stopped. Baffle boxes are not accepted. Acoustic performance. Standard: IS EN ISO 717. Weighted sound reduction index Rw (minimum) to BS EN ISO 717-1: 53. Metal framing: Type recommended by board manufacturer to complete the partition assembly and achieve specified performance. Insulation: As recommended by board manufacturer to meet specified performance. Resilient layer: As recommended by board manufacturer to meet specified performance. Linings: Two layers 15 mm plasterboard as clause 404. - Unless otherwise recommended by board manufacturer to meet specified performance. Finishing: Skim coat plaster as clause 680. Primer/ Sealer: Primer to painted areas. Accessories: Beads/ stops as recommended by board manufacturer. Other requirements: Fire-stopping around services as section P12. Complete all per Architect's drawings & specification K10/115F.					
A	Height average 3,600mm	19	m

	Tile Finishes					
	Supply and fix Ceramic tiles to plastered walls. Calibrated modular tiles to EN 12057 Setting out: 600mm high above worktop level. Tiles: Colour: White. Finish: Flat gloss, glazed ceramic with glazed edge. Size: 150 x 150 mm. Thickness: 6mm. Include for Background/ base: Tilebacker board (refer to K10.410). Preparation: Primer to manufacturer's instructions. Bedding: Thin bed adhesive as clause 651. Adhesive: to EN 12004: C2TES1 Mapei Keraflex Maxi S1 or equivalent C2TES1 flexible adhesive. Joint width: 2?3mm subject to tile size. Grout: Mapei Keracolour FF or equivalent flexible grout. Type/ classification: To EN 13888 CG2 WA. Movement joints: Mapei MAPESIL AC or equivalent silicone to match wall grout as clause 815A, located in accordance with BS 5385?3 2007 Section 6.8: around perimeters, wall/floor junctions and up to maximum 8m bay width. Proprietary seal at junction between tile and worktop Accessories: Skirting and Edge Trims, with proprietary square edged satin finish aluminium stop & edge beads. (elsewhere measured) all as per manufactures recommendations and Architect's Drawings and Specification M40/110B					
	To Kitchens

G	Tiled access hatches 300mm x 300mm as specified in K10.430	36	No			
H	Mapei MAPEGUM WPS or equivalent waterproof tanking system including Mapei MAPEBAND or equivalent compatible tanking tape at internal corners, joints, floor/wall junctions, pipe penetrations etc	231	m2			

	Description	Qty	Unit	Rate	€	c
	Internal Render - Lime plasters Diathonite					
	Re-rendered with a breathable insulating lime render. Ensure existing Masonry is free of all mortar, debris and dust in advance of re-rendering. Masonry to be dampened down prior to application. Cork lime render to be applied to a minimum depth for each coat as detailed in the architectural specification. Minimum curing period of 24 hours between each coat. Coats to be applied using mechanical system. Where undulations occur in the wall, minimum coverage depth is to meet 40mm. Where this results in sections deeper than 50mm a plaster mesh shall be used to improve adherence of coats. The insulating lime render referred to in this specification shall comprise a breathable lime-based binder incorporating cork aggregate, designed for use on historic masonry. The system shall be vapour-permeable, capillary active, and compatible with the existing substrate. The render build-up shall include: -lime-based binder appropriate to the exposure conditions, -cork aggregate for thermal enhancement, -non-corroding reinforcement mesh where required, -total thickness limited to that necessary to achieve performance without compromising historic detailing. The use of metal beads is not permitted. All per Architect's Drawings and Spec M20/240 and Conservation Architect's Specification 3.17					
	Existing External Masonary Wall - 25mm internally - overall to achieve U-Value of 0.44W/m2k					
A	> 300mm wide	1437	m2			
B	< 300mm wide to reveals	322	m

(42) WALL FINISHES INTERNALLY **Carried to Summary**					

Description	Qty	Unit	Rate	€	c
(43) FLOOR FINISHES					
INFORMATION					
This element of the work has been measured from Architects Drawings		Note			
This Element and the Architects and Engineers drawings and specifications are all complementary to each other and should be read in conjunction with one another.		Note			
For detailed description of workmanship and materials see specification.		Note			
The tenderers should examine the Architects and Engineers drawings and specifications and satisfy themselves as to the nature and extent of works outlined below and should include for all costs in connection with same.		Note			
Notes:					
1. Power floated and screeded concrete floor slabs are to be finished to a sufficient level to obviate the necessity for the spreading of levelling compounds for all floor coverings measured within this element. Should it arise that it becomes necessary to spread levelling compounds as a preliminary to laying the floor finishes, the cost of this work will be deemed to be included in the prices against the various items of work of floor finishes					
2. The Contractor is to include in his tender for properly curing and drying out concrete ground floor slabs within the limits of the building programme to attain minimum moisture content as recommended by the manufacturers of the relevant sheet and brush applied floor coverings measured within this element; if these moisture levels are not achieved at the time of laying, then the contractor will be required to apply an approved patent trowel applied damp proof membrane over the slab and patent self levelling screed over same at his own expense					
3. The Contractor is solely responsible for ensuring that the concrete floor slabs are sufficiently dried out before any floor finishes are laid.					
4. The Contractor is to include for any required protection of Acoustic Underlay and Floor Finishes prior to handover					
			To Collection €		

	Description	Qty	Unit	Rate	€	c
	Raised Access Floor					
	Raised access floor to third floor extension of convent building. Standard: To BS EN 12825. Preparation: Existing roof finish to be stripped and concrete inspected by Structural Engineer. Floor panels: As clause 315. Accessibility: Partial; submit proposals. Pedestal fixing: Mechanical. Structural performance. Static loading requirements. Structural load class: To IS EN 12825 Class 4. Deflection class: To IS EN 12825 Class B. Fire performance: As clause 234. Installed mass of system (maximum): Refer to Structural Engineers drawings and specifications. Height; Finished raised access floor height above subfloor: Nominal 355mm - note that SSL of existing roof slab is to be confirmed following strip out. Floor void height: 325mm nominal. Floor void air leakage: Limited, as clause 249. Peel resistance of covering: Required, etc complete, all per Architect's Drawings and Specification K41/120					
	Laid on existing concrete roof slab, after removal of rood finish.					
A	To floors > 300mm wide	134	m2			
	Extra Over for;					
B	Neatly Cutting around M&E Services etc.		Item			
C	Prepare existing concrete roof deck after removal of existing roof finish to recieve raised access floor, including appling dust-proofing sealer	134	m2			
	Levelling Compound					
	Cement based, all as per Architects Drawings and Architects Specification.					
	Laid on existing concrete floor base					
D	To floors > 300mm wide	768	m2			
	Moisture control underlay					
	Underlay with built in moisture barrier to act as Damp Proof Membrane all as per Architects Drawings and Architects Specification.					
	Laid on existing concrete floor base					
E	To floors > 300mm wide	342	m2			

	Description	Qty	Unit	Rate	€	c
	Wood Flooring					
	Wood Floating Flooring on clips on new / existing concrete floor slab Preparation: levelling compound unless flatter than 3mm along 3m straightedge. Resilient layer: Junkers Polyfoam or equivalent 4.5mm bonded to slab and providing resistance to impact sound as required by TGD E, Building Regulations. Strips/ Boards. Standard: To IS EN 14342. Evidence of compliance: Submit. Reaction to fire: To IS EN 13501-1 Class Bfl-s1. Wood species: European Oak Quercus Petraea. Appearance class: To IS EN 942 class J2. Finished face width: 185 mm. Finished thickness: 21 mm. Edges: Tongue and grooved with a 1mm eased edge and wax edged sealed. Moisture content at time of fixing: 7.5% + manufacturing tolerance. Method of fixing/ joining: proprietary clips; size of clips to be determined by supplier based on relative humidity advised for the building. Finish: Factory finished with several coats of UV light cured lacquer and one coat of two component polyurethane Isolacquer UltraMatt Lacquer (10% gloss), total film thickness 45 microns. Additional coat on site. Accessories: -Access Hatches, -Floor outlets: refer to M+E specification, -Note screeds must be levelled where required. Include for underlay, etc complete, all per Architect's Drawings and Specification K21/110					
	Laid on existing concrete floor base					
A	To floors > 300mm wide	216	m2			
	Extra Over for;					
B	Neatly Cutting around M&E Services etc.		Item			

	Description	Qty	Unit	Rate	€	c
	Vinyl Sheet Flooring					
	Vinyl sheet flooring generally: Forbo or Equivalent. Product reference: Sphera Energetic to IS EN 14041 & EN ISO 10582. Preparation: As per manufacturer's recommendations. Underlay: Acoustic Underlay to achieve TGD E requirement: Weighted sound reduction in impact sound pressure level of not less than 17dB when measured in accordance with EN ISO 717-2. Properties. Reaction-to-fire classification: To EN 13501-1, BfI-s1. Use area class to BS EN ISO 10874: Class 34 / 33. Slip potential. Slip resistance value (SRV)/ pendulum test value (PTV) (minimum): DIN 51130, R10; EN 13893, DS ?0.30. PTV dry >50. Acoustic performance: Impact resistance to IS EN ISO 10140-3, ?Lw 18 dB. Width: 2000 mm. Thickness: 2mm. Adhesive: Primer: As per manufacturer's recommendations. Seams: As per manufacturer's recommendations. Finishing: As per manufacturer's recommendations. Other requirements: Warranty: Ten year. Verification. Submittals:. Include for underlay, etc complete, all per Architect's Drawings and Specification M50/150A					
	Laid on existing concrete floor base					
A	To floors > 300mm wide	27	m2			
	Extra Over for;					
B	Edging trim for thresholds, as clause 740	3	m			
C	Matching Coved Skirtings, as clause 770	35	m			
D	On Raised Access Floor (as shown on architectural details - 3rd Floor of Convent) - Include for 12mm Cement Board substrate	15	m2			
E	Neatly Cutting around M&E Services etc.		Item			

	Description	Qty	Unit	Rate	€	c
	Linoleum Sheet Flooring					
	Linoleum sheet flooring generally by Forbo Flooring Systems or equivalent. Product reference: Marmoleum Decibel Sheet Flooring. Standard: To BS EN 686. Use class: Class 23, 33; 41. Slip potential. Slip resistance value (SRV) (minimum)/ pendulum test value (PTV) (minimum): DIN 51130= R9., PVT Dry: ?50, EN 13893: ? ?0.30. Recycled content: 46%. Width: 2000 mm. Thickness: 3.5 mm. Residual indentation (to EN-ISO 24343-1): ?0.2 mm. Castor chair continuous use (to ISO 4918/ EN 425): Suitable for office chairs with castors. Light fastness to EN-ISO 105-B02: Method 3: blue scale minimum 6. Acoustical impact sound reduction (to EN-ISO 717-2): ?18 dB. Reaction to fire (to EN 13501-1): Cfl-s1, G, CS. Body voltage (to EN 1815): ? 2 kV. Thermal conductivity (to EN 12524): 0.17 W/m K. Indoor Air Emissions (to EN 16516): TVOC at 28 days: <0.05 mg/m3. Total weight:: 3100 g/m2. Verification: Submittals. Include for underlay, etc complete, all per Architect's Drawings and Specification M50/150B					
	Laid on existing concrete floor base					
A	To floors > 300mm wide	304	m2			
B	To Stair Landings > 300mm wide	96	m2			
C	To Steps < 300mm wide	28	m			
	Extra Over for;					
D	Edging trim for thresholds, as clause 740	120	m			
E	Stair nosings, as clause 750	56	m			
F	On Raised Access Floor (as shown on architectural details - 3rd Floor of Convent) - Include for 12mm Plywood substrate	110	m2			
G	Neatly Cutting around M&E Services etc.		Item			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Carpet Tiling					
	Tretford or Equivalent. Product reference: Interlife or Equivalent to IS EN 14041 Carpet tiles to offices and staff accommodation to Existing concrete slab / Raised access floor on third floor. Preparation: As clause 420. Underlay: Bonded. Properties. Reaction-to-fire classification: To BS EN 13501-1, Class Bfl. Type: Carded fibres formed into a continuous corrugation and bonded to a 100% postconsumer recycled PET backing. Composition: Pile composition is 70% undyed goat hair and 30% nylon. Classification to BS EN 1307. Levels of use class: 33. Luxury rating class: LC2. Method of laying: full?spread glued or installed using tack strips. All adhesive should be free of solvents and VOC. , complete, all per Architect's Drawings and Specification M50/130A					
	Laid on existing concrete floor base					
A	To floors > 300mm wide	149	m2			
	Extra Over for;					
B	Brushed stainless steel edge trim as CAT SSE or equivalent	65	m			
C	Acoustic underlay (refer Clause M40/115)	149	m2			
D	Carpet roll to residential areas	45	m2			
E	On Raised Access Floor (as shown on architectural details - 3rd Floor of Convent) - Include for 12mm Plywood substrate	18	m2			
F	Neatly Cutting around M&E Services etc.		Item			

	Description	Qty	Unit	Rate	€	c
	Ceramic Tiling					
	Calibrated modular tiles to EN 12057. Setting out: To Architect's drawings. Tiles: TopCer or equivalent. Product Reference: 15x15 Square RT. Colour: Allow for colours in Series 1, 2, 3 & 4. Finish: RT - textured. Size: 150 x 150 mm. Thickness: 7-7.5mm. Slip potential. Slip resistance value (SRV) (minimum)/ pendulum test value (PTV) (minimum) to BS EN 16165 or BS EN 14231 (natural stone only): 36+ wet. Surface roughness (Rz) (minimum) to BS 1134: R11. Preparation: Primer to manufacturer's instructions. Bedding: as clause 651. Adhesive: to EN 12004: C2TES1 Thin bed flexible adhesive compatible with laying on acoustic underlay - Damstik or equivalent. Joint width: 2?3mm subject to tile size. Grout: Mapei Keracolour FF or equivalent flexible grout. Type/ classification: To EN 13888 CG2 WA. Movement joints: Mapei MAPESIL AC or equivalent silicone to match wall grout as clause 815A, located in accordance with BS 5385?3 2007 Section 6.8: around perimeters, wall/floor junctions and up to maximum 8m bay width, complete, all per Architect's Drawings and Specification M40/110C					
	Laid on existing concrete floor base					
A	To floors > 300mm wide	100	m2			
	Extra Over for;					
B	Edging trim for thresholds	25	m			
C	Acoustic underlay (refer Clause M40/115)	100	m2			
D	Matching Coved Skirting Tile	151	m			
E	On Raised Access Floor (as shown on architectural details - 3rd Floor of Convent) - Include for 12mm Plywood substrate	5	m2			
F	Neatly Cutting around M&E Services etc.		Item			
	Floor Drain					
G	Floor grate drain as per Architects Specification and drawings. Include for breakout of concrete floor and making good after. Include also for neatly finishing Vinyl floor finish to gulley, etc. complete. all per architect's drawings and Specification.	1	nr			
	Separation Strips					
H	Satin stainless steel separation strip	76	m			

	Description	Qty	Unit	Rate	€	c
	Testing, Surveys, Samples & Warranties					
	Include for all testing, surveys, samples & warranty requirements as set out in the Architects works requirements					
A	Testing		Item			
B	Surveys		Item			
C	Samples		Item			
D	Warranties		Item			
	Include for all testing, surveys, samples & warranty requirements as set out in the Engineers works requirements

	(35) & (45) SUSPENDED CEILINGS & FINISHES					
	INFORMATION					
A	This element of the work has been measured from Architects Drawings 415-418, 483-487					
B	The Architects drawings and specifications are all complementry to each other and should be read in conjunction with one another.		Note			
C	The Contractor is advised that the Works Requirements and Pricing Documents are all complementary to each other and should be read in conjunction with one another.		Note			
D	For detailed description of workmanship and materials refer to specification.		Note			
	Floor Wall & Ceiling Finishing: Suspended Ceilings					
	NOTES:					
E	1. The Tenderers attention is drawn to the fact that the rates for suspended ceilings should include for all perimeter members to columns, wall projections or the like; rates are to include for all fixings to complete the works		Note			
F	2. The Contractor is advised that the following measurement and descriptions are to be read in conjunction with the Architects Drawings and Specifications listed as tender documents within the Preliminaries Section of the Bill of Quantities		Note			
G	3. Work areas not exceeding 4.0 sq.m on plan have not been measured separately and Contractors shall make due allowance in their rates		Note			
H	4. Rates are to include for all labours in connection with the following work including accurately setting out and fitting of suspended ceilings around surface features		Note			
	Rates for suspended ceilings are to include for:					
	a) Notching and cutting around columns or the like or at the edge of the works unless measured separately					
	b) Any items necessary for the satisfactory completion of the works					
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Suspended Ceiling System					
	Suspended ceiling system for use generally with gypsum plasterboards, to IS EN 13964. Evidence of compliance: Submit Declaration of Performance (DoP) & evidence of CE marking. Lining board: -12.5 mm plasterboard as clause 401 generally . Finishing: Skim coat plaster as clause 680. Primer/ Sealer: Primer to painted areas. Type recommended by lining board manufacturer for vapour control in in bathrooms. Accessories: Beads/ stops as clause 692. Suspension system: As recommended by lining manufacturer to complete the ceiling system and achieve specified performance. Grid type: Double with primary channel. Hangers: Type recommended by board manufacturer. Length: To give ceiling soffit height above finished floor level of 2700 mm - unless otherwise specified on architectural drawings. Access units: Required as clause 431 - As indicated on architectural drawings. Integrated services fittings: Refer to Mechanical & Electrical Engineers drawings and specifications. System performance to IS EN 13964. Structural: The ceiling system must safely support all anticipated loads including services fittings. Uniformly distributed load (maximum): 0.6 kN/m2. Additional loads/ pressures: luminaires and other M+E fittings-refer to M+E drawings and data sheets to be provided by specialist contractors. Deflection of grid between points of support (maximum): 0.0025 x span. Fire performance. Reaction to fire: Class B - s3-d2. Airborne sound insulation (complete floor and ceiling assembly). Weighted sound reduction index, Rw (minimum), to BS EN ISO 717-1: 50 dB, complete all as per Architects Drawings and Specification Clause K10/215					
	Fixed to Underside of Timber Flat Roof Structure					
A	depth of suspendion 150 - 500mm	142	m2			
B	Ditto to sides of lightwell to AOV over Staircore	14	m2			
	Fixed to Underside of Existing Ribbed Concrete Floor / Roof Slab					
C	depth of suspendion 150 - 500mm	533	m2			
D	Raking to underside of existing concrete stairs	62	m2			

	Description	Qty	Unit	Rate	€	c
	Ditto with 12.5 mm moisture-resistant plasterboard to EN 520, type AH1 as clause K10/403 for use in bathrooms and other wet /humid environments as indicated on architectural drawings.all as per Architects Drawings and Specification Section K10					
	Suspended Ceilings					
A	depth of suspension; 150 - 500mm	187	m2			
	Suspended ceiling system for use generally with gypsum plasterboards, to IS EN 13964. Evidence of compliance: Submit Declaration of Performance (DoP) & evidence of CE marking. Lining board: -12.5 mm plasterboard as clause 401 generally . Finishing: Skim coat plaster as clause 680. Primer/ Sealer: Primer to painted areas. Deflection of grid between points of support (maximum): 0.0025 x span. Fire performance. Reaction to fire: Class B - s3-d2. Airborne sound insulation (complete floor and ceiling assembly). Weighted sound reduction index, Rw (minimum), to BS EN ISO 717-1: 50 dB, complete all as per Architects Drawings and Specification Clause K10/220					
	Fixed to Underside of Timber Flat Roof Structure					
B	depth of suspendion 150 - 500mm	55	m2			
	Fixed to Underside of Existing Ribbed Concrete Floor / Roof Slab					
C	depth of suspendion 150 - 500mm	40	m2			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Insulation (Air tightness)					
	Vapour Control Layer Air Tight & Humidity-Variable Pipe Gasket, Material: Polypropylene copolymer backing fleece, PP copolymer special membrane, sealing ring: EPDM; Adhesive: waterproof solid adhesive; all as per Architects specfication and drawing in:					
A	Grommet size 200 mm	30	no			
B	Ditto - 250 mm	25	no			
C	Ditto - 300 mm	15	no			
D	Ditto - 350 mm	12	no			
	Fire Barriers					
	'Letterbox' detail above doors					
	2 x 50mm thick mineral wool ablative coated batts to Specification Clause P12/360A, with acoustic intumescent seals to perimiter (both sides) to Specification Clause P12/390A; all to achieve 2 hour fire resistance, acoustic performance up to 48dB, Air leakage of 0.8 m3/h/m2; inclusive of all associated fixings; all as per Architects drawings and Specification section P12					
E	circa 450mm wide x 250mm high per Architects Drawings & Specification	15	no			
	Bulkheads / Boxouts					
	Bulkheads / boxouts; Foil backed plasterboard, include for all necessary carbon steel support framework, treated softwood support framework / battens, all joints scrimmed and finished with 3mm skim coat of finishing plaster. Also include for all necessary insulation, stainless steel angle beads, sealing etc. complete, all as per Architects Drawings and Specification					
F	Bulkhead; 25mm thick plasterboard Horizontal; as per Architects Drawing 447; circa 350mm wide x 300mm high	7	m			
G	Bulkhead; 25mm thick plasterboard Horizontal; as per Architects Drawing 498 & 499; circa 360mm wide x 500mm high	18	m			
H	Bulkhead; 25mm thick plasterboard Horizontal; as per Architects Drawing 449; circa 360mm wide x 800mm high	3	m			

	Description	Qty	Unit	Rate	€	c
	Access Hatches					
	1. Manufacturer: Submit proposals 2. Type: Concealed circular frame with beaded frame 2.1. Sizes: See ceiling plans - max diameter 600mm 3. Frame: Galvanised steel, polyster powder coated 4. Panel: Galvanised steel, polyster powder coated., colour TBC 5. Lock: Unitwist door hanging mechanism with restraining safety chain. Inclusive of all associated softwood timber support framework. All as per Architects Specification					
A	Circa 575mm diameter	60	No			
	1. Manufacturer: Submit proposals 2. Type: As recommended by lining manufacturer in clause 220 to complete the ceiling system and achieve specified performance 2.1. Sizes: See ceiling plans 3. Frame: Galvanised steel 4. Panel: galvanised steel for tiling with concealed pivot 5. Lock: budget lock					
B	400 x 400mm	16	No			
	Painting and Decorating					
	Prepare and apply; Dulux D154 or Equivalent. Surfaces: plasterboard. Preparation: Clean down all surfaces. Seal with thinned coat Trade Dulux Ecosure or equal and approved. Initial coats: One thinned Trade Dulux Ecosure Matt or equivalent. Finishing coats: One thinned Trade Dulux Ecosure Matt or equivalentand all in strict accordance with the Manufacturers Recommendations and Architects Finishes Schedule and Specification Clause M60/110A					
	Plastered Ceilings					
C	> 300mm wide	770	m2			
D	Ditto to sides of lightwell to AOV over Staircore	14	m2			
E	Ditto to Raking soffit of concrete stairs	62	m2			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Prepare and apply emulsion paint Dulux or Equivalent to plasterboard. Preparation: Clean down all surfaces. Seal with Dulux Plaster Sealer or equivalent. Initial coats: One thinned Dulux Bathroom Plus or equivalent (steam and moisture resistant soft sheen emulsion with 5 year mould resistant paint film). Finishing coats: Two coats Dulux Bathroom Plus, and all in strict accordance with the Manufacturers Recommendations and Architects Finishes Schedule and Specification Clause M60/110B					
	Plastered Ceilings					
A	> 300mm wide	187	m2			
B	< 300mm wide	7	m			
	Prepare and apply Farrow and Ball or Equivalent Casein Distemper paint - Breathable to existing Plastered plasterboard. include for Preparation to manufacturer's recommendations. Newly lime plastered surfaces should be fully carbonated and cured for 4-5 weeks prior to application. Initial coats: Finishing coats: Two coats Casein Distemper; and all in strict accordance with the Manufacturers Recommendations and Architects Finishes Schedule and Specification Clause M60/110C					
	Existing Plastered Ceilings & Cornicing					
C	> 300mm wide	50	m2			
	Testing, Surveys, Samples & Warranties					
	Include for all testing, surveys, samples & warranty requirements as set out in the Architects works requirements					
D	Testing		Item			
E	Surveys		Item			
F	Samples		Item			
G	Warranties		Item			
	Include for all testing, surveys, samples & warranty requirements as set out in the Engineers works requirements

	(47) ROOF FINISHES					
	INFORMATION					
A	This element of the work has been measured from Architects Drawing Nos		Note			
B	The Architects and Engineers drawings and specifications are all complementry to each other and should be read in conjuction with one another.		Note			
C	For detailed description to workmanship and materials see specification		Note			
D	The tenderers should examine the Architects and Engineers drawings and specifications and satisfy themselves as to the nature and extent of the works outlined below and should include for all costs in connection with same		Note			
E	Roof finishes shall be carried out by specialist firms. The manufacturer's of the roofing systems are to provide to the Client a written guarantee on their materials and workmanship incorporated in the works per the Architects Specification		Note			
F	Contractor's to include for all necessary air seals, mastic etc within their rates.		Note			

To Collection €

	Description	Qty	Unit	Rate	€	c
	Ground Floor Extension					
	Built-up reinforced bitumen membrane warm deck roof covering					
	Waterproof covering; Underlayer: Bauder G4E, OR equivalent, 4 mm thick, 200g/m2 glass-fibre reinforced, elastomeric torch-applied bitumen underlayer. Attachment: As clauses 710, 740. Top layer/ capsheet: Bauder K5K or equivalent 5 mm thick, 250g/m2 polyester reinforced, elastomeric bitumen torch applied capping sheet. Colour: Charcoal grey finish. Attachment: As clauses 710, 750. Flashings and detail work: Additional layer of SBS-modified bitumen membrane, mineral-surfaced. Fire Classification: Roof buildup is required to achieve BroofT4 - provide test certificates to match specific buildup. Include for all necessary Surface protection. Include also for all necessary accessories: Angle fillets, as clause 335, Perimeter trims, as clause 345, Pipe collars, as clause 480. Etc. Include for Warm deck roof insulation PIR. Type: Polyisocyanurate (PIR). Unilin Thin-R FR/BGM or Equivalent. Reaction to fire: Overall roof build up to achieve BROOF(t4), in accordance with BS EN 13501-5. Thermal conductivity (minimum): 0.024 W/(m-K). Overall U-Value of Roof buildup: 0.16W/m2K. Thickness: 140mm. Compressive strength (minimum): 150kPa. Other characteristics: As insulation manufacturer's recommendations for the traffic loading. Edges: Tongued-and-grooved. Facing. Working surface: polypropylene fleece finished bitumen/glass fibre. Underside: mineral glass facing Allow for to achieve falls as per architectural drawings. All in accordance with Architects Drawings and Specification Section J41/110 & 430					
	Laid to falls and cross falls on Plywood deck (elsewhere measured)					
A	> 300mm wide	93	m2			
B	Vertical upstands to parapet 30 mm thick, highly efficient rigid urethane insulation or equivalent. In compliance with Part L of the current Building Regulations, the insulation to wall abutments should be 300 mm in height from the deck surface to the top of the upstand, with the vertical insulation being installed before the flat, so as to retain the insulation at the base. Include for support brackets etc. complete, all as per Architect;s Drawing 331	14	m			
C	Ditto to Face of existing Masonary Wall	23	m			
D	Form Gutter 325mm wide	14	m			
E	Form watertight Rainwater outlets through parapet	2	no.			

To Collection €

	Description	Qty	Unit	Rate	€	c
	Air and Vapour control layer to Architect's spec. J41/395					
A	> 300mm wide	93	m2			
B	Ditto wrapped over parapet structure	7	m2			
C	Connection to face of existing face of masonary wall, include for all necessary seals, tape etc.	23	m			
	Lead					
	Lead Cover Flashing thickness:. End to end joints: Laps of not less than 100 mm. Cover: Overlap to upstand of not less than 75 mm. fixing into external face of existing masonary walls, include for all necessary sealant, saw cutting etc complete, All per Architect's Detail 02 331 and Specification					
D	150 - 300mm girth; horizontal	23	m			
	Pressed Metal					
	Coping units Aluminium.to BS EN 515, BS EN 573-3, BS EN 485-1 and BS EN 485-2.. Finish: Annodized to match finish of approved window systems. Material thickness (minimum): 3 mm. Fixings: SS self drilling screws, rivets for support frame. Clip system with no visible fixings to be used on coping. Brackets: "Clip-fix" folded aluminium brackets. Jointing: Expanding seal tape. Accessories: Factory fabricated stop-ends. Internal and external corners. Pnclude for Substrate: Calcium Silicate Fibre Reinforced Board, Manufacturer: Promat or equivalent, Product reference: Supalux/ Promatect-250 or equivalent. Thickness: 18mm. Material: Calcium silicate - exterior grade, inert and suitable for use in external walls/roofs Include for DPC, and Plywood grounds, cavity barrier, Fischer Concrete Screws Stainless Steel FBS 11 8X80 @ 500c/c, etc complete all as per Architect's Drawings 331 and Specification F30/780					
E	600 - 750mm girth; horizontal, 7 times cranked.	14	m			
F	Corners to ditto	2	no.			
G	Ends to ditto	2	no.			
	Drainage					
	Flush Joint 110mm diameter Cast Iron downpipe to match existing including all required fittings, bends, branches and accessories; fixed to hardwood tiber clad walls; all as per Architects drawings and Specification					
H	Downpipe 110mm Diameter	6	m

A	Extra; shoes	2	nr			
B	Extra; Hopper	2	nr			
	Roof Level Extension					
	Built-up reinforced bitumen membrane warm deck roof covering					
	Waterproof covering; Underlayer: Bauder G4E, OR equivalent, 4 mm thick, 200g/m2 glass-fibre reinforced, elastomeric torch-applied bitumen underlayer. Attachment: As clauses 710, 740. Top layer/ capsheet: Bauder K5K or equivalent 5 mm thick, 250g/m2 polyester reinforced, elastomeric bitumen torch applied capping sheet. Colour: Charcoal grey finish. Attachment: As clauses 710, 750. Flashings and detail work: Additional layer of SBS-modified bitumen membrane, mineral-surfaced. Fire Classification: Roof buildup is required to achieve BroofT4 - provide test certificates to match specific buildup. Include for all necessary Surface protection. Include also for all necessary accessories: Angle fillets, as clause 335, Perimeter trims, as clause 345, Pipe collars, as clause 480. Etc. Include for Warm deck roof insulation PIR. Type: Polyisocyanurate (PIR). Unilin Thin-R FR/BGM or Equivalent. Reaction to fire: Overall roof build up to achieve BROOF(t4), in accordance with BS EN 13501-5. Thermal conductivity (minimum): 0.024 W/(m-K). Overall U-Value of Roof buildup: 0.16W/m2K. Thickness: 140mm. Compressive strength (minimum): 150kPa. Other characteristics: As insulation manufacturer's recommendations for the traffic loading. Edges: Tongued-and-grooved. Facing. Working surface: polypropylene fleece finished bitumen/glass fibre. Underside: mineral glass facing Allow for to achieve falls as per architectural drawings. All in accordance with Architects Drawings and Specification Section J41/110 & 430					
	Laid to falls and cross falls on Plywood deck (elsewhere measured)					
C	> 300mm wide	148	m2			
D	> 300mm wide Vertical to Face of Upstands to AOVs / Lift Shaft Wall	23	m2			
E	Vertical upstands to parapet 30 mm thick, highly efficient rigid urethane insulation or equivalent. In compliance with Part L of the current Building Regulations, the insulation to wall abutments should be 300 mm in height from the deck surface to the top of the upstand, with the vertical insulation being installed before the flat, so as to retain the insulation at the base. Include for support brackets etc. complete, all as per Architect;s Drawing 332	58	m			

	Description	Qty	Unit	Rate	€	c
A	Ditto to face of Blockwork Upstand to lift shaft	7	m			
B	Form Gutter 350mm wide	44	m			
C	Form watertight Rainwater outlets through parapet. Include for all necessary flashings , flange, grounds, expanding foam, sealing, bends with roding eye, etc complete all per Architect's Drawings	2	no.			
D	Extra Over for tapered insulation to concrete roof deck of lift shaft	5	m2			
	Air and Vapour control layer to Architect's spec. J41/395					
E	> 300mm wide	148	m2			
F	> 300mm wide Vertical to Face of Upstands to AOVs / Lift Shaft Wall	23	m2			
G	Ditto wrapped over parapet structure	32	m2			
	Pressed Metal					
	Coping units Aluminium.to BS EN 515, BS EN 573-3, BS EN 485-1 and BS EN 485-2.. Finish: Annodized to match finish of approved window systems. Material thickness (minimum): 3 mm. Fixings: SS self drilling screws, rivets for support frame. Clip system with no visible fixings to be used on coping. Brackets: "Clip-fix" folded aluminium brackets. Jointing: Expanding seal tape. Accessories: Factory fabricated stop-ends. Internal and external corners. Include for Substrate: Calcium Silicate Fibre Reinforced Board, Manufacturer: Promat or equivalent, Product reference: Supalux/ Promatect-250 or equivalent. Thickness: 18mm. Material: Calcium silicate - exterior grade, inert and suitable for use in external walls/roofs Include for DPC, and Plywood grounds, cavity barrier, Fischer Concrete Screws Stainless Steel FBS 11 8X80 @ 500c/c, etc complete all as per Architect's Drawings 332 and Specification F30/780

	Description	Qty	Unit	Rate	€	c
A	Proprietary rainwater outlets Flat roof overflow. Bitumen Parapet Tell Tale Overflow. Manufacturer: Bauder OR Equivalent. Product reference: Compatible with roof membrane as specified in Section J41. Roof construction: Warm roof above concrete deck1. Roof insulation thickness: Refer to architectural drawings. Installation: Co-ordination for connected pipework required prior to casting of slabs. Note that fire integrity of slab is to be maintained and appropriate firestopping is to be installedwhere required.. Spigot:. Width: 50mm diameter. Length: 650mm nominal - to acheice 150mm clearance from outer face of existing rendered masonary wall. Flange: Material: Compatible with roof membrane as specified in Section J41. Size: minimum 330 x 330mm. Outlet: Type and direction to suit pipework with suitable adaptors and connections. All per Architect's Specification R10/365E	3	no.			
	Air and Vapour control layer to Architect's spec. J41/395					
B	> 300mm wide	100	m2			
	Intensive Green Roofs					
	Intensive green roof to flat roof. Bauder or Equivalent, Standard/ Code of Practice: GRO Code of Practice for Green Roofs. Roof type: Warm. Inlude for Substrate: As Clause J41/110. Slope: 1:60 on Bitumen sheet covering (elsewhere measured). Include for Protection Layer: Bauder FSM600 or Equivalent - 4mm protection fleece. Installation as clause 750C. Seperation Layer: BauderGREEN PE 02 separation layer or Equivalent. Slip Layer: BauderGREEN PE 02 slip layer or Equivalent. Moisture control layers: Drainage layer: BauderGREEN DSE 60 drainage board or Equivalent. Filter membrane: BauderGREEN FV 125 filter fleece. Growing medium: BauderGREEN SUB-IM UK intensive substrate. Nutrient levels within the soil shall from representative samples as per FLL Guidelines and BS 3882:2015 to be as follows and tailored for use on roof gardens featuring wildflower blankets. Depth: minimum as per manufacturer's guidelines. Vegetation: Pre-cultivated Irish Native species wildflower blanket. Complete all per Architect's drawings and Specification Q37/110					
C	> 300mm	42	m2			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Extra Over for					
A	Irrigation: BauderGREEN SUB-MD UK mineral drain aggregate. Accessories: As required to complete the system to manufacturers guildines including but limited to the following: -Chamber height adapter, -inspection chamber, -retention angles, -Project specific drip line irrigation system		Item			
B	Barrier at boundary with Paved Terrace	22	m			
	Terrace					
	Supply and fit Concrete Paving tiles to BS 7533-4:2006 Suitable for use on support pedestals as per clasue 467. Colour/ finish: natural grey finish. Size: 400x400mm, Thickness:: 60mm. Width of joints: 5mm. Include for Support system for precast concrete paving slabs. Incremental height adjustable steel pedestal, non-combustible. Standard:: BS 8579. Height adjustable range: 50-150mm. Pedestal diameter: : 205mm. Ultimate compressive strength:: 25kN. Fire perfomance:: Euroclass A1. Accessories: Slope corrector at base for gradients up to 1in80. Rubber acoustic shims. All per Architect's Drawings and SpecificationJ41/467 & 470					
C	> 300mm wide	47	m2			
D	Ditto Within Bell Tower	3	m3			
	Pebble Boundary					
	Supply and fit Pebble Stone boundary detail. Rounded river washed pebbles. Size: 5-30mm. Depth:: minimum 50mm. Colour: white/silver grey. All per Architect's Drawing 334 and SpecificationJ41/460					
E	> 500mm wide x 70mm deep	26	m			
F	Barrier at boundary with Green Roof	26	m

	EL (59) MECHANICAL INSTALLATION					
	General Information					
	The Contractor is advised that this Element and the Works Requirements are all complementary to each other and should be read in conjunction with one another		Note			
	This element of the work has been measured from Services Engineers Mechanical Specification and Drawings as per the Services Engineers Document Issue and Register Sheet for Mechanical Installation		Note			
	It will be deemed that the Contractor has inspected the works requirements, site and consulted all available information before submitting his tender.		Note			
	ALTERNATIVE RULES FOR THE MEASUREMENT OF MECHANICAL INSTALLATION					
	Deviation from ARM 4					
A	The Mechanical Installation has been measured in accordance with the Agreed Rules of Measurement ARM 4 - Agreed Alternative Rules for the Measurement of Services Installations. The Mechanical Installation is to be priced in accordance with said Measure, Detailed Design, Performance Specification and Drawings prepared by the Services Engineer and included in the Works Requirements.		Item			
	DRAINAGE INSTALLATION					
	Distribution system					
	Pipework; all as per Services Engineers Mechanical Specification and Services Engineers Drawings M1, M2, M3, M4 & M5					
B	Waste pipework; polyethylene soil, waste and overflow pipework above ground; including bottle traps, access points, connectors, safety discharges; sizes as per drawings		Item			
C	32mm diameter		Item

EL (59) MECHANICAL INSTALLATION **Carried to Summary**					

	Description	Qty	Unit	Rate	€	c
	(69) ELECTRICAL INSTALLATION					
	ELECTRICAL INSTALLATION					
	General Information					
	The Contractor is advised that this Element and the Works Requirements are all complementary to each other and should be read in conjunction with one another		Note			
	This element of the work has been measured from Services Engineers Electrical Specification and Drawings as per the Services Engineers Document Issue and Register Sheet for Electrical Installation		Note			
	It will be deemed that the Contractor has inspected the works requirements, site and consulted all available information before submitting his tender.		Note			
	ALTERNATIVE RULES FOR THE MEASUREMENT OF ELECTRICAL INSTALLATION					
	Deviation from ARM 4					
A	The Electrical Installation has been measured in accordance with the Agreed Rules of Measurement ARM 4 - Agreed Alternative Rules for the Measurement of Services Installations. The Electrical Installation is to be priced in accordance with said Measure, Detailed Design, Performance Specification and Drawings prepared by the Services Engineer and included in the Works Requirements.	1	Item			
	GENERAL SERVICES, SMALL POWER & COMMUNICATIONS SYSTEM INSTALLATIONS					
	System					
B	General services, small power & communications services systems to West Block; all as per Services Engineers Electrical Specification and Services Engineers Drawings E1, E2, E3, E4, E5 & E24		Item

(69) ELECTRICAL INSTALLATION **Carried to Summary**					

	Description	Qty	Unit	Rate	€	c
	(66) TRANSPORT INSTALLATION					
	General Information					
	The Contractor is advised that this Element and the Works Requirements are all complementary to each other and should be read in conjunction with one another		Note			
	This element of the work has been measured from Service Engineers drawings together with services engineers Electrical Services Engineer's General Specification, Site Specific Specification, Equipment Schedules, Equipment Data Sheets, Engineers's Scope of Works Documents & specifically the Lift Specification		Note			
	It will be deemed that the Contractor has inspected the works requirements, site and consulted all available information before submitting his tender.		Note			
	ALTERNATIVE RULES FOR THE MEASUREMENT OF LIFT INSTALLATION					
	Deviation from ARM 4					
	The Electrical Installation has been measured in accordance with the Agreed Rules of Measurement 4, Supplement 2 - Agreed Alternative Rules for the Measurement of Services Installations. The Lift Installation is to be priced in accordance with said Measure, Detailed Design, Performance Specification and Drawings prepared by the Services Engineer and included in the Works Requirements.	1	Note			
	LIFT INSTALLATIONS					
	System					
A	Lift installations services system installation all as per Service Engineers drawings together with services engineers Electrical Services Engineer's General Specification, Site Specific Specification, Equipment Schedules, Equipment Data Sheets, Engineers's Scope of Works Documents & specifically the Lift Specification		Item			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Equipment TYPE OF LIFT: Electric Drive P-Passenger elevator; COMPLIANCE CODE: The Lift Installation shall comply with EN81-20:2014 Safety rules for the construction and installation of lifts - Lifts for the transport of persons and goods, EN81-73:2016 Behaviour of lifts in the event of fire, EN81-70:2018 Accessibility to Lifts for persons including persons with disability; TYPE OF DRIVE Gearless; NUMBER OF FLOORS 4 No.: LIFT TRAVEL DISTANCE 4 No. Floors @ 3.4m per floor; RATED SPEED 1.0m/s RATED CAPACITY: 630kg/8 No. persons; SHAFT DIMENSIONS 1.65m wide x 1.80m deep; SHAFT CONSTRUCTION, Concrete; PIT HEIGHT 1.10m; HEADROOM 3.40m; ENTRANCES: 4 No. front entrances; FIRE RESISTANCE 2 hour rating (FD120); MACHINERY LOCATION; Top of lift shaft; CONTROL SYSTEM, Full Collective. Simplex; MACHINE OUTPUT 4kW; ELECTRICAL SUPPLY: Nominal supply current with shaft lighting 11A; Starting supply curent 13A; Main Fuses 10A; Power Supply, machinery 3 x 400/50 V/hZ; Power supply 230/50V/Hz; GUIDES AND ATTACHMENTS; Expander bolts fixing Car with sliding shoes; ROPES; Steel hoisting ropes; CAR DIMENSIONS 1.10m wide x 1.40m deep x 2.10m high: DOOR SIZE 0.90m wide x 2.00m high LIFT CAR FIINISHES: Floor Finishes, Ceiling Finishes Wall Finishes, Handrails and Operating Panel and Indicators as per Section 3 of the Lift Specification: LIFT CAR FITMENTS: Lift car fitments all as per Section 3 of the Lift Specification; LIFT CAR/EMERGENCY LIGHTING: all as per Section 3 of the Lift Specification; COMMUNICATION: al as per Section 3 of the Lift Specification

	EL (19) SUBSTRUCTURE					
	INFORMATION					
A	This element of the work has been measured from Structural Engineers Drawings, Engineers Specification together with Architects Drawings & Architects Specification		Note			
B	The Architects and Engineer's drawings and Specifications are all complementry to each other and should be read in conjunction with one another		Note			
C	The Contractor is advised that the Works Requirements and Pricing Document are all complementary to each other and should be read in conjunction with one another		Note			
D	For detailed description of workmanship and materials refer to Specifications		Note			
E	The tenderers should examine the Architects and Engineers drawings and specifications and satisfy themselves as to the nature and extent of the works outlined below and should include for all costs in connection with same		Note			
F	For details of ground conditions refer to Site Investigation Report included with Tender Documentation.		Note			
G	Allow for probing the sub-strata prior to excavation to ascertain the exact nature of the sub-strata		Item			
H	The Contractor is advised that all works within the Exclusion Zones around Protect Trees on site must be done by hand. No mechanical digging etc. is permitted within these zones. Contractor is to include here for any additional costs carring out any of the works listed below within the Exclusion Zones. Where applicable Exclusions Zones are indicated on Architect's Drawings		Item			
J	All the works are to be carried out in such a manner as to ensure the safety of the works adjoining properties, the public and contractors rates shall include for all necessary precautions.		Item			
				To Collection €

EL (19) SUBSTRUCTURE **Carried to Summary**					

	Description	Qty	Unit	Rate	€	c
	EL (22) INTERNAL WALLS					
	INFORMATION					
A	This element of the work has been measured from Structural Engineers Drawings, Engineers Specification together with Architects Drawings & Architects Specification		Note			
B	The Architects and Engineer's drawings and Specifications are all complementry to each other and should be read in conjunction with one another		Note			
C	The Contractor is advised that the Works Requirements and Pricing Document are all complementary to each other and should be read in conjunction with one another		Note			
D	For detailed description of workmanship and materials refer to Specifications		Note			
E	The tenderers should examine the Architects and Engineers drawings and specifications and satisfy themselves as to the nature and extent of the works outlined below and should include for all costs in connection with same		Note			
	IN-SITU CONCRETE					
	Concrete Cube Tests					
	Form and test concrete cubes in accordance with the Works Requirements and Structural Engineers specification					
F	generally	1	Item			
	Reinforced poured concrete; Grade C30/37, Exposure Class XC2/XC4 (External)					
	Walls					
G	>150mm thick: reinforced	95	m3			
	Projecting nib					
H	Cross sectional area < 0.10m2	1	m3			
J	EO for 50mm diameter weep holes at 1m c/c to base of in-situ walls	27	no			

To Collection €

	Description	Qty	Unit	Rate	€	c
	REINFORCEMENT					
	Reinforcement bars, to engineer's specification					
	Bar:Straight or bent					
A	< 12mm diameter / 12 - 25mm diameter / > 25mm diameter / Links< or = 12mm diameter	6.92	tonne			
	FORMWORK					
	Wrot formwork as described to Engineer's specification to : -					
	Projecting nib to side of retaining walls					
B	200mm wide x 250mm high	15	m			
	Kickers to:-					
C	Walls	124	m			
	Walls					
D	Vertical > 4.00m high	758	m2			
	Edges of openings					
	Walls					
E	Area of opening not exceeding 1.00m2	8	no			
F	Area of opening 1.00 - 5.00m2	12	no			
G	Area of opening 10.00 - 15.00m2	1	no			
	Sundries					
H	Allow for casting in 100mm diameter sleeves through 200 thick concrete walls for incoming services	8	no			
J	Allow for casting in 150mm diameter sleeves through 200mm thick concrete walls for incoming services	8	no			
	Waterbars					
	Adcor 550MI or equivalent per Engineers Specification					
K	Horizontal	124	m			
L	Vertical	99	m			
M	Angles	32	no			

To Collection €

	Description	Qty	Unit	Rate	€	c
	Concrete Work					
	Precast Concrete					
	Precast Prestressed concrete; proprietary lintels; to be used in conjunction with 'Notes on Preparation and Load span tables'; standard stock pattern units; B.S. 1239; standard bar reinforcement as required; building in as work proceeds; bedding in gauged mortar (1:1:6); used strictly in accordance with manufacturers instructions, and per Engineer's Details					
	Lintels					
A	100 x 65mm	5	m			
B	215 x 65mm	39	m			
	Brickwork and Blockwork					
	Brickwork / Blockwork					
	Concrete blocks; to be category 1 group 1 and to EN 772-1; compressive strength 13N/Sqmm; 440 x 215 x 100mm nominal size; in mortar (1:1:6) min. strength M4; laid stretcher bond; all as per Architects and Engineers Specification					
	Walls					
C	100mm thick	23	m2			
D	215mm thick	505	m2			
	Extra over for special bricks/blocks					
E	Reinforced concrete filled 215mm x 215mm U-block; horizontal; filled with and including Grade C30/10 concrete with and including (2no) T16 reinforcement bar, minimum 600mm laps; with and including single course of 215mm solid blockwork layed on top; as Engineers Drawings (2 rows of Band beams measured)	198	m			

	Description	Qty	Unit	Rate	€	c
	TYPE BLK.201 THERMAL BLOCKWORK; Autoclaved aerated concrete blocks to BS EN 771-4; compressive strength 13N/mm2 category I; Thermal conductivity (max) 0.19W/mK; 440 x 100 x 215mm nominal size; Fire rating to BS EN 13501-1; in mortar 1:1:5 or 6 mixture of Cem 1; strenght class M4 to BS EN 998-2; laid in half lap stretcher bond with neat flush pointing as the work proceeds; all as per Architects Specification and Engineers Specification					
	215mm thick					
A	>300mm wide	20	m2			
B	Two courses of 215mm thermal blocks built into standard blockwork external walls as shown on Architect's Drawing 21202	20	m			
	Labours;					
C	On Blockwork Generally	1	Item			
	Bonding to Other Work					
D	Ancon PPB Debonded wall ties, having one end shot fixed to existing block wall, and other end built into 215mm blockwork wall at 450mm vertical centres, as the works proceed.	6	m			
E	215mm blockwork tied to reinforced concrete columns using 'Dovetail Slots' or similar at 225 vertical c/c and 450 horizontal as the works proceed.	114	m			
	Bedjoint Reinforcement					
F	Provide 3 courses of GBF 35 W60 SC brickforce (or equivalent) reinforcing to horizontal bed joints directly above ope. Extend minimum 750 beyond ope size, all per Engineer's Specification	198	m			
	Fire Stopping System;					
G	Allow for Design, supply and installation of Fire Stopping System all as before in;		Item			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Approved proprietary linear firestop; include for sealing both sides with approved proprietary ablative coating in fire stopping at head of walls and all as per Architects Drawings and Specification					
	Provide and install complete approved compressible moisture resistant stone wool filler material between top of blockwork and underside of concrete slab having 60 minute fire rating to EN; 1987; include for pointing both sides in matching intumescent mastic per Architects Specification in;					
A	215mm wide	198	m			
	Secondary Steel To Internal Walls					
	Structural Steelwork					
B	Rates are to include for all labours in connection with the following work including all fittings		Note			
C	All elements of the structure designed by the contractor shall be submitted to the Structural Engineer for comment		Note			
D	The Contractor shall provide temporary bracing and shoring against lateral forces and all construction loads throughout the work. Design of temporary bracing and shoring to be submitted to the Structural Engineer for approval (refer to Engineers Drawings)		Note			
E	Rates for Structural Steel are to include for all site welding. The Contractor shall note this measurement preamble amends the Agreed Rules of Measurement Ref 85/4/5 & 6		Note			
F	Rates for Structural Steel are to include for all site bolts. The Contractor shall note this measurement preamble amends the Agreed Rules of Measurement Ref page 85/2/3		Note			
G	Provide for complying with the specification requirements for tests of materials; workmanship, tolerances and finished structures		Note			
	Builders Work Requirements					
	The Contractor must obtain in time all necessary information relating to the structural steel erection builders work to enable the works to be carried out without interruption. Any additional costs incurred by his failure to obtain this information will be at his own expense					
H	Setting out Structural Steel with Specialist Contractor	1	Item			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Structural Steelwork					
	Notes:					
A	1. The Contractor is required to design, provide and fix all necessary fittings; caps; bases; hunches; gussets; end plates; splice plates; cleats; brackets; angles; stiffener plates; distances pieces; bolts and associated fittings and connections which may be necessary to complete this section of the works. The Contractor is required to liaise and co-ordinate with other trades to provide and fix all such fixings as may be necessary for this installation		Note			
B	2. The Contractor will be required to carry out 100% testing on all site welding as detailed in the Structural Engineer's Civil & Structural Specification.		Note			
C	All steel to be grade s355 uno	1	Item			
D	All fabricated structural steelwork to be ce marked in conformance with new building regulations and construction product regulations	1	Item			
E	Structural steelwork to be minimum EXC2 execution class to BS EN ISO 12944-2	1	Item			
F	Structural steelwork to comply with national structural steelwork specification (NSSS) for building construction, 5th edition CE marking version	1	Item			
G	Steelwork contractor to provide the following: (i) factory production certificate. (ii) welding certificate. (iii). declaration of performance.	1	Item			
H	On site welding requires 100% visual inspection as well as a supplementary programme of non-destructive testing in accordance with the "national structural steelwork specification - 5th edition - Annex B - welds - extent of routine supplementary NDT.	1	Item			
J	All temporary works required to support or erect the structural steel are to be provided by main contractor / steel subcontractor	1	Item			
K	In some circumstances, elements of the steel structure may require to be errected & subsequently temporary removal to allow the erection of precast slabs or other internal works & such works are to be initiated in advance by the steel sub contractor.	1	Item			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	All structural steel load bearing elements are to be fire rated with intumescent paint to fire safety consultants requirements. Note also where non load-bearing steel elements are attached to load-bearing elements the fire rating is to extend 500mm onto the non load-bearing element.	1	Item			
	The following steelwork to be Grade S355; in accordance with BS EN 10025-2 and the Structural Engineers Civil and Structural Specification; fabrication, surface preparation, priming at works and site erection and treatment to comply fully with all aspects of the structural steelwork specification; all as per Engineer's Performance Specification					
	Fabricated steelwork; welded fabrication bolted and welded site connections					
	The following in prefabricated steel framework including bolts, nuts and washers for steel connections shot blasted, shop primed and painted as per Engineers Specification and drawings including fittings; caps; bases; hunches; gussets; end plates; splice plates; cleats; brackets; angles; stiffener plates; distances pieces and associated fittings					
	Structural Steel all hoisted and set in to position [Engineers drawing DR-S-02120 & 02121]					
	Lintel (L2)					
B	152 x 152 x 23 UC	0.53	tonne			
	Fittings					
C	Structural Steel Fittings	0.06	tonne			
	Bearing Pads built into blockwork all per Engineer's Drawings & Specification					
D	440x215mm deep (min.) mass concrete (C30/37 to I.S. EN 206-1 Table 7 and max aggregate size of 10mm) bearing pad	20	No			
E	2No. M16 grade 8.8 cast-in holding down bolts fixing steel to bearing pads (elsewhere measured)	20	No			
	Testing , Surveys, Samples & Warranties					
	Include for all testing, surveys, samples & warranty requirements as set out in the Architects Works Requirements					
F	Testing	1	Item			
G	Surveys	1	Item			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	Samples	1	Item			
B	Warranties	1	Item			
	Include for all testing, surveys, samples & warranty requirements as set out in the Engineers Works Requirements					
C	Testing	1	Item

	CONCRETE WORK					
	IN - SITU CONCRETE					
	Concrete Cube Tests					
	Form and test concrete cubes in accordance with the Works Requirements and Structural Engineers specification					
F	generally	1	Item			
	In-situ concrete; designed concrete mix to IS EN 206-1; compressive strength class C30/37; maximum aggregate size 20mm; Min cement content 320kg/m3; exposure classes XC3; reinforced and vibrated; all in accordance with the Works Requirements and the Structural Engineers particular specification for concrete					
	Slabs					
	> 150mm thick					
G	reinforced	224	m3			
	Upstands and the like					
H	Cross sectional area > 0.10m2	1	m3			

	Description	Qty	Unit	Rate	€	c
	CONCRETE WORK: Sundries					
	Designed joints					
	Expansion joints; formed joints including cast-in proprietary shear connectors; joint width 35mm c/w filler material; all in accordance with the Works Requirements and Structural Engineers particular specification for concrete clause 2.5 & 3.1					
	Slabs					
A	width 150 - 300mm	146	m			
	Surface finishes					
	Powerfloating					
B	horizontal	839	m2			
	CONCRETE WORK: Reinforcement					
	Bar					
	High yield steel bar reinforcement; hot rolled deformed high yield steel bars to BS 4449; Class B high yield (fy = 500N/mm2) capacity; fixing with tying wire and supporting on metal chairs in strict accordance with the manufacturers instructions but at the contractors discretion; all in accordance with the Works Requirements					
	Bar:Straight or bent					
C	< 12mm diameter / 12 - 25mm diameter / > 25mm diameter / Links< or = 12mm diameter	20.74	tonne

	CONCRETE WORK: Formwork - [Type A Finish]					
	Plain Formwork - Type A Finish; all in accordance with the Works Requirements and Structural Engineers particular specification for concrete					
	Edges of suspended slabs and landings					
	Height 250 - 500mm					
K	generally	273	m			
	Steps in soffits					
	Height < or = 250mm					
L	generally	25	m			
	Sides of upstands and steps in top surfaces					
M	height <250	15	m			
	Soffits of suspended slabs					
	Soffit height < or = 4.00m					
N	generally	839	m2			
	Edges of openings					
	Slabs					
P	area of opening < or = 1.00m2	10	nr			

	Description	Qty	Unit	Rate	€	c
A	area of opening 1.00 - 5.00m2	10	nr			
	Beams					
	Attached; rectangular					
B	generally	103	m2			
	Form recess in slab					
C	1200 x 1300mm on plan; <250mm high	16	no			
D	2500 x 2500mm on plan; <250mm high	2	no			
	FLOWFORGE GRATINGS AND FRAME					
	Structural steelwork; all steelwork to be Grade S355 unless noted otherwise and shall comply with the requirements of EN 10025:1993; all in strict accordance with the Engineers specification and drawings					
	Protective coatings; surface treatment off site; before fabrication shot blast cleaning to SA2.5 Swedish Standard SIS. 05.5900; apply one coat of "HGW" or equal approved two pack epoxy zinc rich primer A5214 to a DFT of 25 microns; apply one coat "HGW" or equal approved two pack epoxy high build zinc phosphate primer A5080 to a DFT of 75 microns; spot prime after erection as required					
	Composite Item; 5mm hot dipped galvanised flowforge grating (mesh size 38/125) set into steelwork frame comprising 152 x 89 x 16 UB steel beams; 100 x 50 x 8 RSA					
E	overall size 2300mm x 500mm ; all as per detail 1	10	nr			
F	overall size 500mm x 500mm ; all as per detail 2	10	nr			
	Proprietary Steel Grating Flooring (First Floor)					
	Beams					
	25 - 50 kg/m					
G	254 x 102 x 23 UB	0.33	tonne			
	Galvanised connection plate; 10mm thick fixed to concrete column with and including 4 nr. M12 Grade bolts					
H	300mm x 200mm	3	nr			
	Fittings					
J	Structural Steel Fittings	0.03	tonne			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Protective Coatings					
A	Hot dip galvanising to BS 729 after fabrication; coating with 2 ply epoxy as per Engineers Specification	0.36	tonne			
	Painting; Intumescent painting to achieve one hour fire rating to BS 476-21, structural steelwork in isolated members, include for all necessary steelwork preparation, and top sealer coat and all as per Architects Specification and Engineers Drawings					
B	> 300mm girth	12.7	m2			
	Composite Item; Proprietary steel grating flooring cut to suit grating to be max 41mm pitc, 100mm spacing, bar size 40x5 and designed to take loading of 5kN/m2 fixed on to steelwork frame					
C	overall size 3200mm x 1600mm ; all as per detail 1	1	nr			
D	overall size 2200mm x 1800mm ; all as per detail 1	1	nr			
	Padstones					
	Provide and install reinforced concrete padstones into existing concrete blockwork. Include for all necaessry concrete infill, reinforcement and formwork, all per Engineer's details. Size;					
E	660mm x 215mm x 215mm	4	No.			
	Testing , Surveys, Samples & Warranties					
	Include for all testing, surveys, samples & warranty requirements as set out in the Architects Works Requirements					
F	Testing	1	Item			
G	Surveys	1	Item

	Blockwork					
	Concrete blocks; to be category 1 group 1 and to EN 772-1; compressive strength 13.5 N/Sqmm; 440 x 215 x 100mm nominal size; in mortar (1:1:6) min. strength M4; laid stretcher bond; all as per Architects and Engineers Specification					
	Inner Leaf Of External Walls					
A	225mm thick	843	m2			
	Extra over for THERMAL BLOCKWORK; Autoclaved aerated concrete blocks to BS EN 771-4; compressive strength 7.5N/mm2 category I; Thermal conductivity (max) 0.19W/mK; 440 x 100 x 215mm nominal size; Fire rating to BS EN 13501-1; in mortar 1:1:5 or 6 mixture of Cem 1; strenght class M4 to BS EN 998-2; laid in half lap stretcher bond with neat flush pointing as the work proceeds; all as per Architects Specification and Engineers Specification					
	215mm thick					
B	<300mm wide	68	m2			
	Labour on Blockwork					
C	Generally		Item			
	Bonding to Other Work					
D	215mm blockwork tied to existing external masonary wall of existing building, Include for all necessary preparing existing wall to recieve new blockwork wall, and also for any necessary reinstatement after. All to the satisfaction of the Engineer and Architect.	13	m			
E	215mm blockwork tied to Reinforced Concrete Columns / Walls. Include for "Abbey Anchor" Dovetail Slots to be Cast Into Reinforced Concrete Columns @ 450mm Vertically To Restrain Inner Leaf. All per Engineer's drawing DR-S-4010.	560	m			

	Description	Qty	Unit	Rate	€	c
	BRICKWORK AND BLOCKWORK: Ancillaries to Brickwork / Blockwork					
	Forming cavities					
	Full fill cavity insulation to masonary / in-situ concrete cavity wall; 130mm wide cavity; WALL TIES: vertical twist type stainless steel wall ties complying with BS 1243 at 450mm centres vertically and 450mm centres horizontally; include for keeping cavity clear of mortar droppings; INSULATION: 120mm thick rigid phenolic foam insulation board with an outer facing of vapour open polypropylene fleece and a composite (perforated) foil on the inner face with a thermal conductivity of 0.018W/mk; all in accordance with the Works Requirements and in particular Structural Engineers particluar specification for blockwork and Architects specification clause F30/150A					
	Between new walls					
A	130mm wide cavity	666	m2			
	Damp proof courses					
	Damp proof course to IS 57, Ruberiod Hy-Load Bituminous Polymer 1.10mm thick or equivalent; 200mm laps; sealed with and including poly-butyl rubber tape; all in accordance with the Works Requirements and in particular Architects specification clause F30/320A					
	Width < or = 225mm					
B	vertical	663	m			
	Width > 225mm					
C	horizontal [under cills and dressed around ends]	65	m2			
	Damp proof courses - [Preformed cavity trays]					
	Composite item; preformed aluminium cavity trays fixed to structure with and including thermal isolating pad and flashed at top with EPDM bonded to structure; all in accordance with the Works Requirements and in particular Architects drawing nr. 15DOM-503 & 504 and specification clause F30/370 & 380A					
	Cavity trays					
D	girth 450 - 600mm girth; stepped	799	m			

	Description	Qty	Unit	Rate	€	c
	Designed joints					
	Movement joints; expansion joints in blockwork 12mm wide; cleaning and priming both faces; preformed stainless steel bead jointed by original vertical jamb DPC; filling with polythene filler; extra wall ties; all in accordance with the Works Requirements					
	Designed joints					
A	vertical; 102.5mm thick brickwork	45	m			
	Sundries					
	Ventilation ducts in external walls; non-adjustable louvre grille, blades at 12.5mm centres, in square grade 316 stainless steel frame; all in accordance with the Works Requirements and in particular Architects drawing nr. 15DOM-587 and specification clause F30/171					
	Ventilation openings					
B	generally	67	nr			
	Peep weep hole with circular outlet, at maximum 1000mm centres and not less than 2 over each opening; all in accordance with the Works Requirements and in particular Architects specification clause F30/132					
	Weep holes					
C	generally	799	m			
	BRICKWORK AND BLOCKWORK: Ancillaries to Brickwork / Blockwork					
	Cavity Barriers					
	Mechanical cavity barriers; MANUFACTURER: Rockwool Ltd or equivalent Frie Pro SP Firestop EN (SP FireStop EN 60; STANDARD; to BS EN 1366-4:2021; TYPE; Rigid; ; FACING; Metal foil laminate; FIRE PERFORMANCE; TO E1 60 to BS EN 13502-2; RECYCLED CONTENT; 20-25%; REACTION TO FIRE; EuroclassA1 Non Combustible; THICKNESS; 75MM; WIDTH; 1200mm; LENGTH 1000mm; COLOUR ; Blackall in accordance with the Works Requirements and in particular Architects Specification Clause P10/432A					
	150mm thick cavity

	BRICKWORK AND BLOCKWORK: Ancillaries to Brickwork / Blockwork					
	Vapour Control Layer					
	Vapour control layer fixed to concrete structure behind cladding; MANUFACTURER: Tyvek Dupont or equivalent, Product Reference Airguard A2 FR; REACTION TO FIRE; to EN 13501-1 A2-s1, D0; WATER VAPOUR TRANSMISSION PROPERTIES; to EN 1931 - 4900u; WATER TIGHTNESS (2 kPA;); to EN1928; THICKNESS 1.5mm; all in accordance with the Works Requirements and in particular Architects specification clause P10/310A					
	> 300mm wide					
A	generally	666	m2			
	STRUCTURAL: Steelwork					
	PREFABRICATED STEEL LINTELS:					
	Ancon Nexus Steel lintel or similar with and including brick slip soffit with min. 225mm bearing. Bed on mortar used for adjacent work with bearing of not less than 150 mm unless specified otherwise. - To be installed in accordance with manufacturers recommendations. Refer to architectural drawings for U-value requirements.. All per Engineer's Drawings & Specification and Architect's Drawing and Spectfication					
	Lintels to suit 465mm wide cavity wall construction (connsisting of 100mm outer leaf, 150mm cavity and 215mm inner leaf). Include for brick slips fixed to underside of lintel, complete					
B	Type L2	104	m			
	Support system for outer leaf brickwork/blockwork					
	Grade stainless steel angle and bracket support system; stainless steel angle (dead load 14kN/m) fixed to cast in channel using "T-head" bolts; all fixing in strict accordance with the manufacturers written instructions. All per Engineer's Drawings & Specification and Architect's Drawing and Spectfication					
	Support system to outer leaf brickwork/blockwork					
C	150mm cavity width	408	m

Description	Qty	Unit	Rate	€	c
DOUBLE GLAZED WINDOWS/SCREENS **Composite windows** 1. Description: Highly insulated thermally broken aluminium sash and timber frame. Aluminium sash profiles will be fully ventilated and drained through concealed drainage channels and incorporate an aluminium glazing rebate. The sealed glass unit must be internally dry-glazed with EPDM gaskets and the glass rebate must be formed of aluminium. 2. Manufacturer: Novus windows OR Equivalent 2.1. Product Reference: Nation Ideal Combi OR Equivalent 3. Type: For use generally as: - Apartment balcony doors with fixed sidelights - Side hung Tilt / Turn windows Fixed windows Refer to architectural drawings for types and configurations of windows / doors. 4. Standard: Non-fire-rated and/ or non-smoke-rated windows to BS EN 14351-1 Fire-rated and/ or smoke-rated opening windows to BS EN 14351-1 and BS EN 16034 5. Materials 5.1. Exterior frame/ sash cladding: Aluminium/ Timber Outward & Inward Opening Sashes. The window sash will have a 54mm external sash profiles which are fully ventilated and drained through concealed drainage channels and incorporate an aluminium glazing rebate. 5.1.1. Finish: The external aluminium sash must be polyester powder-coated in compliance with BS 6496, BS 6497, GSB and DIN 50939, to a selected metallic RAL colour [TBC] to gloss level 30% or gloss level 77% and a primary coating thickness of between 60-120 um 5.2. Interior frame/ sash section: The system must have an internal structural frame of laminated softwood, sourced from a renewable and managed supply chain. Quality optimised finger jointed timber with 149mm (or 175mm) overall depth of frame. The frame is completed with PUR core with a lambda value of 0.074 W/mK and external PPC Aluminium profile 5.2.1. Timber standard:: To BS EN 942. Softwood as table NA1 Appearance class: J30 Moisture content on delivery: 12 - 19% 5.2.2. Assembly adhesive:: Thermosetting resin to BSEN 12765 class C4 5.2.3. Joinery workmanship:: As section Z10. 5.2.4. Preservative treatment:: Organic solvent as section Z12 and WPA Commodity Specification C5; service life 50 years 5.2.5. Finish: The internal timber frame to be preservative treated with fungicides and have a further two coat factory pre-finish with an environmentally friendly (solvent free) 100% Acryl emulsion/water-based surface treatment. The coating is to have a dry paint thickness of between 60-100 um and a colourless finish to gloss level 25 (silk matt). 5.2.6. Fixing:: Galvanised straps at 600mm centres, or as manufacturers recommendations 5.3. Spandrel panel: The facade panel is an insulated aluminium panel that is provided as part of the overall system and fitted within frame to match the windows. It must be fire rated to achieve 60 minutes fire resistance for load bearing capacity, insulation and integrity

	12. Ironmongery/ accessories: To include: PPC Aluminium Tray Cill Pressings Concealed Aluminium Click Vents Integrated Espagnolette Handles to operate a fully concealed multi-point locking mechanism with night vent position. Concealed Dual Function Restrictors to all openings above GFL Friction stays, sliding tracks, hinges and handles must be sourced from one single manufacturer and/or must have been developed and engineered specifically with the proposed window system in mind. Opening handles are to be single handles incorporating a multipoint locking mechanism fully concealed within the sash with only one handle permitted per window/ door. Alternative handle specification will be to provide 2 SAA (or equivalent) square catch handles per window. Enhanced ironmongery to be upgraded from general specification above due to increased security requirement: Refer to Section P21 505 and ironmongery schedule for further details. 13. Background ventilation:: Concealed aluminium click vents to provide equivalent area as required for compliance with TGD Part F 2019. A schedule of ventilation areas achieved by each window unit is to be provided to the Architect prior to placement of order. 14. Warranty & Design Life:: The window system will have an expected design life of at least 60 years and a schedule of maintenance will be provided. The complete window inclusive of framing, gaskets, ironmongery and glazing will be covered by a 10 year warranty from date of manufacture. 15. Verification: 15.1. Submittals: Manufacture: Window production facilities will operate an ISO 9001 quality control system. 15.2. Timing: Before placement of orders. Inclusive of all fixings, sealing, ironmongery, complete. All in accordance with Architects Specification L10/410

	Curtain Walling					
	Curtain Walling 1. Description: Aluminium curtain walling system with externally flush silicone jointing between adjacent toggle fixed glazing units and adjoining perimeter cladding. Curtain wall mullion profiles shall be internally reinforced where necessary and dead load supported and laterally restrained at floor levels 2. Location:: DVR - Ground floor windows to East Block - EBWG.06 and EBWG05 West Block - Type WE window (to stair block on all levels) 3. Supporting structure: Steel superstructure for vertical elements and head detail. 4. Curtain walling system 4.1. Type: Structurally glazed system Schueco FWS50 SG SI - or equivalent 5. Internal framing member 5.1. Material: Aluminium 5.2. Finish: Anodizing 5.2.1. Colour/ texture: Natural - Refer to Section Z33 6. External cover cap 6.1. Material: Aluminium 6.2. Finish: Anodizing 6.2.1. Colour/ texture: Natural - Refer to Section Z33 7. Glazing: 7.1. Performance requirements:: High performance solar control coated (typically high performance solar control coating to surface #4 or #6), argon filled, toggle fixed, insulating triple glazed vision units with PVB (acoustic if required) laminated 1(B)1 (in accordance with EN12600) safety glass to external and internal leaf's with black warm edge spacer bar technology (Swisspacer Ultimate or equivalent). Medium-iron content substrates to be used throughout. 7.2. Glazing calculations: Calculations to be based on 2-sided held glass 7.3. Average glazing u-value including frame factor: see clause 370 7.4. Glazing light transmittance (G-value): 0.40 maximum 7.5. Glazing Security performance (EN356): P4A 7.6. Other requirements: Silicone seal spacer required 8. Accessories: Any associated accessories required to complete the system design including, but not limited to: - Perimeter flashings - Glass manifestation. All in accordance with Architects Specification H11/110A					
C	Type WG - Size to suit structural ope 6340mm wide x 2260mm high; multiple fixed panel as per Architects Drawing 601	1	No			
D	Type WH - Size to suit structural ope 1360mm wide x 2810mm high; fixed panel as per Architects Drawing 601	1	No

	Proprietary windows - AOW					
	1. Description: Louvre windows with actuators to provide smoke extraction to commonal corridor areas 2. Standard: Natural smoke and heat exhaust ventilators in accordance with IS EN 12101 3. Manufacturer: Fieger OR Equivalent 3.1. Product reference: FLW-32 OR Equivalent 4. Ventilation requirements:: Minimum free area of 1.5m2, in accordance with Para 6.1.4 of the TGD B: 2024 5. Operation:: The vents will be automatically opened by the fire detection and alarm system, on activation of smoke detectors in the stairway enclosure/ on activation of the smoke control system as specified by Mechanical & Electrical Engineer, and will also be manually openable for fire brigade use. The manual override will be provided with clear signage as to its function and operation, for fire service use only. AOV's will comply with IS EN 12101-2. Where any part of the control mechanism is powered by electricity, a secondary supply will be provided. 6. Integration of control systems: Refer to Mechanical & Electrical Engineer specfications and drawings. 7. Finish as delivered: Finish to match system specified Section L10/410 8. Frame dimensions: 8.1. Visible frame width (vent): 40mm (horizontal and vertical) 8.2. Visible frame width (louvres): 21 mm 9. Performance:: in accordance with IS EN 12101-2 10. Thermal performance (U-value maximum): 1.1 W/m2K with triple glazing 11. Air permeability: Class 4 in accordance with EN 12207 12. Watertightness: Class 7A in accordance with EN 1220813. Glazing details: 28 mm double-glazed 14. Accessories: As required to complete the commissioning of the smoke control system including,but not limited to the following: Fireman's override switches Key switches MCC Panel Pressure sensors. Refer to Mechancial & Electrical Engineers drawings and specifications for more details. 15. Fixing: As per manufacturers recommendations. 16. Verification. Inclusive of all fixings, sealing, ironmongery, complete. All in accordance with Architects Specification L10/390					
A	Type WL - size to suit structural ope 1135mm wide x 2260mm high; 5Nr opening vents as per Architects Drawing 601 and 323	4	No			
B	Extra over for linking to fire alarm, control system, actuator, associated wiring and controls etc. (if not already included for in the Electrical Installations element of this Pricing Document)	4	No

	Metal Doorsets Plant room					
	1. Description: Highly insulated aluminium doorset for plant rooms. 2. Manufacturer: Submit proposals 2.1. Product reference: Submit porposals 3. Types: Refer to architectural drawings 3.1. East Block - Plant room: Outward swinging double doors 3.1.1. Fire resistance: EI60Sa in accordance with IS EN 13501-2 4. Performance 4.1. Fire performance 4.1.1. Fire resistance: EI60 4.1.2. Smoke leakage: Sa 4.1.3. Reaction to fire: To BS EN 13501-1, Class B-s3, d2 or better. 4.2. Acoustic performance: Rw (C;Ctr) = 33 (-2;-5) dB - 36 (0;-2) dB. 4.3. Thermal performance (U-value maximum): 1.6 W/m2K. 4.4. Security (Intruder resistance): RC2/ WK2 to European standard EN(V)1627_EN(V)1630 4.5. Watertightness: Up to 600 Pa (class 3) 4.6. Air permeability: Up to 300 Pa (class 7A) 4.7. Resistance to wind load: Up to 800 Pa (class C2) 5. Door leaf 5.1. Material: Anodized Aluminium - to match finish as clase L10/ 410 5.2. Type:: Flush panel 6. Frame 6.1. Material: Anodized Aluminium - to match finish as clase L10/410 6.2. Threshold: Flat aluminium with brush seal 7. Architrave 7.1. Material: Plasterboard + skim to internal reveal. 8. Ironmongery: 8.1. Handles: Shield handles, natural anodized 8.2. Access control: Mortice lock with key and thumbturn internally. 9. Perimeter seals: Fire and smoke seal + EPDM weatherseal. 10. Other requirements: Flush threshold drain with lapping DPC/ EPDM on exterior side connected to surface water drainage network 11. Fixing: As per manufacturer's guidelines 12. Warranty: Ten year 13. Verification 13.1. Submittals: Product sample as specified, including integral accessories, with certification demonstrating compliance with the performance requirements of the system. Manufacturer's certification and warranties for a period of 15 years. Manufacturer's literature and/ or certification. Declaration of Performance or a third-party certification in respect of fire performance by a EU-accredited third-party testing organizatio Evidence of CE marking 13.2. Timing: Before placement of orders. Inclusive of all fixings, sealing, ironmongery, complete. All in accordance with Architects Specification L20A/485					
A	Type DC - size to suit structural ope 1810mm wide x 2285mm high; double doorset as per Architects Drawing 605	1	No			
B	Type DK - size to suit structural ope 1300mm wide x 2250mm high; louvered single doorset as per Architects Drawing 606	3	No			
C	Type DL - size to suit structural ope 2030mm wide x 2250mm high; louvered double doorset as per Architects Drawing 606	1	No

	Juliet Balustrades					
	1. Description: Externally fixed metal balustrade installed to outer face of new masonry wall at window openings to create a 'Juliet balcony' with guarding height level of min. 1100mm above Internal FFL. 2. Contractor Responsibility:: Contractor is to complete the design and determine the type, sizes and numbers of fixings to meet design intent on Architect's drawings and schedules. 3. System manufacturer: Submit proposals 4. Performance: As clause 220. 5. Guarding 5.1. Material: Metal panels. 5.2. Finish: Polyester powder-coated, as section Z31. 6. Height (to upper surface of rail) 6.1. Above FFL:: 1100mm 7. Accessories: None. 8. Verification:: 8.1. Submittals:: Fabrication drawings showing elemental sizes, fixings, anchorages to supporting structure and joint details in accordance with design intent drawings. 8.2. Timing:: Before placement of orders. Fixed to through outer leaf to inner leaf and inclusive of all fixings, thermal plates, DPC, cavity tray, weep holes through brickwork, flashing etc. as required in sealing brickwork around steelwork and leaving perfectly waterproof					
B	1100mm high; inclusive of 50mm timber handrail; as per Architects Drawing 355 and Specification L37/160B	54	m

	Painting					
	Prepare and apply polyester powder coat to BS6497 to a minimum thickness of 60 micron, on steel					
A	Balustrades (measured both sides)	119	m2			
	1. Manufacturer: Dulux system D4041 OR Equivalent 2. Surfaces: new exterior non resinous softwood, hardwood, plywood 2.1. Preparation: Woods with a knot content above that specified in BS EN 942 should not be used. New wood should ideally be preservative impregnated, see BS 8413:2003. In some situations this may be mandatory. Thoroughly clean down to ensure all areas are free from dirt, grease and surface contaminants. Carefully remove any plaster or mortar deposits. Remove oils from surface by wiping with White Spirit. Abrade overall in the direction of the grain to remove any grey denatured timber, raised grain and round all sharp edges (a radius of 1 mm to 2 mm for timber other than sills and thresholds; 3mm for sills and thresholds) and *dust off. Apply two thin coats of an appropriate knotting solution to all knots and resinous areas and allow to harden. Ensure all surfaces are fully dry before proceeding. Note *When rubbing down dry and/or dusting off wear a suitable face mask to avoid the inhalation of dust. 3. Initial coats: 2 coats of Dulux Trade Weathershield Aquatech Preservative Basecoat + (BP) or equivalent. Make good all cracks, nail-holes, open joints and other imperfections with Dulux Trade Weathershield Exterior Flexible Filler or equivalent. 4. Finishing coats: 2 coats of Dulux Trade Weathershield Quick Drying Exterior Undercoat or equivalent of selected shade. One coat of Dulux Trade Weathershield Exterior Quick Drying Satin or equivalent of selected shade. All as per Architectes Specification M60/175B

EL (31) EXTERNAL WALL COMPLETIONS **Carried to Summary**					

	Description	Qty	Unit	Rate	€	c
	EL (32) INTERNAL WALL COMPLETIONS					
	INFORMATION					
A	This element of the work has been measured from Architects Drawings 120-123, 580-585, 610-615, Architects Internal Door Schedule, Architects Ironmongery Schedule, Architects Specification		Note			
B	The Structural Engineer's & Architects drawings and specifications are all complementry to each other and should be read in conjuction with one another.		Note			
C	For detailed description of workmanship and materials see specification.		Note			
D	All exposed hardwood and softwood shall be kept clean in preparation for decoration		Note			
E	Doorsets described as fire resisting are to be provided exactly in accordance with a specification describing construction and ironmongery which as when tested to BS 476: Part 8 or BS 476: Part 22: 1987 provided fire resistance of no less period than specified		Note			
F	Manufacturing Test Certificates, Reports, Supplements and Evaluations are to be provided as evidence that all functions, sizes and glazing arrangements that are to be supplied are approved.		Note			
G	All fire doors are to be identified by a permanently fixed small flush metal plate, indicating the period of fire resistance, manufacturer, year of manufacture and other pertinent details		Note			
H	Doors and screens (measured separately) in this section have not been fully described and the Contractor is to examine the joinery details and to include in his rates for all hardwood spacers, frames, heads, cills, jambs, mullions, transoms, plinths, doorstops, glazing beads, fillers etc. and all their associated labours, all exposed components to be glued and countersunk screwed only (securing frames i.e. holes, bolts and mortices in solid concrete blockwork are measured separately)		Note			
J	All Internal doors are to conform to part 1.9 (a,b,c,d,e,f) and diagram 5 and 6 of the TGD part M 2000		Note			
K	NOTE: Design Team preference for complete Door System manufacturer and final certification by one supplier (frame, ironmongery etc.). Where alternative is proposed method for certification by contractor should be submitted for Design Team approval		Note			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	Contractor is required to provide complete Door System manufacture and final certification by one supplier (frame, ironmongery etc.). Where alternative is proposed method for certification by contractor should be submitted for Design Team approval.		Note			
B	Doorsets and screens to be fully finished , decoration etc, before fitting on site. contractors to include here for all necessary protection to finished doorsets and screens, including for all necessary touch-ups etc. as required, prior to handover at completion of the building contract.		Item			
	Contractor to identify party that will act as ancillary certifier for complete doorset (Doorset ancillary certifier). Doorset ancillary certifier to ensure the following; All per Architect's Specification L20					
C	- that Fire Test Certification is available for all doorsets		Note			
D	- that Fire Test Certification for each doorset is compatible with proposed door frame detail, and with proposed gap under door (in particular if gap is required below door for air circulation)		Note			
E	- that doorset is installed in accordance with fire test certification, in particular in relation to gap between frame and ope, and between doorset and frame/ floor below		Note			
F	- that ironmongery proposed is fully compatible with Fire Test Certification for door and frame		Note			
G	- that proposed doorsets comply with both Part B for closing force requirements and Part M for opening force limits		Note			
H	- that minimum acoustic standards for entire doorset are met		Note			
J	- that all maglocks are installed and commissioned to ISEN13637		Note			
K	- that all fire rated glazed screens are fitted with appropriate glazing to ensure that integrity and insulation requirements are met		Note			
L	- Certification: Provide independently certified evidence that all incorporated components comply with specified performance requirements.		Note			
				To Collection €

A	725 x 2,250mm high; FD30, Include for supply and fitting ironmongery Set KR1014	4	No			

	Description	Qty	Unit	Rate	€	c
	1. Description: Refer to architectural drawings 600 to 605 for details: 2. Relevant door types:: A, M, Q, CF, CI, CH, CM, CN & CQ 3. Manufacturer: Submit proposals 4. Performance 4.1. Fire performance 4.1.1. Fire resistance: To IS EN 13501-2, E30. 4.1.2. Smoke leakage: Sa Sa. 4.1.3. Reaction to fire: To IS EN 13501-1, Class B-s3, d2 or better. 4.1.4. Evidence: As clause 115 4.2. Acoustic performance: To EN ISO 10140-2, sound reduction index Rw 35 db minimum. - unless otherwise stated on architectural drawings. 4.3. Mechanical strength: To IS EN 1192, Class 2 - unless otherwise stated on architectural drawings. 5. Door leaf 5.1. Core: laminated solid timber or 3 layer particleboard solidcore 5.2. Thickness: As required by manufactuters's performance evidence - nominal 44 mm. 5.3. Facings: Veneered MDF or plywood. 5.4. Veneer: European Oak (Quercus Petrea) Crown cut and book matched subject to approved sample 5.5. Lippings: 9mm solid hardwood continually bonded to core: note veneer runs over 5.6. Finish as delivered: 2 coats matt lacquer 6. Frame: As clause 330 7. Door Operation: Single Leaf & Double Leaf - refer to architectural drawings 8. Closer: Overhead concealed generally. Note that door types CM & CN are equipped with hold open systems 9. Architrave: As clause P20/120A 10. Glazing/ infill details: 10.1. Vision panels:: Circular vision panels - refer to architectural drawings 10.2. Side panel:: Fixed sideleaf - refer to architectural drawings 11. Beading: N/A 12. Ironmongery: Refer to ironmongery schedule 13. Perimeter seals: Fire and smoke seal & Acoustic seal as required to meet acoustic and fire performance 14. Other requirements: Hardwood doorstops. 15. Verification 15.1. Submittals: Product sample as specified, including integral accessories, with certification demonstrating compliance with the performance requirements of the system. Manufacturer's literature and/ or certification. Test results, report and certification from an accredited testing facility. CE Declaration of Performance or a third-party certification in respect of fire performance by an EU / NSAI-accredited third-party testing organization. Manufacturer's certification and warranties for a period of 15 years. 15.2. Timing: Before placement of orders Include for all necessary packer pieces etc. complete, all as per Architects Specification L20B/410C Single Doorsets & Frame

EL (32) INTERNAL WALL COMPLETIONS **Carried to Summary**					

Description	Qty	Unit	Rate	€	c
EL (33) & (34) FLOOR & STAIR COMPLETIONS					
INFORMATION					
This element of the work has been measured from the Architects Drawing Nos. 400, 401, 403, 500, 501, 502 and Architects Specification		Note			
This Element and the Architects and Engineers drawings and specifications are all complementary to each other and should be read in conjunction with one another.		Note			
For detailed description of workmanship and materials see specification.		Note			
The tenderers should examine the Architects and Engineers drawings and specifications and satisfy themselves as to the nature and extent of works outlined below and should include for all costs in connection with same.		Note			
Notes:					
1. The tenderer is required to provide and fix all fixings, supports etc. which may be necessary to complete the works.		Note			
2. "Notwithstanding that this Bill of Quantities is measured in accordance with the Agreed Rules of Measurement, Fourth Edition 2009, the Tenderer should note the following deviations at:		Note			
(a) grouting, drilling/forming holes in other construction for fixings deemed to be included within the referenced unit rate item		Note			
			To Collection €		

	Description	Qty	Unit	Rate	€	c
	Balustrades Including Handrail					
	Balustrade; Purpose Made Balustrades Panels with vertical bars, to stairs Component material, grade and finish as delivered: - Guarding: - [Balustrade posts to be 50 x 10mm mild steel flats @ 100mm c/c, on mounting plate at base (typically 120mm dia), fixed to side of pre-cast stair structure. Posts typically 50x10mm each, with size and spacing of elements as noted on details. Max post spacing 3 steps, or 900mm. Posts to be bolted to side of precast stairs with M12 resin anchor fixings, finished with dome headed nut. Fixings to be to contractor design to suit loading requirements as required by Building Regulations. - Infill panel frames to be formed from welded mild steel flats, typically 40x8mm, with size and spacing of elements as noted on details. Note curved end panel frames. Panel infill within frames to be mild steel round sections, typically 15mm diameter, welded to frames and equally spaced within panel. Max gap within infill panels to be less than 100mm. Panel fixings to posts to have nylon spacers. Handrails:- Handrail to be 50mm dia Iroko, with flat bottom rebated to take a 30x6mm flat. - Handrail connection to posts as shown in details - mild steel round sections, typically 15mm diameter, bent to 90deg with a consistent radius, welded into the gap between the paired post flats prior to installation, and connected to the handrail by a steel plate recessed into a rebate in the handrail. Workmanship: - Generally, posts and balustrades to be made separately and separately installed on site (ie.not pre-welded together). Allow for tolerance of 3-5mm between connecting elements. No site welding will be accepted for pre-finished metalwork. Joinery: [To section Z10]. Metalwork: [To Z11 generally, finish to Z11/780]. Other requirements: [Finish to be PPC coated to a selected RAL colour. Steel to steel bolted fixings to be flat headed and countesunk, or finished with a dome headed nut - Contractor to ensure that all balustrading, including all connections, complies with BS 6399.]. All per Architects Drawings and Specification Section L30/550D					
	Balustrades & handrail; all as per Architects Specification L30/550D and in accordance with Architects Specification L30/107 and to meet design intent as indicated on Architects Drawings 400, 401, 403, 500, 501, 502; inclusive of all fixings, welding etc. complete

	GLAZING: Special Glazing					
	Smoke Vents					
	Thermally broken powder coated aluminium glazed rooflight / AOV fitted with electrical / electronic control mechanism and mounted on manufacturers kerb designed to be laid over builder upstand in reinforced concrete to engineers detail. Activating rams to be located in concealed pockets at each side of the louvre. Unit is to be supplied as a complete package incorporating all controls for activation, interlinking with Fire alarm / firemans switch, as well as passive ventilation control fitted with automatic closing if so signaled by externally mounted rain sensor. all in accordance with the Works Requirements and in particular Architects drawing no.124 and specification clause L10/490A					
A	ope size to achieve 1.00m2 of free opening area	1	nr			
B	Extra over for upstand kerbs	1	nr			
C	roof access ladderl (Internal); all in accordance with the Works Requirements and in particular Architects drawing no.124 and specification clause N25/131	1	nr			
	METALWORK: Non Structural - Composite Items					
	Fall Prevention System					
	8mm stainless steel cable system on posts as per N25 specification and drawings. Posts may deform in the event of a fall but must not come apart - i.e. must be fully welded with no internal spring or other active mechanisms. All in accordance with EN 795 for use with Personal Fall Protection Equipment (PFPE measured elsewhere); Systems located to work as fall restraint, design to allow for full fall arrest in case of misuse; if true fall arrest required include for appropriate Rescue System. Weathering by others. Product; Skyway (046 9241771) Continuous Fall Prevention System including anti-pendulum anchors for safe access to 100% of the roof. Tenderer to have € 6.50m specific Professional Indemnity Insurance. all in accordance with the Works Requirements and in particular Architects drawing no. 124 and specification clause N25/210A					
	Cable, support posts and anti-pendulum anchors; (including all weathering of support posts)					
D	layout as per Architects drawing no.124	57	m

	Personal Fall Protection Equipment (PFPE)					
	1 no. ful body Harness, 2 no. 2.0m long energy absorbing Lanyards, 1 no. removable transfastener					
A	sets	2	nr			
	Metalwork: Non-Structural					
	External Ladders					
	Roof-Pro or equivalent free standing pedestrian step-over system; in galvanised mild steel; with adjustable pivot and threaded bases; inclusive of 2nr stair flights and central landing complete with handrails					
B	To provide clearance over ducting and / or pipework runs on roof; circa 800mm high x 150mm wide	6	no			
	Aluminium fixed ladder; to AOV (External)					
	Hooped Access ladder;: 1. Aluminium. Consisting of 48.3mm (Size 8) stringers set 400mm apart with rungs at 250mm centres. 2. Locations and Design Intent: As indicated on the Design Drawings. 3. The works shall conform with BS 5395: Part 3, and BS EN ISO 14122 Part 1, Part 2, Part 3 and Part 4. 4. Ladder system shall have Walk Through and Parapet Stepover Platform handrails on each side to bridge the gap to the roof surface. 5. Self-closing gate: Provide a self-closing safety gate to aid the user on and off the top of the ladder. 6. Ladder shall have hooped protection enclosure from gantry to height above finished floor level as indicated on the Design Drawings. 7. Stays: Set at 2.4m centres with a cage commencing 2.5m from ground level 8. Treads shall be flat profile with anti-slip surface finish. 9. Allow for fixing of service tray's to framework where required. 10. Fitting and Fixings: In accordance with the manufacturer's instructions; all as per Achitects Specification Clause N25 131					
C	approx 2.5m long	1	nr

Description	Qty	Unit	Rate	€	c
EL (41) WALL FINISHES EXTERNALLY					
GENERAL INFORMATION					
For further details refer to Architects drawings and specifications.		Note			
Location drawings for this Element are listed in the drawing registers.		Note			
It will be deemed that the Contractor has inspected the drawings, site and consulted all available information before submitting his tender.		Note			
STONEWORK: Stone Cladding					
DESIGN RESPONSIBILITY: The Architects drawings and specifications are indicative of the design intent and define the performance criteria, the mandatory geometry of the exposed surfaces including joint positions, and detail the required principal materials and visible finishes. The Specialist Sub-Contractor shall be responsible for developing and completing the design in accordance with the above and the other contract documents, taking into account any additional criteria which, with his specialist knowledge, he believes are relevant. The Specialist should refer to the drawings prepared by Nicholas O`Dwyer Consulting Engineers which describe the primary building structure which will be the basis of the secondary steel design prepared by the Specilaist. The Specilaist can put forward alternatives for consideration by the Architect. Additionally any suggested solutions described on the Architects drawings shall not in any way relieve the Specialist from his responsibility for the design and construction of the whole of the works; all as per Architects Specification H51 10 - 660		Note			
			To Collection €		

	Description	Qty	Unit	Rate	€	c
	Walls					
	Natural stonework cladding to East Block facade; SUPPORT STRUCTURE: Insitu conrete frame with blockwork infill; backing wall concrete blockwork. STONE SLAB STANDARD; standard to EN 1469: DENOMINATION; denomination to BS 12440; name; Irish Limestone; Petrological family Limestone; FACE DIMENSIONS; Face dimensions, length (l) x width (b): see Architects drawings; THICKNESS; minimum 40mm (subject to structural calculations);. COLOUR: Very Light Gray (N8) to Light Grey (N7); FINISH; sanded or dry honed; SAMPLES; samples to be provided; Finish: shotblasted. - Supplier: Submit proposals. - Quality: Free from vents, cracks, fissures, discolouration, or other defects deleterious to strength, durability or appearance. Before delivery to site, season thoroughly, dress and work in accordance with shop drawings prepared by supplier. FIXINGS: stainless steel fixings to BS8298-1 and 2; Contractor designed; all as per specification clause H51/230 230 and 305. JOINTS: - Type: sealant filled as clause 600. - Bond pattern: see drawings. - Width (nominal): 5mm external. - Profile: recessed. CAVITY WIDTH (nominal): see drawings - Air gap: 50mm. all in accordance with the Works Requirements and in particular Architects drawings and specification clause H51/110					
	< or = 300mm wide					
A	generally	75	m			
B	forming sill, per Architects Drawing 322 detail 15	5	m			
	> 300mm wide					
C	generally	132	m2			
	Extra over for

	STONEWORK: Ancillaries to Natural Stonework					
	Vapour Control Layer					
	Vapour control layer fixed to concrete structure behind cladding; MANUFACTURER: Tyvek Dupont or equivalent, Product Reference Airguard A2 FR; REACTION TO FIRE; to EN 13501-1 A2-s1, D0; WATER VAPOUR TRANSMISSION PROPERTIES; to EN 1931 - 4900u; WATER TIGHTNESS (2 kPA;); to EN1928; THICKNESS 1.5mm; all in accordance with the Works Requirements and in particular Architects specification clause P10/310A					
	> 300mm wide					
A	generally	132	m2			
	Insulation					
	Insulation behind stone cladding; THERMAL INSULATION: Type - typical PIR Lambda Value 0.021 W/mK; below ground level DPC: XPS - Lambda value 0.033 W/mK. Certification. - Agrement Certificate. FACE SIZE; to suit bracket spacing. THICKNESS: To achieve requried U-value of 0.18 W/m2K . Note that maximum U-value of the wall element is 0.18W/mK, taking account of fixings, interfaces and local restrictions. JOINTS: Vertical joints must be staggered and tightly butted. No gaps and free from mortar and debris. JOINTS: - Vertical joints must be staggered and tightly butted with no gaps and free from mortar and debris; PLACEMENT; secure against face of inner leaf. - Residual cavity: Clear and unobstructed. - Joints between boards, at closures and penetrations: all in accordance with the Works Requirements and in particular Architects specification clause H51/110/10					
	Between new walls					
B	150mm thick board - fixed to concrete structure with proprietary positive expansion fixings	132	m2			
	STONEWORK: Ancillaries to Natural Stonework					
	Anti Graffiti Coating					
	Clear anti-graffiti matt finish coating (fluorine based copolymer); all in accordance with the Works Requirements and in particular Architects specification clause H51/110/12					
	< or = 300mm wide					
C	generally	75	m

	> 300mm wide					
A	generally	132	m2			
	Flashings					
	ALUMINIUM: Coated sheet/ strip. - Alloy designation: EN AW-1199, 1080A, 1050A, 1200. - Temper: O or H12. - Finish: Polyester Powder Coated to standard non-metallic BS 4800 or RAL colour range, including RAL 9006 and RAL 9007 (colour TBC). PPC thickness: 60u. All as Z31. - Aluminium thickness: 3mm. DIMENSIONS: - Lengths: Not more than 2.0m, with end to end joints lapped not less than 100mm. - Cover to roofing upstand: Not less than 75mm, with bottom edge welted 15mm. FIXING: - Secret clip fixed to curtain wall stick system / parapet subframe. All to contractor's design. - End to end joints: butt jointed with epdm sealing strip under; external and internal corners should be welded and all welds ground down to provide a smooth and integral 3 dimensional profile. all in accordance with the Works Requirements and in particular Architects drawings and specification clause H72/420					
	Reveal Flashings					
B	generally	75	m			
	Sills					
C	generally	22	m			
	Cavity Barriers					
	Mechanical cavity barriers; MANUFACTURER: Rockwool Ltd or equivalent Frie Pro SP Firestop EN (SP FireStop EN 60; STANDARD; to BS EN 1366-4:2021; TYPE; Rigid; ; FACING; Metal foil laminate; FIRE PERFORMANCE; TO E1 60 to BS EN 13502-2; RECYCLED CONTENT; 20-25%; REACTION TO FIRE; EuroclassA1 Non Combustible; THICKNESS; 75MM; WIDTH; 1200mm; LENGTH 1000mm; COLOUR ; Blackall in accordance with the Works Requirements and in particular Architects Specification Clause P10/432A					
	150mm thick cavity

Description	Qty	Unit	Rate	€	c
Insulated Render Rendered external wall insulation system by Tradecraft Limited or equivalent. Reaction to Fire system performance in line with BS EN 13501-1: A2. Board adhesive:: Pariso Mince Caliso Adhesive Coat, to be applied either as a complete coverage to the insulation board or as a ribbon around the board and a minimum of 3 dabs across the centre line to give a minimum of 40% coverage once applied. Take care to ensure no adhesive encroaches between insulation boards to prevent the risk of thermal bypass to be applied no more than 15mm in thickness. Insulation: Mineral wool to BS EN 13162. Thermal conductivity:: 0.036 W/Mk. Board size: 1200 x 600mm. Density: 110 kg/m3. Minimum compressive strength: Compressive Strength 10 kPa. Method of fixing: Mechanical Fixing. Insulation - base plinth level: XPS insulation suitable for wet areas. Thermal conductivity:: 0.033W/mK. Mechanical fixing:: Rawlplug KI10 Masonry Anchor. Fixing type is hammer fixing with expansion pin. Length to be minimum of 135mm (insulation thickness + board adhesive thickness + existing render thickness + 35mm minimum embedment). Fixing length and quantity may change subject to pull out test results and wind loads for the building. Base coat:: Pariso Mince Maite to be applied 4 to 6mm. Ensure base coat is fully adhered to insulation, covers all fixing heads and all appropriate beads. Should the Pariso Mince Maite be required in two passes, ensure second pass is applied minimum 24 hours after the first.					

To Collection €

	Description	Qty	Unit	Rate	€	c
	Ensure IAVPC Mesh is no more on third in from the front line of Pariso Mince Maite base coat. Reinforcing Mesh: IAVPC Mesh. Mesh weight 160g/m2. Minimum edge overlap at joints 100mm. When installing, ensure it is encapsulated in the outer third of the Pariso Mince Maite base coat. At the corners of all opening install a mesh patch 300 x 300mm at 45 degrees to the main mesh layer. Install a mesh patch over all penetrations at 45 degrees to the main mesh layer ensuring a minimum 150mm edge distance from the patch to the penetration. For high impact areas install the following (no overlap at joints) prior to the application of the IAVPC Mesh. Primer:: Revlane+ Regulatuer: Acrylic dispersion priming coat, Colour as per decorative finish coat to be roller, brushed or spray applied ensuring 100% coverage of Pariso Mince Maite base coat in one coat. Coverage 0.25kg per m2. Allow 2 to 12 hours, depending on temperature and humidity, prior to the application of the finish coat. Decorative finish:: Revlane+ Siloxane Ignifuge. Grain size 1.6mm, Taloche Gros, Colour as per project design. To be applied using a plastic float and textured as per the sample reference panel. When applying it is important to keep a wet edge on the material. Coverage 8 to 10m2 per tub. Include for all necessary Beads/ trims & Base Track; Mill finished aluminium box base track. Length 2.5m All adjoining lengths to be connected using connection clips to facilitate line and level and linear expansion. All corners to be mitred, not butt jointed. Fixed at maximum 300mm centres back to the substrate. Include also for all necessary Gun applied sealant Sika EB25 to be applied as a surface sealant at all junctions, UpVC Frame seal bead with mesh wing etc complete; All in accordance with the Works Requirements and in particular Architects Specification Clause M21/210					
	To Blockwork - To achieve U-Value of 0.17W/m2K

Stud Partitions (Fire rated where specified)) **K110115A: Metal stud partition system REI60** 1. Description: 60 min fire rated partition for use forming compartment walls. 2. Partition type: Single row 70mm C studs 2.1. Centres: As per manufacturers guidelines to achieve require performance 3. Head condition: In situ concrete slab, Existing ribbed slabs & steel frame with timber joists 3.1. Deflection allowance: 25 mm maximum. 4. Structural performance 4.1. Strength grade: To BS 5234-2, Grade 'Medium duty' (MD) 4.1.1. Additional test requirements: Not required 4.1.2. Maximum height: 3800mm 4.2. Pattressing: 12 mm Plywood to be installed between studs between 600 mm and 1200 mm where required - as indicated on architectural drawings 4.3. Other requirements: Allow for weight of ceramic tiles, as section M40 5. Fire performance 5.1. Reaction to fire: A2 - s3, d2 5.2. Fire resistance of complete partition assembly: 60 minutes fire resistance for load bearing capacity, insulation and integrity in accordance with EN 1364-1:1999/EN 1365-1:2012/EN1365-2:2000 5.3. Fire performance partitions identification: Install fire performance labels to all new fire-rated partitions. 6. Fire separation 6.1. Services integration: The integrity of partition should not be breached to allow for the installation of services, e.g. pipes, wires, flues etc except where necessary to allow services pass through these compartment walls. Where services pass through these compartment walls or floors, they should be contained in fire-resistant ducts, and the opening of such ducts should be protected and fire-stopped. Baffle boxes are not accepted. 7. Acoustic performance 7.1. Standard: IS EN ISO 717 7.2. Weighted sound reduction index Rw (minimum) to BS EN ISO 717-1: 53 8. Metal framing: Type recommended by board manufacturer to complete the partition assembly and achieve specified performance. 9. Insulation: As recommended by board manufacturer to meet specified performance 10. Resilient layer: As recommended by board manufacturer to meet specified performance 11. Linings: Two layers 15 mm plasterboard as clause 404 each side - Unless otherwise recommended by board manufacturer to meet specified performance 12. Finishing: Skim coat plaster as clause 680 12.1. Primer/ Sealer: Primer to painted areas 12.2. Accessories: Beads/ stops as recommended by board manufacturer 13. Other requirements: Fire-stopping around services as section P12. Include for flexible Fire Resistant Sealant applied around both sides of perimeter to boarded sides of partition framework to achieve applicable required fire rating. All per Architects Specification Section K10					
A Height circa 2,850mm	19	m

Primer/ Sealer: Primer to painted areas 12.2. Accessories: Beads/ stops as recommended by board manufacturer 13. Other requirements: Fire-stopping around services as section P12					
A	Height circa 2,850mm	47	m			

	Description	Qty	Unit	Rate	€	c
A	Top of partition system comprising of 1layer of 50 x 25mm deep fire batt insulation, 1 layer of 15mm thick x 100mm high Glasroc F Firecase plasterboard each side; continuous intumescent fire sealant to achieve stated fire rating requirements; airtight/acoustic sealant to each side of plasterboard at junction with concrete soffit to comply with required Acoustic rating of partition type; inclusive of all required fixings etc. complete and as per typical details on Architects Drawing 510. All to achieve 60/60 fire rating	47	m			
	Extra over for the following; include for galvanised steel angle beads / stop beads as required					
B	Three -way intersection;	40	No			
C	Abutting other finishes	56	No			
	Forming openings to doors; include for galvanised steel angle bead / stop bead as required in the following range of sizes;					
D	Structural ope 500mm wide x 2250mm high (Single doors)	16	No			
E	Structural ope 1070mm wide x 2250mm high (Single doors)	16	No			
F	Structural ope 2000mm wide x 2250mm high (Double doors)	16	No			
	K10/422: Gypsum fibre board (reduced water absorption) Tilebacker H 1. Type: A plasterboard with water resistance properties suitable as a tile backing board in areas subject to high levels of moisture, such as kitchens, bathrooms, shower cubicles and wet rooms 2. Manufacturer: Gyproc OR Equivalent 2.1. Product reference: Glasroc H TILEBACKER OR Equivalent 3. Thickness: 12.5 4. Shear strength: NPD to EN 15283-1: 2008 +A1: 2009 5. Reaction to fire: A1 to EN 15283-1: 2008 +A1: 2009 6. Water vapour resistance factor: 10 to EN 15283-1: 2008 +A1: 2009 7. Thermal conductivity: 0.3W/mK to 8. Other characteristics: EN 15283-1: 2008 +A1: 2009 9. Exposed surface and edge profiles: Clean and undamaged. Suitable to receive specified finish					
G	Height circa 550mm (side of baths)	21	m			
H	Height circa 1,050mm	28	m			
J	Height circa 2,850mm	20	m			

To Collection €

	Description	Qty	Unit	Rate	€	c
	Shelf to top of low level wall comprising of 8mm toughened glass on plywood backer, inclusive of grounds, fixing, silicone sealant, all as per Architects Drawing 492, 493 & Specification					
A	Circa 260mm wide	28	m			
	K10/145A; Wall lining system (metal studs) Acoustic & services					
	1. Description: Independent wall lining system to provide acoustic seperation and accomodate building services. 2. Partition type: 30mm Gypframe lining channel - or equivalent 2.1. Centres: 300mm unless otherwise instructed as per manufacturers guidelines to achieve require performance 3. Services zone depth (between studs): 50mm 4. Wall lining height: 3000mm 4.1. Intermediate bracing: As per manufacturers guidelines to achieve require performance 5. Head condition: 5.1. Deflection allowance: 25mm maximum 6. Structural performance 6.1. Strength grade: To BS 5234-2, Grade 'Medium duty' (MD) 6.2. Pattressing: 12 mm Plywood to be installed between studs between 600 mm and 1200 mm where required - as indicated on architectural drawings 6.3. Other requirements: Allow for weight of ceramic tiles, as section M40 7. Fire performance 7.1. Reaction to fire: Class B - s3-d2 7.2. Fire resistance of complete wall lining assembly: NFR 8. Acoustic Performance: 8.1. Standard: IS EN ISO 717 8.2. Weighted sound reduction index Rw (minimum) to BS EN ISO 717-1:: 59 9. Metal framing: Type recommended by board manufacturer to complete the partition system and achieve specified performance. 10. Insulation: glass mineral wool insulation infill batt 10.1. Recycled content: 50% (minimum) to BS EN ISO 14021 11. Resilient layer: As recommended by board manufacturer to meet specified performance 12. Linings: One layers 15 mm plasterboard as clause 401. - Unless otherwise recommended by board manufacturer to meet specified performance 13. Finishing: Skim coat plaster as clause 680 13.1. Primer/ Sealer: Primer to painted areas 13.2. Accessories: Beads/ stops as recommended by board manufacturer					
B	Height circa 2,850mm	70	m			
C	Grounds to support kitchen fittings, etc.		Item

	Dry Lining					
	One layer of 12.5mm plasterboard; fixed to 50mm gypframe lining channels; fixed to blockwork / concrete walls. Plasterboard finishes: Skimmed (refer to Section M20) as indicated on the Design Drawings. All as before described and in accordance with Architects Specification K10					
A	Height circa 2,850mm	81	m			
B	Extra over for 50mm thick glass mineral wool insulation infill batt (tbc if requried)	231	m2			
	Forming openings to doors; include for galvanised steel angle bead / stop bead as required in the following range of sizes;					
C	Structural ope 1000mm wide x 2250mm high (Single doors)	4	no			
D	Structural ope 1270mm wide x 2250mm high (Single doors)	4	no			
	Pipe Casing					
	Composite Item					
	Boxing to pipework, vertical, Include for Softwood framework inclusive of any additional required supports. Type High density general purpose. Manufacturer/ Supplier: contractor's choice. Fire rating: Class 0 surface spread of flame. Finish: 3mm skim coat sanded and primed to receive painting to match walls. Linings: 1 layer 12.5mm gypsum and cellulose fibre high impact board over 1 layer 12.5mm plasterboard with high density acoustic core. Edges: Square. Fixing to supports: as per manufacturers instructions. 15mm shadow gap to all junctions with contrasting finishes. Include for filling cavity with compacted mineral wool insulation. Include also for all required sealing to achieve stated fire resistance					
	To achieve 60min fire resistance					
E	800 x 300mm; 4 sided boxout (vertical height measured)	52	m			
F	750 x 250mm; 2 sided boxout (ditto)	43	m

EL (42) WALL FINISHES INTERNALLY **Carried to Summary**					

Description	Qty	Unit	Rate	€	c
EL (43) FLOOR FINISHES					
INFORMATION					
This element of the work has been measured from Architects Drawings 120-123, 140-143, 480-487, 491-499 and Architects Specification		Note			
This Element and the Architects and Engineers drawings and specifications are all complementary to each other and should be read in conjunction with one another.		Note			
For detailed description of workmanship and materials see specification.		Note			
The tenderers should examine the Architects and Engineers drawings and specifications and satisfy themselves as to the nature and extent of works outlined below and should include for all costs in connection with same.		Note			
Notes:					
1. Power floated and screeded concrete floor slabs are to be finished to a sufficient level to obviate the necessity for the spreading of levelling compounds for all floor coverings measured within this element. Should it arise that it becomes necessary to spread levelling compounds as a preliminary to laying the floor finishes, the cost of this work will be deemed to be included in the prices against the various items of work of floor finishes					
2. The Contractor is to include in his tender for properly curing and drying out concrete ground floor slabs within the limits of the building programme to attain minimum moisture content as recommended by the manufacturers of the relevant sheet and brush applied floor coverings measured within this element; if these moisture levels are not achieved at the time of laying, then the contractor will be required to apply an approved patent trowel applied damp proof membrane over the slab and patent self levelling screed over same at his own expense					
3. The Contractor is solely responsible for ensuring that the concrete floor slabs are sufficiently dried out before any floor finishes are laid.					
4. The Contractor is to include for any required protection of Acoustic Underlay and Floor Finishes prior to handover					
			To Collection €		

	Description	Qty	Unit	Rate	€	c
	WOODWORK: Boarding and Second Fixings					
	1. Quality of wood and fixing: To BS 1186-3. 1.1. Species: Contractor submittal 1.2. Class: CSH class 1. 2. Moisture content at time of fixing: 6-10 % 3. Preservative treatment: n/a 4. Profile: To match existing historic skirting in Convent building 4.1. Finished size: Nominal 250mm high x 19mm - to match existing 5. Finish as delivered: Paint finish 6. Fixing: screwed and pelleted or as noted on the drawings.					
A	250 x 19mm	928	m			
	Matwell to Entrances					
	High traffic entrance matting system; Contractor to submit proposals to Architects approval Arrangement: Inset internal. Material: PVC scraper wipers on aluminium base. Pattern: Open cell. Colour: Charcoal. Integral accessories: Aluminium matwell frame.					
B	size overall 1200mm x 2200mm wide	1	Nr			
	SHEET FLOORING					
	Acoustic Underlay					
	1. Description: Acoustic underlay 2. Material: Two-layer compound with rubber granules and rubber mat with PU elastomer bonding 3. Performance: To achieve TGD E requirement for Sound on separating floors - Weighted reductionin impact sound pressure level of not less than 17dB when measured in accordance with IS EN ISO 717-2 - when combined with overall floor buildup 4. Product: Damtec estra or Equivalent 5. Location : As shown on architect's floor details - To tiled areas generally 6. Background/ base: In situ concrete or levelling compound as required					
	Laid on concrete base					
C	To floors > 300mm wide	881	m2			
	Smoothing / Levelling Underlayment Compound					
	Levelling Compound					
	Cement based, all as per Architects Drawings and Architects Specification.

	Should the substrate not achieve the required humidity level (noted under Specification clause M50/150A) prior to laying of the underlay, prepare and apply Epoxy Resin Damp Proof Membrane as per Specification Clause M50/460, inclusive of primer where necessary and laid in two coats where necessary in accordance with the Manufacturers Instructions and all as per Architects Drawings and Architects Specification					
	Laid on concrete base					
A	To floors > 300mm wide	881	m2			
	Sheet Flooring					
	Linoleum flooring all as per Specification M50/150B; 4mm thick; Colour and pattern - to be selected by Architect; all in strict accordance with the Manufacturers Instructions and Specification Section M50					
B	>300mm	630	m2			
	Vinyl flooring all as per Specification M50/150A; 2mm thick; Colour and pattern - to be selected by Architect; all in strict accordance with the Manufacturers Instructions and Specification Section M50					
C	>300mm	25	m2			
	Carpet					
	1. Manufacturer: Tretford OR Equivalent 1.1. Product reference: Interlifr OR Equivalent 2. Standard: to IS EN 14041 3. Location: Carpet tiles to offices and staff accomodation 4. Base: Existing concrete slab / Raised access floor on third floor 4.1. Preparation: As clause 420 5. Underlay: Bonded 6. Properties 6.1. Reaction-to-fire classification: To BS EN 13501-1, Class Bfl 6.2. Type: Carded fibres formed into a continuous corrugation and bonded to a 100% postconsumer recycled PET backing. 6.3. Composition: Pile composition is 70% undyed goat hair and 30% nylon 6.4. Classification to BS EN 1307 6.4.1. Levels of use class: 33 6.4.2. Luxury rating class: LC2 6.5. Colour/ pattern: tbc 7. Method of laying: full spread glued or installed using tack strips. All adhesive should be free of solvents and VOC. All as per Architects Specification M50/130A					
D	>300mm	114	m2			

	Description	Qty	Unit	Rate	€	c
	Sundries					
	Separation Strips					
A	Brushed stainless steel edge trim as CAT SSE or equivalent, mechanically fixed in accordance with Manufacturers instructions and per Architects Specification M50	104	m			
	FLOOR, WALL & CEILING FINISHES: Tile, Slab & Mosaic Finishes					
	Porcelain tiling as per Specification M40/110C; 150mm x 150mm x 7.5mm floor tile; Colour - to be selected by Architect; adhesive fixed onto acoustic underlay (underlay elsewhere measured); grouted joint width 2-3mm; all in strict accordance with the Architect's Finishes Schedule and Specification Section M40					
	Floors					
B	> 300mm	80	m2			
	Insulation (Air tightness)					
	Description: Spunbonded polypropylene composition with polyolefin coating with non-woven fleece fabric and acrylic and butyl self-adhesive strips, used to provide an internal airtight seal.					
C	to wall / floor junction	420	m			
	PAINTING & DECORATING: Painting					
	1. Description: Purpose specific 2 or 3 part coatings with integral slip resistance coefficient >12 2. Manufacturer: Submit proposals 3. Surfaces: power floated concrete 3.1. Preparation: ensure base is dry and free from surface contamination 4. Initial coats: elastomeric levelling compound 4.1. Number of coats: as per manufacturer's guidelines 5. Finishing coats: May include carborundum flakes OSA hand scattered to ensure compliance with Slip resistance coefficient requirements 5.1. Number of coats: as per manufacturer's guidelines; and all in strict accordance with the Manufacturers Recommendations and Architects Finishes Schedule and Specification Clause M60/180					
	Floors					
D	> 300mm	32	m2			

	Description	Qty	Unit	Rate	€	c
	1. Manufacturer: Dulux system D1213 OR Equivalent 2. Surfaces: new interior hardwood and non resinous softwood 2.1. Preparation: New wood should be ideally preservative impregnated, see BS 5268 and BS 5589. Clean to ensure free from dirt and grease etc. Remove oils from surface of wood by wiping with Dulux thinner 41 or White spirit. Abrade to remove sharp edges and any raised grain. Treat knots and resinous areas by removing resin and applying a thin coat of Dulux Knotting solution, serious troublesome knots should be cut out and replaced with sound wood. Ensure all surfaces are fully dry before proceeding. 3. Initial coats: one coat Dulux MDF primer undercoat thinned 1 to 5 as manufacturers recommendations 4. Finishing coats: Two coats Dulux Trade Diamond Eggshell Finish					
	General Surfaces					
A	girth not exceeding 300mm; skirtings	928	m

	Ceiling Finishes					
	Soffit of roof slab					
	1. Description: Suspended ceiling system for use generally with gysum plasterboards. 2. Standard: To IS EN 13964 3. Evidence of compliance: Submit Declaration of Performance (DoP) & evidence of CE marking 4. Lining board: 12.5mm plasterboard as clause 401 generally 12.5 mm plasterboard as clause 403 for use in bathrooms and other wet /humid environments as inidicated on architectural drawings. 4.1. Finishing: Skim coat plaster as clause 680 4.1.1. Primer/ Sealer: Primer to painted areas. Type recommended by lining board manufacturer for vapour control in in bathrooms. 4.2. Accessories: Beads/ stops as clause 692 5. Suspension system: As recommended by lining manufacturer to complete the ceiling system and achieve specified performance. 5.1. Grid type: Double with primary channel. 5.2. Hangers: Type recommended by board manufacturer 5.2.1. Length: To give ceiling soffit height above finished floor level of 2700 mm - unless otherwise specifed on architectural drawings. 6. Access units: Required as clause 431 - As indicated on architectural drawings 7. Integrated services fittings: Refer to Mechanical & Electrical Engineers drawings and specifications 8. Other requirements: 9. System performance 9.1. Standard: To IS EN 13964 9.2. Structural: The ceiling system must safely support all anticipated loads including services fittings. 9.2.1. Uniformly distributed load (maximum): 0.6 kN/m2 9.2.2. Additional loads/ pressures: luminaires and other M+E fittings-refer to M+E drawings and data sheets to be provided by specialist contractors 9.2.3. Deflection of grid between points of support (maximum): 0.0025 x span. 9.3. Fire performance 9.3.1. Reaction to fire: Class B - s3-d2 9.4. Airborne sound insulation (complete floor and ceiling assembly) 9.4.1. Weighted sound reduction index, Rw (minimum), to BS EN ISO 717-1: 50 dB. All in accordance with Architects Specification K10/215					
A	>300mm	18	m2			
	15mm thick plasterboard, fixed to soffit of stairs inclusive of proprietary metal channels, fixings, sealing, 3mm skim coat of finishing plaster, complete					
B	>300mm wide; <150mm depth (soffit of landings)	33	m2			
C	>300mm wide; <150mm depth; sloping (soffit of stair flights)	24	m2			

To Collection €

	Description	Qty	Unit	Rate	€	c
	1 layer 15mm fireline board on and including 50 x 40mm softwood battens, inclusive of all required fixings, framing, trims, sealing, 3mm coat of finishing plaster, complete					
A	> 300mm wide; vertically to cheeks of light shafts	11	m2			
	Accessories					
B	Perimiter trim to form shadow gap	18	m			
	Painting					
	1. Manufacturer: Dulux D154 OR Equivalent 2. Surfaces: Plastered blockwork or plasterboard 2.1. Preparation: Clean down all surfaces. Seal with thinned coat Trade Dulux Ecosure or equal and approved 3. Initial coats: One thinned Trade Dulux Ecosure Matt or equivalent 4. Finishing coats: One thinned Trade Dulux Ecosure Matt or equivalent					
C	To stairwell walls	196	m2			
D	<300mm	45	m			
E	To stairwell ceiling	18	m2			
F	To soffit of raking stairflights	24	m2			
G	To soffit of landings	33	m2			
	Background surfaces to be prepared in accordance with specification M60; apply (1) initial coat of Wood Primer; (2) undercoats; (1) finishing coats of Gloss Paint; Colour - to be selected by Architect from sample colour range; and all in strict accordance with the Architects Finishes Schedule and per Specification Section M60					
H	Skirtings, girth <300mm	61	m			
J	Ditto last; to profile of steps	26	m			
K	300 x 19mm, to edge of landings	19	m			
L	Ditto last, raking, to edge of stairflight (stringer) to profile of steps	26	m			
				To Collection €

EL (44) STAIRS FINISHES **Carried to Summary**					

	Description	Qty	Unit	Rate	€	c
	EL (35) & (45) SUSPENDED CEILINGS & FINISHES					
	INFORMATION					
A	This element of the work has been measured from Architects Drawings 120-123, 140-143, 480-487, 491-499 and Architects Specification		Note			
B	The Architects drawings and specifications are all complementry to each other and should be read in conjunction with one another.		Note			
C	The Contractor is advised that the Works Requirements and Pricing Documents are all complementary to each other and should be read in conjunction with one another.		Note			
D	For detailed description of workmanship and materials refer to specification.		Note			
	Floor Wall & Ceiling Finishing: Suspended Ceilings					
	NOTES:					
E	1. The Tenderers attention is drawn to the fact that the rates for suspended ceilings should include for all perimeter members to columns, wall projections or the like; rates are to include for all fixings to complete the works		Note			
F	2. The Contractor is advised that the following measurement and descriptions are to be read in conjunction with the Architects Drawings and Specifications listed as tender documents within the Preliminaries Section of the Bill of Quantities		Note			
G	3. Work areas not exceeding 4.0 sq.m on plan have not been measured separately and Contractors shall make due allowance in their rates		Note			
H	4. Rates are to include for all labours in connection with the following work including accurately setting out and fitting of suspended ceilings around surface features		Note			
	Rates for suspended ceilings are to include for:					
	a) Notching and cutting around columns or the like or at the edge of the works unless measured separately					
	b) Any items necessary for the satisfactory completion of the works					
				To Collection €

	1. Description: Suspended ceiling system with seamless set perforated plasterboard for purpose of acheiving acoustic performance. 2. Standard: To IS EN 13964 3. Evidence of compliance: Submit Declaration of Performance (DoP) & evidence of CE marking 4. Manufacturer: Decor systems OR Equivalent 4.1. Product reference: Vogl OR Equivalent 5. Fire performance 5.1. Reaction to fire: Class B - s3-d2 6. Acoustic performances: 6.1. Area:: Absorbent material should cover an area equal to or greater than the floor area of the room. 6.2. Standard: Class C or better, rated according to I.S. EN ISO 11654. 7. Lining board: 7.1. Finishing: As recommended by board manufacturer 7.2. Perforated area: 9.5 % 7.3. Perforation pattern: 8/15/20 round 7.4. Accessories: beads/ stops recommended by lining board manufacturer 8. Suspension system 8.1. Grid centres: As recommended by lining manufacturer to complete the ceiling system and achieve specified performance 8.2. Hangers: 8.2.1. Length: To give ceiling soffit height above finished floor level of 2700 mm - unless otherwise specifed on architectural drawings. 8.2.2. Centres: As recommended by lining manufacturer to complete the ceiling system and achieve specified performance 9. Insulation: Acoustic fleece - block 9.1. Thickness: As recommended by lining manufacturer to complete the ceiling system and achieve specified performance. 10. Access units: As Clause 432 11. Integrated services fittings: Refer to Mechanical & Electrical Engineers drawings and specifications. All in accordance with Architects Specification K10/220					
A	Depth of suspension <150mm	133	m2			
	Access Hatches					
	1. Manufacturer: Submit proposals 2. Type: Concealed circular frame with beaded frame 2.1. Sizes: See ceiling plans - max diameter 600mm 3. Frame: Galvanised steel, polyster powder coated 4. Panel: Galvanised steel, polyster powder coated., colour TBC 5. Lock: Unitwist door hanging mechanism with restraining safety chain. Inclusive of all associated softwood timber support framework. All as per Architects Specification					
B	Circa 575mm diameter	143	No			
	1. Manufacturer: Submit proposals 2. Type: As recommended by lining manufacturer in clause 220 to complete the ceiling system and achieve specified performance 2.1. Sizes: See ceiling plans 3. Frame: Galvanised steel 4. Panel: galvanised steel for tiling with concealed pivot 5. Lock: budget lock

	EL (47) ROOF FINISHES					
	GENERAL INFORMATION					
	For further details refer to Architects drawings and specifications.		Note			
	Location drawings for this Element are listed in the drawing registers.		Note			
	It will be deemed that the Contractor has inspected the drawings, site and consulted all available information before submitting his tender.		Note			
	ROOFING, CLADDING & WATERPROOFING: Mastic Asphalt, Waterproof and Gas Proof Non-Metal Flexible Sheet Coverings					
	All work is to be carried out in accordance with the Single Ply Roofing Association Design Guide, in strict accordance with the manufacturer`s recommendations and where relevant BS 8217:2005 Code of Practice for Built-up Felt Roofing and BS 6229:2003 Code of Practice for Flat Roofs with Continuously Supported Coverings		Note			
	Roof coverings					
	Single layer polymeric sheet warm deck roof covering; SUBSTRATE: concrete deck laid level (measured elsewhere). ROOF COVERING SYSTEM: Bauder K5K or equivalent 5mm thick, 250g/m2 polyester reinforced elastomeric bitumen torch applied capping sheet ; COLOUR; Charcoal Grey; UNDERLAYER: Bauder G4E or equivalent 4mm thick 200g/m2 glass fibre reinforced elastomeric torch applied bitumen underlayer. INSULATION: Thin-R FR/BGM Unilin or equivalent PIR insulation board 140mm thick to achieve maximum thermal transmittance value of 0.16W/m2K. AIR AND VAPOUR CONTROL LAYER: Bauder TEC KSD FBS or equivalen 2.5mm thick elastomer bitumen air and vapour control layer with self adhesive membrane; all in accordance with the Works Requirements and in particular Architects drawing nr. 124 and specification clause J41/110					
	Horizontal					
A	> 300mm wide	231	m2			
	Vertical

	EL (59) MECHANICAL INSTALLATION					
	General Information					
	The Contractor is advised that this Element and the Works Requirements are all complementary to each other and should be read in conjunction with one another		Note			
	This element of the work has been measured from Services Engineers Mechanical Specification and Drawings as per the Services Engineers Document Issue and Register Sheet for Mechanical Installation		Note			
	It will be deemed that the Contractor has inspected the works requirements, site and consulted all available information before submitting his tender.		Note			
	ALTERNATIVE RULES FOR THE MEASUREMENT OF MECHANICAL INSTALLATION					
	Deviation from ARM 4					
A	The Mechanical Installation has been measured in accordance with the Agreed Rules of Measurement ARM4 Supplement 2- Agreed Alternative Rules for the Measurement of Services Installations. The Mechanical Installation is to be priced in accordance with said Measure, Detailed Design, Performance Specification and Drawings prepared by the Services Engineer and included in the Works Requirements.		Item			
	DRAINAGE INSTALLATION					
	Distribution system					
	Pipework; all as per Services Engineers Mechanical Specification and Services Engineers Drawings M1, M2, M3, M4 & M5					
B	Waste pipework; polyethylene soil, waste and overflow pipework above ground; including bottle traps, access points, connectors, safety discharges; sizes as per drawings		Item

G	Supply Grilles; 4 way diffuser style supply grilles complete with grille box; overall size 200 x 200mm; as per Supply Grilles Schedule	3	nr			
	Extract Grilles					
H	Extract Grilles; 4 way diffuser style extract grilles complete with grille box; overall size 200 x 200mm; as per Extract Grilles Schedule	2	nr			
	External Louvres; square neck louvres complete with back draft shutter; as per Louvres Schedule					
J	External Louvres; overall size 150 x 150mm	9	nr			
K	External Louvres; overall size 200 x 200mm	11	nr			
L	External Louvres; overall size 250 x 250mm	2	nr			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	External Louvres; overall size 300 x 300mm	2	nr			
	Distribution system					
	Ductwork; all as per Services Engineers Electrical Specification and Services Engineers Drawings M15, M16, M17 & M18					
B	Supply air system ductwork; sizes of ducting as per drawings		Item			
C	Extract air system ductwork; sizes of ducting as per drawings		Item			
	Ductwork Fittings and Accessories; all as per Services Engineers Electrical Specification and Services Engineers Drawings M15, M16, M17 & M18					
	Fire Smoke Dampers; circular motorized smoke and fire damper; mounted in ventilation ducts					
D	Fire Smoke Dampers; S30 fire rating	5	nr			
E	Fire Smoke Dampers; S60 fire rating	5	nr			
	Dampers					
F	Temperature and Humidity Sensor	1	nr			
	Insulation					
	Insulation; all as per Services Engineers Electrical Specification and Services Engineers Drawings M15, M16, M17 & M18					
G	Insulation to supply air system ductwork; sizes of ducting as per drawings		Item			
H	Insulation to extract air system ductwork; sizes of ducting as per drawings		Item			
	General

EL (59) MECHANICAL INSTALLATION **Carried to Summary**					

	Description	Qty	Unit	Rate	€	c
	EL (69) ELECTRICAL INSTALLATION					
A	ELECTRICAL INSTALLATION					
	General Information					
	The Contractor is advised that this Element and the Works Requirements are all complementary to each other and should be read in conjunction with one another		Note			
	This element of the work has been measured from Services Engineers Electrical Specification and Drawings as per the Services Engineers Document Issue and Register Sheet for Electrical Installation		Note			
	It will be deemed that the Contractor has inspected the works requirements, site and consulted all available information before submitting his tender.		Note			
	ALTERNATIVE RULES FOR THE MEASUREMENT OF ELECTRICAL INSTALLATION					
	Deviation from ARM 4					
B	The Electrical Installation has been measured in accordance with the Agreed Rules of Measurement ARM4 Supplement 2 - Agreed Alternative Rules for the Measurement of Services Installations. The Electrical Installation is to be priced in accordance with said Measure, Detailed Design, Performance Specification and Drawings prepared by the Services Engineer and included in the Works Requirements.	1	Item			
	GENERAL SERVICES, SMALL POWER & COMMUNICATIONS SYSTEM INSTALLATIONS					
	System					
C	General services, small power & communications services systems to West Block; all as per Services Engineers Electrical Specification and Services Engineers Drawings E1, E2, E3, E4, E5 & E24		Item			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Equipment					
	Equipment; all as per Services Engineers Electrical Specification/Scope of Work document					
	Convent					
A	Sub Mains Distribution Board; Locations - Each Floor; all as per Services Engineers Electrical Specification and Services Engineers Drawings E1, E2, E3, E4, E5 & E24	1	nr			
B	Mains Domestic Distribution Board; Locations - Each Apartment; all as per Services Engineers Electrical Specification and Services Engineers Drawings E1, E2, E3, E4, E5 & E24	15	nr			
C	Mechanical Control Panel; Locations - Ground Floor; all as per Services Engineers Electrical Specification and Services Engineers Drawings E1, E2, E3, E4, E5 & E24	1	nr			
D	Mains Distribution Facility; Locations - Ground Floor; all as per Services Engineers Electrical Specification and Services Engineers Drawings E1, E2, E3, E4, E5 & E24	1	nr			
E	Comms cabinet; Location; Third Floor; complete with Main distribution facility, door access gateway, Comms Junction box; 2 No. 20A fused spur; Network Video Recorder	1	nr			
	Fittings; all as per Services Engineers Electrical Specification and Services Engineers Drawings E1, E2, E3, E4, E5 & E24					
	Convent					
F	Television Outlets; CAT 6A cabling	15	nr			
G	Double Data Point; CAT 6A cabling (2 No. RJ45 to be wired in separate conduit to Main Distribution Facility)	15	nr			
H	TV Outlets; (to be wired in separate conduit to TV patch panel)	15	nr			
J	13A Twin switched outlet complete with Part M compliant socket outlet	89	nr			
K	16A Twin switched outlet complete with Part M compliant socket outlet' located over counter	30	nr			
L	20A Switched fused spur outlet outlet complete with neon light (Ventilation Fan)	15	nr			
M	13A Switched fused spur outlet outlet complete with neon light (Motorized Valve)	15	nr			

To Collection €

	Description	Qty	Unit	Rate	€	c
A	13A Unswitched fused spur outlet outlet complete with neon light (Fire Alarm Panel)	1	nr			
B	13A Unswitched fused spur outlet outlet complete with neon light (Door Access Control); IP65 rated	1	nr			
C	Extract Fan location	15	nr			
D	Wiring to Door Access Control Unit	4	nr			
E	Door Access Gateway WIFI Access Hub; interconnected with the Main Distribution Facility	4	nr			
F	Room Thermostat	48	nr			
G	13A Switched fused spur outlet; outlet complete with neon light (Room Thermostat)	48	nr			
H	13A Unswitched fused spur outlet; outlet complete with neon light (Automatic Opening Vent)	5	nr			
J	13A Switched fused spur outlet; outlet complete with neon light (Heat Recovery Unit)	5	nr			
K	13A Switched fused spur outlet; outlet complete with neon light (2-3 Port Motorized Valve)	22	nr			
L	13A Unswitched fused spur outlet; outlet complete with neon light (Automatic Opening Vent)	5	nr			
M	Single Data Point; CAT 6A cabling (to be wired in separate conduit); WIFI future connection	15	nr			
N	13A Switched fused spur outlet; outlet complete with neon light (Disabled Refuge)	2	nr			
P	13A Switched fused spur outlet; outlet complete with neon light (Disabled Refuge)	2	nr			
Q	13A Switched fused spur outlet; outlet complete with neon light (Fridge Freezer)	15	nr			
R	32A 3 phase surface socket outlet; Lift; IP67 rated	4	nr			
S	Test Switch for AOV; complete with control panel	4	nr			
T	13A Unswitched fused spur outlet; outlet complete with neon light (Future Intruder Alarm)	1	nr			
U	Leak Detection Unit; complete with floor probe	1	nr			
V	32A 3 phase surface socket outlet; Outdoor air to water heat pump; IP66 rated	15	nr			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	13A Switched double outdoor power socket, IP66	12	nr			
B	Future WIFI box location;	9	nr			
C	Wall mounted extract fan control switch (RF/230V)	15	nr			
D	Television Junction Box; allow for 2 No. x 60.0m coaxial cable	15	nr			
E	20A Switched fused spur outlet; outlet complete with neon light (Dish Washer)	6	nr			
F	20A Switched fused spur outlet; outlet complete with neon light (Washer/Dryer)	8	nr			
G	32A Switched Isolator outlet; outlet complete with neon light (Cooker)	6	nr			
H	13A Switched fused spur outlet; outlet complete with neon light (Kitchen Extract Fan)	6	nr			
J	Lift Panel	4	nr			
K	13A Switched fused spur outlet; outlet complete with neon light (Manifold)	1	nr			
L	230V power supply to Trace Heating; complete with IP67 rated junction box	1	nr			
M	13A Switched fused spur outlet; outlet complete with neon light (Pressurisation Set)	1	nr			
N	External Frost Thermostat	1	nr			
P	External Sensor	1	nr			
Q	13A Switched fused spur outlet; outlet complete with neon light (Circulating Pump)	4	nr			
R	20A Switched fused spur outlet; outlet complete with neon light (Immersion)	1	nr			
S	13A Switched fused spur outlet; outlet complete with neon light; Part M compliant (Boiler)	1	nr			
T	Meters	4	nr			
U	13A Single switched socket outlet; outlet complete with neon light (Extract Fan)	2	nr			
V	13A Single switched socket outlet; outlet complete with neon light (Indoor Air to Water Unit)	15	nr			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
A	25A Single switched socket outlet; outlet complete with neon light (External Air to Water Unit)	15	nr			
B	Electronic Room Stat	30	nr			
C	External Door Bell Push; Vandal proof	15	nr			
D	Indoor Door Bell Chime unit	15	nr			
E	Double Data/Phone point service outlet (wiring in separate conduit to Data/ Telephone junction box (ATB)	3	nr			
F	Double Data/Phone point service outlet (wiring in separate conduit to Data/ Telephone junction box (ITB)	3	nr			
G	Pro-S 24V power supply and and damper control	28	nr			
H	13A Single switched socket outlet; outlet complete with neon light (Extract Fan)	4	nr			
J	13A Single switched socket outlet; outlet complete with neon light (Manifold)	2	nr

EL (69) ELECTRICAL INSTALLATION **Carried to Summary**					

	Description	Qty	Unit	Rate	€	c
	EL (66) TRANSPORT INSTALLATION					
	General Information					
	The Contractor is advised that this Element and the Works Requirements are all complementary to each other and should be read in conjunction with one another		Note			
	This element of the work has been measured from Service Engineers drawings together with services engineers Electrical Services Engineer's General Specification, Site Specific Specification, Equipment Schedules, Equipment Data Sheets, Engineers's Scope of Works Documents & specifically the Lift Specification		Note			
	It will be deemed that the Contractor has inspected the works requirements, site and consulted all available information before submitting his tender.		Note			
	ALTERNATIVE RULES FOR THE MEASUREMENT OF LIFT INSTALLATION					
	Deviation from ARM 4					
	The Electrical Installation has been measured in accordance with the Agreed Rules of Measurement 4, Supplement 2 - Agreed Alternative Rules for the Measurement of Services Installations. The Lift Installation is to be priced in accordance with said Measure, Detailed Design, Performance Specification and Drawings prepared by the Services Engineer and included in the Works Requirements.	1	Note			
	LIFT INSTALLATIONS					
	System					
A	Lift installations services system installation all as per Service Engineers drawings together with services engineers Electrical Services Engineer's General Specification, Site Specific Specification, Equipment Schedules, Equipment Data Sheets, Engineers's Scope of Works Documents & specifically the Lift Specification		Item			
				To Collection €		

	Description	Qty	Unit	Rate	€	c
	Equipment TYPE OF LIFT: Electric Drive P-Passenger elevator; COMPLIANCE CODE: The Lift Installation shall comply with EN81-20:2014 Safety rules for the construction and installation of lifts - Lifts for the transport of persons and goods, EN81-73:2016 Behaviour of lifts in the event of fire, EN81-70:2018 Accessibility to Lifts for persons including persons with disability; TYPE OF DRIVE Gearless; NUMBER OF FLOORS 4 No.: LIFT TRAVEL DISTANCE 4 No. Floors @ 3.4m per floor; RATED SPEED 1.0m/s RATED CAPACITY: 630kg/8 No. persons; SHAFT DIMENSIONS 1.65m wide x 1.80m deep; SHAFT CONSTRUCTION, Concrete; PIT HEIGHT 1.10m; HEADROOM 3.40m; ENTRANCES: 4 No. front entrances; FIRE RESISTANCE 2 hour rating (FD120); MACHINERY LOCATION; Top of lift shaft; CONTROL SYSTEM, Full Collective. Simplex; MACHINE OUTPUT 4kW; ELECTRICAL SUPPLY: Nominal supply current with shaft lighting 11A; Starting supply curent 13A; Main Fuses 10A; Power Supply, machinery 3 x 400/50 V/hZ; Power supply 230/50V/Hz; GUIDES AND ATTACHMENTS; Expander bolts fixing Car with sliding shoes; ROPES; Steel hoisting ropes; CAR DIMENSIONS 1.10m wide x 1.40m deep x 2.10m high: DOOR SIZE 0.90m wide x 2.00m high LIFT CAR FIINISHES: Floor Finishes, Ceiling Finishes Wall Finishes, Handrails and Operating Panel and Indicators as per Section 3 of the Lift Specification: LIFT CAR FITMENTS: Lift car fitments all as per Section 3 of the Lift Specification; LIFT CAR/EMERGENCY LIGHTING: all as per Section 3 of the Lift Specification; COMMUNICATION: al as per Section 3 of the Lift Specification					
A	Passenger Lift	1	Item

	Blinds To Apartments					
	Manually operated roller blinds. By Silent Gliss Ltd or equivalent. Roller Blind - Chain Operated - Silent Gliss SG 4910 (Dimout) or equivalent. To BS EN 13120. Headrail. Material: Anodized aluminium. Colour: White. Blinds Material: Trevira CS flame retardant. Colour: Allow for full colour range. Tube. Material: White powder coated aluminium. Diameter: 41mm. Operation: Chain operated, left or right hand operation. Operating effort: Class 1. Testing: Class 2. Mechanism endurance: 5000 cycles. Execution: Installing blinds.. Bottom bar material/ Colour: Maximum weight: 3 kg. Barrel diameter: 41 mm. Barrel: Anodized aluminium. Material: Steel with plastic bracket covers. Size: 46 x 43 mm. Material: Stainless steel. Fire performance. Rating: B-s 1 d0 (EN 13501-1), complete all as per Architect's specification N20/240					
	To suit ope sizes: (all to be measured on site and confirm final dimensions)					
B	Type WF - Window size to suit structural ope 1360mm wide x 2260mm high	4	No			
C	Type WG - Window size to suit structural ope 6310mm wide x 2240mm high	1	No			
D	Type WH - Window size to suit structural ope 1360mm wide x 2810mm high	1	No

SITE DEVELOPMENT WORKS

DOMESTIC VIOLENCE REFUGE (DVR)

					€	c
	(10) PREPARED SITE - DVR					
	INFORMATION					
A	This element of the work has been measured from Architects Drawing No 103 & 105 together with Engineers Drawings No's DR-C-0401, DR-C-0100 and Geodata Drawing20485-100 and Service's Engineer's Drawing M22 & E29		Note			
B	The Architects and Engineers Drawings and Specifications are all complementary to each other and should be read in conjunction with one another.		Note			
C	The Contractor is advised that the Works Requirements and Pricing Documents are all complementary to each other and should be read in conjunction with one another.		Note			
D	For detailed description of workmanship and materials refer to Specifications.		Note			
E	Allow for probing the sub-strata prior to excavation to ascertain the exact nature of the sub-strata.		Item			
F	Rock is defined as any materials met with in excavation which is of such size or position that it can only be removed by means of wedges, special plant or explosives.		Note			
G	The Contractor is advised that all works within the Exclusion Zones around retained existing Trees on site must be done by hand. No mechanical digging etc. is permitted within these zones. Contractor is to include here for any additional costs carring out any of the works listed below within the Exclusion Zones. Existing retained trees are indicated on Architect's Drawings 103 & 105		Item			
	Vibration Monitoring					
H	Contractors are to allow for all vibration monitoring of adjoining properties and adjoining site boundary walls during demolition and piling works and are to allow here or elsewhere within their tender all all costs associated wiht same all in strict accordance with Engineers Specification		Item			
	<u>Carefully demolish, remove off site to an approved licensed tip the following:</u>					
J	Concrete footpaths, including sub-base under, overall 300mm thick	1,132	m2			

					€	c
A	Concrete steps to low level garden to rear of convent building, including sub-base under, overall 300mm thick, also including side walls to same, etc complete, overall 3,200mm x 3,000mm on plan	1	No			
B	Tarmacadam roadway/carpark areas including sub-base under; overall 450mm thick	330	m2			
C	Heavy duty PC Concrete kerbs/sub-base under (roads)	72	m			
D	Saw cut existing tarmacadam (in 2 No locations)	10	m			
E	Ditto concrete footpaths (in 2 No locations)	5	m			
	Ditto Works outside boundary of site, to public footpaths, & road etc. to Evergreen Street. Include for all necessary, traffic management, temporary sigange, walkways, lighting etc. complete.					
F	Concrete public footpaths, including sub-base under, overall 300mm thick	33	m2			
G	Tarmacadam public roadway areas including sub-base under; overall 450mm thick	83	m2			
H	Saw cut existing tarmacadam	46	m			
J	Ditto concrete footpaths (in 2 No locations)	6	m			
K	Extra over of carefully taking up and reinstating after existing manhole covers. Include for all necessary manhole adjustments, blockwork, etc. for new road / path level	4	No			
L	Ditto Road Gullys	2	No			
M	Ditto Public Road Signage	2	No			
N	Ditto Stopcock Access ChamberCover	2	No			
P	Allow for removal of existing thermoplastic line markings by thermal lancing to facilitate site entrance sight lines	78	m			
Q	Ditto last, disabled parking emblem	1	no			
	<u>Hack up and remove the following;</u>					
R	Abandoned foul and surface water drainage runs and all as indicated on Architect's and engineer's drawings	1	Item			
S	Ditto; watermain and fittings	1	Item			
				To Collection €		

					€	c
A	Ditto; Gasmain and fittings (refer to Service's Engineer's Drawing M22). Contractor to include for liaising with Board Gais before removal of underground gas pipe from site.	1	Item			
	Manholes including cast iron covers and frames; depth;					
B	1.00m - 2.00m	32	No			
C	SV / Hydrant chambers and covers	4	No			
D	Road gully, including cast iron grating and frame	7	No			
E	150mm x 150mm gully traps	25	No			
F	300 x 300mm AJ including riser and frame	5	No			
	Demolitions.					
	<u>Carefully take down, entirely demolish and remove all debris off site to an approved recycling facility the following:</u>					
G	Contractors attention is drawn to aspects of the demolition work in this contract with represent a Medium to High Risk with respect to the Safety, Health and Welfare at Work (Construction) (Amendment) Regulations 2013.		Note			
H	The following consists mainly demolition of attached/ isolated structures, together with removal of existing floor slabs, grubbing up all foundations, disconnection of all services as described etc. Before commencement of these works, the Contractor must submit to the Employers Representative/Engineer for their approval, a Method Statement detailing the sequence/phasing of the works including commencement date and duration of the works. Tendering contracts will be deemed to have included in their rates for all works deemed necessary in carrying out each work item to the entire satisfaction of the Employers Representative/Engineer.		Note			
J	Carefully demolish existing isolated single storey structure, size overall 6.50m x 5.00m x 7.70m high, composed of having slate hip canopy roof; with concrete block masonry walls, to 1 side and part of other 2 sides, include for hacking up floor slab and hardcore sub-base under, rising walls, grubbing up and sealing off of exposed drainage etc., and all as per Drawing 20485-100	1	No			
K	Ditto Timber garden shed, 2.50m x 3.00m x 3.00m high, complete	1	No			
L	Ditto Monument / Grotto within Lower level garden to rear of Convent Building, approx 2.00m high	1	No			
				To Collection €		

					€	c
A	Galvanized steel tubular gate, overall 3.00m wide x 2.10m high	1	No			
B	Concrete masonary piers to ditto approx 500mm x 500mm x 2,500mm high, including grubbing up foundations to same.	2	No			
C	Part of existing 215mm thick Concrete masonary boundary wall and attached pier, approx 2,200mm high, including for all necessay saw cutting, grubbing up foundations and reinstement of existing remaining boundary wall after demolition of short section of wall.	3	m			
D	Part of existing 500mm thick rendered masonary wall to Sunken Garden, approx 1,500mm high, including for all necessay saw cutting, grubbing up foundations and reinstement of existing remaining garden wall after demolition of short section of wall.	6	m			
E	Part of existing 250mm thick rendered masonary wall to Sunken Garden, approx 2,000mm high, including for all necessay saw cutting, grubbing up foundations and reinstement of existing remaining garden wall after demolition of short section of wall.	15	m			
F	Wire fence within hedgegrow, including postes etc complete, approx 2,000mm high	10	m			
G	Decommission, strip out and disposal off site of existing PVC Oil Storage Tank. Include for all necessary emptying of oil tank of all its, contents. Include also for breaking up and disposing concrete base to tank, and grubbing up oil feed pipe to existing convent building. complete. Approx Tank Size; 2,0m diameter x 3.0m high	1	No			
H	Timber ESB Poles, after desconnection of power by ESB	2	No			
J	Contractor to review location of site compound and where power supply will be fed from. Pole indicated on Service Engineer's Drawing E29 could be retained or moved to the edge of the site for contractor's connection and removed on completion of the project.		Item			
	<u>Excavation and Earthwork: Excavation</u>					
	<u>Starting Levels</u>					
K	The starting level for excavation measurement is the existing ground level.		Note			
				To Collection €		

					€	c
	Excavation					
	Removing, including roots and backfilling after in suitable excavated material.					
	Trees					
A	<0.45m girth	3	No			
B	0.45-1.5m girth	4	No			
C	Tree stumps, including roots	5	No			
	Hedges					
D	Generally	224	m			
	Site vegetation					
E	Generally	4,798	m2			
F	Extra over within sunken garden area to rear of Convent Building	485	m2			
	Excavation					
	Topsoil					
G	Average depth 300mm	4,798	m2			
H	Extra over within sunken garden area to rear of Convent Building	485	m2			
	Reduce levels					
J	Depth < or = 2.00m	2,290	m3			
	Extra on excavation items for:					
K	Excavating around existing services, parallel / next / alongside excavations	20	m			
L	Excavating around existing services, crossing excavations; ESB	5	No			
M	Excavating around existing services, crossing excavations; Eircom	5	No			
N	Excavating around existing services, crossing excavations; Watermain	5	No			
P	Excavating around existing services, crossing excavations; GAS	5	No			

To Collection €

					€	c
A	Excavating around existing services, crossing excavations; Foul	5	No			
B	Excavating around existing services, crossing excavations; Surface	5	No			
C	Next to existing Stone Boundary Walls; Include for all necessary temporary props etc.	39	m2			
D	Next to existing Masonary Boundary Walls; Include for all necessary temporary props etc.	89	m2			
E	Next to existing Steel Boundary Fence; Include for all necessary temporary props etc.	33	m2			
F	Next to existing Boundary Railing (approx. 2m deep excavtion); Include for all necessary temporary props etc.	22	m2			
G	Next to existing Neighbouring Residential Building (approx. 2m deep excavtion); Include for all necessary temporary props etc.	36	m2			
H	Next to existing Neighbouring School Building (approx. 2m deep excavtion); Include for all necessary temporary props etc.	46	m2			
	<u>Disposal</u>					
	Water					
J	Surface Water		Item			
K	Ground water		Item			
	Topsoil					
L	Topsoil kept on site; for later re-use (Landscaping)	94	m3			
M	Off site to a tip to be provided by the Contractor	1,346	m3			
	Excavated material; Unsuitable					
N	Off site to a tip to be provided by the Contractor	2,290	m3			
				To Collection €		

					€	c
	DISPOSAL OF EXCAVATED MATERIALS					
A	'Contractor to allow for additional waste classification testing for all soils to be removed off site. 8 No. composite samples to be recovered following mobilisation and waste classification testing to be undertaken on each sample by a UKAS or INAB accredited laboratory. Each sample to be tested to firstly determine if there are any hazardous properties present as required under the Waste Framework Directive. The locations and depths for these samples are to be co-ordinated with PUNCH Consulting Engineers. There are 2 results available: Hazardous Non- (not) hazardous		Item			
B	This is to be determined by assessing the total pollutant content via the HazWasteOnline reporting software. Further to this, Waste Acceptance Criteria (WAC) testing is to be undertaken on each sample to determine how the waste will behave once its buried in a landfill. This is to be carried out primarily through analysis of leachate derived from that waste during laboratory analysis. There are 3 results available: Inert Non-hazardous Hazardous		Item			
C	These should be determined by comparing the leachate results to the Waste Acceptance Criteria for landfilling of waste. Prior to removal of all soil material from the site, the contractor is to ensure that the Waste Receiver is appropriately licenced to receive the material. This should involve obtaining a letter of acceptance from the Waste Receiver. The contractor should allow a 2 week period in their programme for detailed soil classification testing prior to any bulk removal of soil from the site. The contractor should also allow for the segregation of soil waste into different categories (i.e. inert/non-hazardous/hazardous) in accordance with the quantities provided in their tender		Item			
	Disposal Excavated Material; Unsuitable; Off site as per above described and extra over provisions contained in the main pricing document					
	Extra Over on bulk excavations for:					
D	Bulk dig inert soil; waste code 17 05 04	2,898	m3			
E	Non-hazardous soil; waste code 17 05 04	492	m3			

To Collection €

					€	c
A	Hazardous soils; waste code 17 05 03	123	m3			
B	Construction waste and demolition waste; waste code 17 01 07	123	m3			
	Extra Over on general excavations for:					
C	General excavations dig inert soil; waste code 17 05 04	2,593	m3			
D	Non-hazardous soil; waste code 17 05 04	415	m3			
E	Hazardous soils; waste code 17 05 03	104	m3			
F	Construction waste and demolition waste; waste code 17 01 07	104	m3			
	Imported Filling;					
	Filling; sub base; selected graded gravel material per engineers specification, spread, levelled and compacted in 200mm thick layers on ground; in making up levels in separate layers; The contractor should note that all fill below floors shall require certification that it is fit for purpose, average thickness					
	Filling					
	To make up levels under buildings					
G	Granular Fill in accordance with SR21 Annex E. 2. >250mm	241	m3			
	Imported material; selected granular fill to Class 6C of table 6/1 of the TII specification for roadworks; compacting in 225mm thick layers					
	To make up levels under roads / paths					
H	Average thickness > 0.25m	1,972	m3			
	Testing, Surveys, Samples & Warranties					
	Include for all testing, surveys, samples & warranty requirements as set out in the Architects works requirements					
J	Testing		Item			
K	Surveys		Item			
L	Samples		Item

				To Collection €	

					€	c
	Filling;					
	Imported Material					
	Filling; sub base; selected graded gravel material per engineers specification, spread, levelled and compacted in 200mm thick layers on ground; in making up levels in separate layers; The contractor should note that all fill below floors shall require certification that it is fit for purpose, average thickness					
	Filling					
	To make up levels					
A	Granular Fill in accordance with SR21 Annex E. 2. >250mm	9	m3			
B	"Annex E of SR21" Backfill to foundation; >250mm	20	m3			
	Surface Treatments					
C	60mm thick sand/non-angular granular material blinding laid on barrier	28	m2			
	CONCRETE WORK: In-Situ Concrete					
	Concrete Cube Tests					
	Form and test concrete cubes in accordance with the Works Requirements and Structural Engineers specification					
D	generally		Item			
	Blinding					
	In-situ concrete; designed concrete mix to IS EN 206-1; compressive strength class C16/20; maximum aggregate size 20mm; exposure classes XC4; reinforced and vibrated; all in accordance with the Works Requirements and the Structural Engineers particular specification for concrete					
	Blinding					
E	Trench fill under strip foundations to good bearing strata	69	m3			
	In-situ concrete; designed concrete mix to IS EN 206-1; compressive strength class C32/40; reinforced and vibrated; all in accordance with the Works Requirements and the Structural Engineers specification for concrete					
F	Foundations (Strip); Poured against formwork sides and on earth or unblinded hardcore; Reinforced	14	m3			

To Collection €

					€	c
A	Beds (Floor Slab); >150mm thick; reinforced; laid on DPM on blinded hardcore	7	m3			
	In-situ concrete; designed concrete mix to IS EN 206-1 and BS 8500-2.; compressive strength class C30/37; maximum aggregate size 20mm; exposure classes XC1; poured into cavity between blockwork leaves and vibrated; all in accordance with the Works Requirements and the Structural Engineers specification 132 for concrete and Architects specification F30/110					
B	Cavity infill; >150mm	3	m3			
	CONCRETE WORK: Sundries					
	Isolation Joints (IJ)					
	Perimeter of concrete slab isolation joint; underslab insulation; type: agrement certified for use under ground bearing slabs; Thickness 20 mm; Compressive strength (minimum) 140 kPa at 10% compression; Thermal conductivity (maximum) 0.022 W/(mK);30mm thickal to Architects specification clause E20/215; form 20 x 12mm surface groove in in-situ concrete floor slab, to be filled with two part polysulphide seal; forming joint between floor and wall all in accordance with the Works Requirements and Architects specification clause E20/215					
C	Verticle; Depth 150-300mm	41	m			
	Surface finishes					
	Powerfloating					
D	To falls & Cross falls	28	m2			
	CONCRETE WORK: Reinforcement					
	Steel fabric reinforcement to BS 4483; Strength grade: B500A; fixing with tying wire and supporting on metal chairs in strict accordance with the manufacturers instructions but at the contractors discretion; all in accordance with the Engineers specification E30					
	Fabric					
	Reference A393; 6.16 kg/m2; 400mm laps between all adjoining sheets to Engineers specification					
E	Horizontal; Strip Foundations	46	m2			

To Collection €

					€	c
	Reference A393; 3.95 kg/m2; 400mm laps between all adjoining sheets to Engineers specification					
A	Horizontal; Suspended Floor Slab	28	m2			
	CONCRETE WORK: Formwork					
	Formwork - Wrot Formwork; all in accordance with the Works Requirements and Structural Engineers specification					
	Sides of Foundations					
B	Height 300mm - 500mm	76	m			
	Edges of beds					
	Height < or = 250mm					
C	generally	7	m			
	BRICKWORK AND BLOCKWORK: Blockwork					
	Rising Walls					
	Concrete blocks to I.S.20; to I.S. 325 and EN 771-3; compressive strength 13.5N/mm2; 440 x 100 x 215mm nominal size; in mortar 1:1:5 or 6 mixture of Cem 1; strenght class M4 to BS EN 998-2; laid in half lap stretcher bondwith neat flush pointing as the work proceeds; all as per Architects Specification F 10 355 and Engineers Specification 355A					
D	100mm thick	9	m2			
E	215mm thick	13	m2			
F	440mm thick	14	m2			
	Labours					
	On blockwork					
G	generally		item			

To Collection €

				€	c
	Forming cavities				
	Full fill cavity insulation to external cavity wall; 100mm wide cavity; WALL TIES: Double triangle type or other equal or equivalent stainless steel wall ties complying with IS EN 845-1:2013 at 450mm centres vertically and 450mm centres horizontally; include for keeping cavity clear of mortar droppings, all in accordance with the Works Requirements and in particular Structural Engineers particluar specification for blockwork and Architects specification clause F30/150A				
	Between new walls				
A	100mm wide	9	m2		
	Radon Barrier				
	Waterproofing/ damp-proofing/ gas-retardant membrane Under slab. To IS EN 15814 + Agrement-certified. Number of layers: As per manufacturers guidelines. Thickness/ gauge: As per manufacturers guidelines. Bonding: Horizontal surfaces loose-laid; vertical surfaces spot-bonded with adhesive. Surfaces to be joined: Clean and dry beyond the full width of the joint. Laps (minimum): Side and end laps, 300 mm with double row tapes - unless otherwise specificed by manufacturer guidelines and Agrement certificate. Sealing: As per manufacturers guidelines and Agrement certificate. Properties: Tensile strength: >600N/50mm. Tear Resistance: >425N. Elongation: <19%. Moisture Vapour Transmission: <0.2 g/m2/day. Water Vapour Resistance: >1024MNsg-1. Radon Gas Transmittance: 17x10-9 m/s-1. Radon Gas Permeability: 7 x 10-12 m2/s. All in accordance with the Works Requirements and Architects specification clause J40/297/A; Seal at joints to architects specification with 150mm laps with adhesive recommended by manufacturer sealed at joints with in accordance with the manufacturer's written instructions				
	Radon Barrier				
	Width > 300mm				
B	Horizontal	39	m2		
	Width < 300mm				
C	Vertical (sealed to face of existing building per Architect's detail 02/300	25	m		

To Collection €

				€	c
	DPC / Cavity Trays				
	Gas resistant DPCs / Cavity tray; Product to have Agrement Certification, and to meet the following performance characteristics; Material Type: Virgin blend LDPE; Thickness: 500 microns; Radon Permeability: 7.9 x 10-12 m2/ s; Tensile strength >350N/50mm; Weight: 460 g/m2; Tear Resistance >200N; MVTR : <0.3 g/m2/day; all in accordance with the Works Requirements and Architects specification clause J40/140A; Seal at joints to architects specification F30 /360A with 150mm laps fully bonded with adhesive recommended by dpc manufacturer and sealed at joints with in accordance with the manufacturer's written instructions				
A	Width < or = 225mm; horizontal	38	m		
B	Width >225mm; To base of blockwork cavity and dressed up, over and down 225mm high blockwork as per architects drawing 337/E/001 ref Radon DPC (1) (overall girth approx.1025mm); fully bonded and sealed to horizontal radon barrier all as before described	12	m2		
C	Extra over for sealed tape in fixing to blockwork	25	m		
	"Monarflex radon resisting membrane RMB 400" top hat units with clips; fully bonded and sealed at joints in accordance with the manufacturer's printed instructions				
	Collars around pipes, standards and the like				
	Diameter				
D	< or = 110mm	3	No		
	Non perforated gas collection pipes; Manufacturer:Contractor to submit proposals; Product to have Agrement Certification, for proposed purpose.; Material: High-density polyethylene (HDPE), non perforated with ring seals joints to BS EN 681-1; Outside diameter size: 110 mm. all in accordance with the Works Requirements and Architects specification clause J21/110 & 340 and installed as per J21/660				
	Pipes				
	110mm diameter				
E	In trenches (Provisional)	10	m		
	Extra over pipes on which they occur for				
F	Bends; 87.5 degrees	2	nr		

To Collection €

					€	c
A	Radon duct capping detail; at surface paving level; Material: Unplasticized polyvinyl chloride; Cover Assembly Dimensions: 146mm x 166mm	2	nr			
	Plastic Depressurisation sumps; Manufacturer: Contractor to submit proposals; Product to have Agrement Certification, and must fulfill the following performance requirements: Material: Medium Density Polyethylene.; Diameter of the open base: 283.5 mm; Overall Depth: 149 mm; Short Term Creep Test: Mean deflection at 480N is 6.96mm; Compression Test Result: Mean deflection at 10,260N = 27.33mm; Ground level Termination: System capping detail, at surface paving level; Material: Unplasticized polyvinyl chloride; Cover Assembly Dimensions: 146mm x 166mm; all in accordance with the Works Requirements and Architects specification clause J21/110 & 370A and installed as per J21/635A					
	Chambers					
B	Sump & Sump Cap-Link	1	nr			
	Drainage Channels					
	Drainage channel system with 100mm wide grating; Product to conform to the following performance criteria: CE marked and fully certified to Load Class B125 per BS EN 1433:2002; Channel drain system with stainless steel edge rail.; Fall Constant invert; Overall Depth: 100mm; Grating: Ductile iron with high heel protection; Loading grade to BS EN 124: Load class B125; Other requirements: Including all accessories as required per manufacturer's best practice installation - sumps, end caps etc. bedded in haunched concrete overal size 170 x 150mm high including all nessessary formork; all in accordance with the manufacturers instructions and Architects specification and architects drawing					
	Including all drain unions, ends, outlets etc.					
C	overall length 1150mm	1	nr			
D	overall length 2000mm	1	nr			

To Collection €

				€	c
	EXTERNAL & INTERNAL WALLS				
	Precast Concrete				
	Precast concrete units; Contractors choice to submit for approval; Components manufacturer's 'proprietary' concrete; to B.S. 8500-2; building into existing masonary walls, ainclude for all necessary reinstatement, bedding in gauged mortar (1:1:6); as per Engineers specification and Architects detail 02 & 05 in drawings 314 and specification				
	Cills smooth finish; 180mm deep x 80mm high, lengths as per window / door opes with each side to be stepped into reveal; Include for wrapping with all necessary polyethene DPC damp proof courses and / or cavity trays to BS6515. Include for all neccesary insulation, concrete backing etc complete, all as per Architects drawings & specification				
A	Door Threhold 1,300mm wide	3	No		
B	Door Threhold 2,050mm wide	1	No		
	Prestressed Concrete Lintels bedded in approved sand cement mortar; all in accordance with Architects Specification & Engineers Specification				
	Include for all temporary propping until blockwork over is mature in accordance with the manufacturers instructions				
C	(L4) 215 x 215mm	10	m		
	Prestressed Concrete Parapet Capping bedded in approved sand cement mortar; include for DPC etc complete, all in accordance with Architects Specification & Engineers Specification. Size				
D	480mm wide x max 140mm high, all per Architect's drawing 909	30	m		
E	Ends	1	No		
F	Mitres / Corners	4	No		

To Collection €

				€	c
	PREFABRICATED STEEL LINTELS:				
	Prefabricated Steel Lintels, to IS EN 845-2. Galvanised Steel. Bed on mortar used for adjacent work with bearing of not less than 150 mm unless specified otherwise. - To be installed in accordance with manufacturers recommendations. Deflection limits, Combined: L/200. Live only: L/360. Refer to Structural GAs for lintel sizes. S/K and HD/K refer to Keystone lintels similar and approved can be submitted. Refer to architectural drawings for U-value requirements. Apex lintel: STXAP/K-150 Stepped apex lintel 35degree pitch, 350mm wall, 450mm step, no wire. Heavy Duty Steel Lintel with Steel plate bottom. All per Engineer's Drawings & Specification and Architect's Drawing and Spectfication				
	Lintels to suit cavity wall construction (consisting of 100mm outer leaf, 100mm cavity and 215mm inner leaf)				
A	Proprietary masonary support / relieving angle suitable for 100mm cavity (4location)	8	m		
	BLOCKWORK & BRICKWORK				
	Brickwork				
	Clay facing brickwork Type A - 'White Brick'. Handmade, fired clay, facing brick with sanded finish. Vandersanden or equivalent, Lima 124A0 or equivalent bricks: to IS EN 771-1. Bricks to be cut on site as required to site brickwork setting out on architectural drawings. Mortar: Lime mortar as section Z21 to IS EN 998-2. Mix: Moderately hydraulic HLM3.5. Bond: Half lap stretcher, Joints Flush. All per Architect's Specification F10-110A				
	Walls				
B	100mm thick	90	m2		
	Labour on Brickwork				
C	Generally		Item		
	Blockwork				
	Concrete blocks; to be category 1 group 1 and to EN 772-1; compressive strength 13.5 N/Sqmm; 440 x 215 x 100mm nominal size; in mortar (1:1:6) min. strength M4; laid stretcher bond; all as per Architects and Engineers Specification				
	Inner Leaf of External Walls, Fair faced pointed finish to inner face				
D	225mm thick	90	m2		
				To Collection €	

					€	c
	Internal Walls Fair faced pointed finish to both faces					
A	225mm thick	21	m2			
	Bedjoint Reinforcement					
	Provide 3 courses of GBF 35 W60 SC brickforce (or equivalent) reinforcing to horizontal bed joints directly above ope. Extend minimum 750 beyond ope size, all per Engineer's Specification, to;					
B	100mm brickwork	12	m			
	Weep Holes					
	Supply and fit Perpend joint plastics weep holes; Beak weep with reduced front section (beak shaped), transparent, all per Architect's specification and drawings					
C	Fitted through outer leaf immediately above base of cavity, at cavity trays, stepped dpcs, and external openings. 75 mm above top of concrete fill at base of cavity. Spacing (maximum): At not greater than 900 mm centres and not less than two over each opening.	30	m			
	Forming cavities; All Caviity Walls to be tied using suitable S/S wall ties. Ties shall be bedded into the bed joint of brick leaf by not less than 50mm, and shall be spaced in accordance with BS EN 845: Part 1, BS EN 1996 and BS 8000: Part 3. Additional ties shall be provided to sides of openings in accordance with BS EN 1996, as per Engineers & Architect's drawings and Specifications					
	Forming cavities; between new Blockwork Inner Leaf and Brickwork Outer leaf					
D	100mm wide	90	m2			
	Cavity Closer					
	Propritary Cavity Closer to head and reveals of door ope, complete all in accordance with Manufacturer's Recommendations and all per Architect's Drawings & Specification.					
E	To 100mm wide Cavity, with blockwork inner leaf, brick outer leaf	24	m			

To Collection €

				€	c
	Copolymer thermoplastic DPC damp proof courses and / or cavity trays, all per Architects specifications F30				
	Girth > 300mm				
A	Horizontal	20	m2		
	Girth < 300mm				
B	Vertical	19	m		
	FLOOR, WALL AND CEILING FINISHINGS: In-Situ Finishings				
	Plaster; scud in cement and sand (1:3); render in cement, lime and sand (1:1:6) with waterproofer added; finish in cement, lime and sand (1:2:9); dry dash plaster finish; 25mm thick overall				
	To blockwork base; 25mm thick; to walls and piers; generally				
C	> 300mm	9	m2		
	PAINTING AND DECORATING: Painting				
	Masonry Paint to rendered blockwork in three different colours, all as before and in the chosen colour; all in strict accordance with Architects Specification Clause M60				
	To walls; dry dash plaster base				
D	> 300mm wide	9	m2		
	To walls; Pointed Blockwork				
E	> 300mm wide	91	m2		
F	< 300mm wide	30	m		
	Wire Mesh				
	Supply and fix wire mesh frame for climbing plants. approx 2.25m high. fixed to face of brick wall, all per Architect's drawing 909 and Specification Q31/216				
G	Suitable stainless steel wire trellis in pattern indicated on drawings (Architectural 908 and 909)	53	m2		
				To Collection €	

				€	c
	ROOF				
	Reinforced concrete grade C32/40; filling into formwork; tamped around reinforcement all as per Engineers concrete specification:				
	Roof Slab				
A	225mm thick	8	m3		
	Non structural concrete screed laid on concrete roof deck. Include for praparing existing deck to recieve new screed; grade C32/40; laid to falls and crossfalls; as per the Engineers Drawings and Specification and Architect's Specification M10/670				
B	floating screed; average depth 75mm thick with a minimum depth of 50mm and maximum of 100mm as per Architects Drawings	3	m3		
	Reinforcement				
	Bar reinforcement; all in compliance with Engineers Concrete Specification Section E30; must be free of loose millscale and thoroughly cleaned to remove all loose rust, oil, grease or other harmful matter prior to being placed in position with and including all necessary laps, spacers, chairs and tying wire; all in strict accordance with the Engineers drawings and Specification				
	Mesh				
C	A393 Mesh	68	m2		
	Formwork				
	Wrot formwork as described to Engineer's specification to : -				
	Soffit of Roof Slab				
D	> 300mm wide	29	m2		
	Sides of Roof Slab				
E	< 300 mm wide	26	m		
	Surface Finishes				
F	Float concrete finish to Roof Slab	34	m2		
G	Float concrete finish to screed to falls	29	m2		

To Collection €

					€	c
	Built-up reinforced bitumen membrane cold deck roof covering Waterproof covering; Underlayer: Bauder G4E, OR equivalent, 4 mm thick, 200g/m2 glass-fibre reinforced, elastomeric torch-applied bitumen underlayer. Attachment: As clauses 710, 740. Top layer/ capsheet: Bauder K5K or equivalent 5 mm thick, 250g/m2 polyester reinforced, elastomeric bitumen torch applied capping sheet. Colour: Charcoal grey finish. Attachment: As clauses 710, 750. Flashings and detail work: Additional layer of SBS-modified bitumen membrane, mineral-surfaced. Fire Classification: Roof buildup is required to achieve BroofT4 - provide test certificates to match specific buildup. Include for all necessary Surface protection. Include also for all necessary accessories: Angle fillets, as clause 335, Perimeter trims, as clause 345, Pipe collars, as clause 480. Etc. Overall roof build up to achieve BROOF(t4), in accordance with BS EN 13501-5. Allow for to achieve falls as per architectural drawings. All in accordance with Architects Drawings and Specification Section J41/130 & 430 Laid to falls and cross falls on Concrete deck (elsewhere measured)					
A	> 300mm wide	29	m2			
B	Vertical upstands to parapet compliance with Part L of the current Building Regulations. Include for support brackets, roof fininish to extend in under parapet coping (elsewhere measured) etc. complete, all as per Architect;s Drawing 909	25	m			
C	Form Gutter 350mm wide	9	m			
D	Form watertight Rainwater outlets through reinforced concrete deck. Include for all necessary flashings , expanding foam, sealing, bends with roding eye, etc complete all per Architect's Drawing	1	no.			
E	Form watertight Rainwater outlets through 440mm wide cavity parapet wall with brick outer leaf. Include for all necessary flashings , expanding foam, sealing, bends with roding eye, etc complete all per Architect's Drawing	1	no.			
	Air and Vapour control layer to Architect's spec. J41/395					
F	> 300mm wide	29	m2			

To Collection €

					€	c
	Stone Ballast					
	Supply and fit Pebble Stone ballast. Rounded river washed pebbles. Size: 5-30mm. Depth:: minimum 50mm. Colour: white/silver grey. All per Architect's Drawing 909 and SpecificationJ41/460					
A	70mm deep	29	m2			
	Drainage					
	PVC-U pipework internal pipework and fittings, to ISEN 1329-1 or BS 4514, Kitemark-certified. Nominal size: DN110. Brackets: PVC-U clips, black. Fixings: Stainless steel screws. including all required fittings, bends, branches and accessories; brought down within building; all as per Architects drawings and Specification					
B	Downpipe 110mm Diameter	3	m			
C	Extra; bends	2	no			
D	Flat roof outlet to be Anti Vortex cast aluminium c/w metal clamping ring and leaf grate with flange recessed in insulation, inclusive of forming and sealing ope in flat roof inclusive of all required fixings and sealing; all as per Architect's drawings and Specification section R10	1	no			
	Builders Work					
	The Contractor is to allow for all Builders Work Requirements in respect of the rainwater downpipes inclusive of all cutting, forming holes and the like; all as per Architect's Drawings and Specification.					
E	builders work;		Item			
	Electronic Roof Integrity Test to all Roof Areas					
F	Electronic roof integrity test; all as per Architect's Drawings and Specification Section J41/920		Item			
				To Collection €

	Metal Doorsets Plant Room Highly insulated aluminium doorset for plant rooms. Outward swinging double doors. Fire resistance: EI60Sa in accordance with IS EN 13501-2. Fire performance. Fire resistance: EI60. Smoke leakage: Sa. Reaction to fire: To BS EN 13501-1, Class B-s3, d2 or better. Acoustic performance: Rw (C;Ctr) = 33 (-2;-5) dB - 36 (0;-2) dB.. Thermal performance (U-value maximum): 1.6 W/m2K. Security (Intruder resistance): RC2/ WK2 to European standard EN(V)1627-EN(V)1630. Watertightness: Up to 600 Pa (class 3). Air permeability: Up to 300 Pa (class 7A). Resistance to wind load: Up to 800 Pa (class C2). Door leaf. Material: Anodized Aluminium - to match finish as clause L10/410. Type: Flush panel. Frame. Material: Anodized Aluminium - to match finish as clause L10/410. Threshold: Flat aluminium with brush seal. Ironmongery: Handles: Shield handles, natural anodized. Access control: Mortice lock with key and thumb-turn internally. Heavy duty hinges. Perimeter seals: Fire and smoke seal + EPDM weatherseal. Other requirements: Flush threshold drain with lapping DPC/EPDM on exterior side connected to surface water drainage network. Fixing: As per manufacturer's guidelines. Warranty: Ten year. Verification. Submittals etc. complete: Include for Airtight Seals/ Tape and foam as per Specification and as shown on drawings. Include also for all Mastic Pointing, EPDM, mineral wool packer, to perimeter of frames. Include for all necessary fixings to existing masonary wall. Include for all associated ironmongery and opening sections. All as per Architects plans, elevations and Door schedules [dwg 606 and as per Architects specification clauses L20A specifically L20A/485; and all in accordance with the manufacturers instructions. Composite External Doorset					
A	Type DK- Single Doorset size overall 1300mm wide x 2250mm high	3	nr			
B	Type DL- Double Doorset size overall 2030mm wide x 2250mm high	1	nr

	PAINTING AND DECORATING: Painting				
	Masonry Paint to rendered blockwork in three different colours, all as before and in the chosen colour; all in strict accordance with Architects Specification Clause M60				
	To walls; dry dash plaster base				
A	> 300mm wide	29	m2		
B	< 300mm wide	5	m		
	To Concrete Coping				
C	> 300mm girth	7	m2		
	GATES				
	External gates; shall be fabricated from mild steel hot dip galvanised after fabrication with welds ground smooth, including all necessary site welding; shot blast clean steel members and apply Blast Primer to a dry film thickness of 20 microns and Holding Primer to a dry film thickness of 50 microns at works. Include also for powder coat finish to selected colour; include for all as indicated on Architects plans, elevations and as per Architects Specifications and to match railings				
	Single gate - composed of 60 x 40 x 3mm framing to four sides, infill with 2 no. 40 x 40mm RSA horizontal mid-rails, and 40 x 10mm solid vertical Flats at 95mm centres; hinges galvanised mild steel hinge lug shaped as shown on plan and welded to gate framing. Hole for hinge. 2 no. lockable latchs, 2no 6mm flat plate, push plate welded in-between flat uprights. 10mm dia. hole through catch and back plate for padlock. 2no drop bolts, fixed to box framing, include for all necessay latches, hinge spigots fixed to rendered masonary wall, brackets, catches, all to have powder coat finish, etc. complete, all as per Architects Drawing 356 and specification; size				
D	Overall 1,200mm wide x 2,200mm high	1	No		

					€	c
	External Clothes Drying Racks					
	Supply and fix External Clothes Drying Racks to Drying Area to East of DVR. Provide 4 no. racks - with 2 tiers each. Wall fixed. Material: Galvanised and powdercoated steel Include for reinforced Concrete foundations to posts, including all necessary fixings, brackets, etc complete all as per Architect's drawing 909 and Specification Q50/330. Size;					
A	2 tier rack, 1,000mm long x 550mm deep	4	No			
	PERGOLA					
	Supply and fix Pergola; Bespoke joinery item, Contractor design item to confirm framing sizes with Solid Iroko Frame, supported on suitable Stainless steel support. Include for reinforced Concrete pad foundations to posts, including all necessary excavation, concrete, mesh reinforcement, and imported hardcore backfill. Verification: Submittals: Provide calculations and Shop Drawings. Provide sample of timber - min 600mm x 150mm. Include for finish: Clear sealer for weathering, all necessary fixings, brackets, reinforced concrete footings, etc complete all as per Architect's drawing and Specification Q40/200. Overall Size;					
B	14,000mm long x 3,500mmwide x 3,640mm high	1	No			
	Testing, Surveys, Samples & Warranties					
	Include for all testing, surveys, samples & warranty requirements as set out in the Architects works requirements

(20) SITE STRUCTURES - DVR Carried to Summary					

					€	c
	(30) SITE ENCLOSURES - DVR					
A	This element of the work has been measured from Architects Drawing No. and Engineers Drawing No.		Note			
B	The Architects and Engineers drawings and specifications are all complementry to each other and should be read in conjunction with one another.		Note			
C	For detailed description of workmanship and materials see specification.		Note			
D	The tenderers should examine the Architects and Engineers drawings and specifications and satisfy themselves as to the nature and extent of the works outlined below and should include for all costs in connection with same		Note			
	WORKS TO EXISTING BOUNDARY WALLS					
	Builders Work to Boundary Wall					
	Clearing					
E	Contractors to carefully clean off and remove all existing vegetation growth from existing rubble stone boundary wall to the North Boundary. (Approx 130m long). Include for disposing all removed vegetation growth off site.	1	Item			
F	Ditto to Renderd Stone wall to Sunken Garden to back of Convent (Approx 65m long)	1	Item			
G	Ditto to Masonary boundary walls to West and South (Approx 170m long). Clean face of blockwork wall and capping and leave ready for new decoration (elsewhere measured)	1	Item			
H	Contractor should carry out full visual survey of all existing Boundary & Garden walls when vegetation is cleared, Drawings to be provided by contractor to Design Team for comment.	1	Item			
	Repair Works to Existing Sunken Garden Wall					
J	Carefully Hack off existing plaster / render off existing garden wall and repoint where neccessary. to existing sunken garden to rear of convent. Following the removal of render and the carrying out of any necessary masonry repairs and raking and repointing of existing masonary walls. Leave face of wall ready to recieve new plaster / render (elsewhere measured), Include for all necessary saw cutting etc. complete, all per Conservation Architect's specification section 3.17 & 4.5	260	m2			
K	Ditto concrete capping to garden wall	65	m

	GATES <u>External gates; shall be fabricated from mild steel hot dip galvanised after fabrication with welds ground smooth, including all necessary site welding; shot blast clean steel members and apply Blast Primer to a dry film thickness of 20 microns and Holding Primer to a dry film thickness of 50 microns at works. Include also for powder coat finish to selected colour; include for all as indicated on Architects plans, elevations and as per Architects Specifications and to match railings</u> Double gate - composed of 60 x 40 x 3mm framing to four sides, infill with 2 no. 40 x 40mm RSA horizontal mid-rails, and 40 x 10mm solid vertical Flats at 95mm centres; hinges galvanised mild steel hinge lug shaped as shown on plan and welded to gate framing. Hole for hinge. 2 no. lockable latchs, 2no 6mm flat plate, push plate welded in-between flat uprights. 10mm dia. hole through catch and back plate for padlock. 2no drop bolts, fixed to box framing, include for all necessay latches, hinge spigots fixed to rendered masonary wall, brackets, catches, all to have powder coat finish, etc. complete, all as per Architects Drawing 356 and specification; size					
A	Overall 2,250mm wide x 2,100mm high	1	No			
	<u>ENTRANCE GATES</u>					
B	All works to to existing Gates are to be per Conservation Architect's Specification 3.19		Note			
C	A specialist ironworker with at least 7 years conservation expertise shall be employed to carry out this element of the work.		Note			
D	Gates to be repaired in situ. Only removed off site on approval of the Architect / Conservation Architect		Note			
E	Carefully take down and store on site existing entrance double gates (with Ironwork Piers) and single pedestrian gate to Evergreen Road. Remove existing rust using metal brush or sandblasting method, as required. Missing screws, bolts or/and pins are to be replaced with stainless steel or phosphor bronze fixings and should be isolated from the surrounding ironwork by nylon sleeves or top hats. Include for all necessary cleaning and removal of all existing paint and leave ready for new decoration (elsewhere measured). All to ISO 8501, ISO 8502, ISO 8503 and ISO 8505.		Item			
F	Extra over for targeted testing of existing painted surfaces, and removal of existing lead paint from Gates and railings via Lead-safe working practices.		Item			

To Collection €

					€	c
A	Include for all necessary repairs / reinstatement at all fixing points in existing masonary walls		Item			
B	Carefully takedown and dispose off site section of Existing Railing approx 2,000mm high, including breaking up and disposing off site existing concrete plinth under railing. include for all necessary saw cutting and reinstament to existing railing, and leave ready for new decoration.	5	m			
	<u>Cleaning Of Ironwork all per Conservation Architect's Specification 3.19.1</u>					
	Allow for all necessary cleaning, including shot blasting, to					
C	Double Gates with Ironwork Piers / Side Panels - approx 4,400mm wide x 2,200mm high	1	No			
D	Single Pedestrian Gate - Approx. 1,200mm wide x 2,000mm high	1	No			
E	Railing approx. 2,000mm high to boundary with School Campus	10	m			
	<u>Repair of Casting Flaws all per Conservation Architect's Specification 3.19.2</u>					
	Casting flaws are to be filled with a polysulphide mastic, to					
F	Double Gates with Ironwork Piers / Side Panels - approx 4,400mm wide x 2,200mm high	1	No			
G	Single Pedestrian Gate - Approx. 1,200mm wide x 2,000mm high	1	No			
H	Railing approx. 2,000mm high to boundary with School Campus	10	m			
	Repairs Gates / Railings					
J	Include for all necessary testing of the techniques pior to any necessary repair works to gates & railings		Item			
K	Welding with cast iron rods in small bursts over the damaged areas to Gates / Railing		Item			
L	Extra over for Cold Stitching technique repairs to gates / railings		Item			

To Collection €

					€	c
	Contractors to allow for 30% replacement of existing metalwork with matching metalwork to;					
A	Double Gates with Ironwork Piers / Side Panels - approx 4,400mm wide x 2,200mm high	1	No			
B	Single Pedestrian Gate - Approx. 1,200mm wide x 2,000mm high	1	No			
C	Railing approx. 2,000mm high to boundary with School Campus	10	m			
	Re-erect Existing Gates (Can be done as part of Phase 2 Works - Social Housing)					
	Re-erect existing iron gates after cleaning and repairs, in new location along entrace road as indicated on Architect's Drawing 104. Include for all necessary fittings, reinforced concrete foundation / plinth to ironwork piers / side panels, etc. complete. Allow for gates to be in a held open position.					
D	Double Gates with Ironwork Piers / Side Panels set into and including reinforced concrete plinth (to match existing) - approx 4,400mm wide x 2,200mm high	1	No			
E	Single Pedestrian Gate - Approx. 1,200mm wide x 2,000mm high	1	No			
	Painting of Ironwork					
	Following cleaning and repairs, ironwork elements are to be primed and painted. Colours to be agreed. Application of coating: a) Primer: Two coats of zinc-based primer, conforming BS 4652, dry film thickness of 60 microns approximately. b) Base coat: One or two bases of chlorinated rubber. c) Finish coat: One or two coats of gloss paint, being 35 microns and 25 microns respectively. Avoid watersoluble acrylic paint. To be Alkyd bases. All per Conservation Architect's Specification 3.19.3					
	Both Faces of Gates / Railings Measured to					
F	Double Gates with Ironwork Piers / Side Panels - approx 4,400mm wide x 2,200mm high	20	m2			
G	Single Pedestrian Gate - Approx. 1,200mm wide x 2,000mm high	5	m2			
H	Railing approx. 2,000mm high to boundary with School Campus	40	m2

					€	c
	BRICKWORK AND BLOCKWORK: Blockwork					
	Concrete blocks to I.S.20; to I.S. 325 and EN 771-3; compressive strength 13.5N/mm2; 440 x 100 x 215mm nominal size; in mortar 1:1:5 or 6 mixture of Cem 1; strenght class M4 to BS EN 998-2; laid in half lap stretcher bondwith neat flush pointing as the work proceeds; all as per Architects Specification F 10 355 and Engineers Specification 355A					
	Walls to planters					
A	100mm thick walls	19	m2			
	Labours					
	On blockwork					
B	Generally		Item			
	STONEWORK: Stone Cladding					
	DESIGN RESPONSIBILITY: The Architects drawings and specifications are indicative of the design intent and define the performance criteria, the mandatory geometry of the exposed surfaces including joint positions, and detail the required principal materials and visible finishes. The Specialist Sub-Contractor shall be responsible for developing and completing the design in accordance with the above and the other contract documents, taking into account any additional criteria which, with his specialist knowledge, he believes are relevant. The Specialist should refer to the drawings prepared by Nicholas O`Dwyer Consulting Engineers which describe the primary building structure which will be the basis of the secondary steel design prepared by the Specilaist. The Specilaist can put forward alternatives for consideration by the Architect. Additionally any suggested solutions described on the Architects drawings shall not in any way relieve the Specialist from his responsibility for the design and construction of the whole of the works; all as per Architects Specification H51 10 - 660		Note			
				To Collection €		

					€	c
	Walls					
	Natural stonework cladding to Convent Planter / Seat; backing wall concrete blockwork. STONE SLAB STANDARD; standard to EN 1469: DENOMINATION; denomination to BS 12440; name; Irish Limestone; Petrological family Limestone; FACE DIMENSIONS; Face dimensions, length (l) x width (b): see Architects drawings; THICKNESS; minimum 40mm (subject to structural calculations);. COLOUR: Very Light Gray (N8) to Light Grey (N7); FINISH; sanded or dry honed; SAMPLES; samples to be provided; Finish: shotblasted. - Supplier: Submit proposals. - Quality: Free from vents, cracks, fissures, discolouration, or other defects deleterious to strength, durability or appearance. Before delivery to site, season thoroughly, dress and work in accordance with shop drawings prepared by supplier. FIXINGS: stainless steel fixings to BS8298-1 and 2; Contractor designed; all as per specification clause H51/230 230 and 305. JOINTS: - Type: sealant filled as clause 600. - Bond pattern: see drawings. - Width (nominal): 5mm external. - Profile: recessed. CAVITY WIDTH (nominal): see drawings - Air gap: 50mm. all in accordance with the Works Requirements and in particular Architects drawings and specification clause H51/110					
	< 300mm wide					
A	forming Capping to wall, per Architects Drawing 916 detail 02	15	m			
	> 300mm wide

	Anti Graffiti Coating					
	Clear anti-graffiti matt finish coating (fluorine based copolymer); all in accordance with the Works Requirements and in particular Architects specification clause H51/110/12					
	< or = 300mm wide					
A	generally	15	m			
	> 300mm wide					
B	generally	11	m2			
	Flashings					
	Stainless Steel Flashing - Aluminium thickness: 3mm. FIXING: - Secret clip fixed to inner blockwork leaf to external wall of East Block. All to contractor's design. - End to end joints: butt jointed; external and internal corners should be welded and all welds ground down to provide a smooth and integral 3 dimensional profile. all in accordance with the Works Requirements and in particular Architects drawing 916 and Specification					
	Cover Flashing per Item 2 on Architect's Drawing 916; 4 times cranked.					
C	Width; 450mm - 600mm	12	m			
D	Ends	4	No			
	Land Drain					
	Land Drain to back of Planter per Architect's Drawing 916					
E	Supply and lay 100mm diameter PVC land drain wrapped in and including 1000G geotextile. include also for surrounding in peagravel bed and surround and for connecting to stormwater system. All per Engineers drawings and specifications	20	m			
F	Provide silt trap at end of each land drain run before connection to storm water sewer, all per Engineer's drawings and specification	2	No.			

To Collection €

					€	c
	Tanking					
	Tanking applied to blockwork walls. Specialist designed post-applied waterproof membrane composite sheet for tanking. To be used in conjunction with clause 297/B as required by specialist design proposal.. Manufacturer: GCP Applied Technologies or Equivalent, Bituthene 8000 or equivalent membrane. Third-party certification: NSAI Agrement Certificate. Form: Gas resistant, damp-proof and waterproof membrane. Carrier material: High-density polyethylene (HDPE). Primer: Bituthene Primer S2, or equivalent. Number of layers: As per manufacturers guidelines. Thickness/ gauge: 1.5mm. Weight:: 1.49 kg/m2. Water Vapour Transmission: To EN 1931, 105.000) 30% IE= sD/d.. Watertightness: To EN 1928, at 60 kPa: pass. Static Load Resistance: To EN 12730, .20: pass. Tensile Strength: To EN 12311-2, .180 N/50 mm (longitudinal); .180 N/50 mm (transversal). Reaction to Fire: To EN 13501-1, Class E. Joints Surfaces to be joined: Properly seal all joints with waterstop, joint filler and sealant as required. Bituthene membranes are not intended to function as the primary joint seal. Allow sealants to fully cure. Pre-stril all slab and wall cracks over 1/16 in (1.5mm) wide and all construction and control joints with 9in (230mm) wide sheet membrane strip. Laps (minimum): Side and end laps, 50mm at sides and ends, unless otherwise specificed by manufacturer guidelines and Agrement certificate. Sealing: As per manufacturers guidelines and Agrement certificate. Application temperature: -5C to +20C. All per Architects drawing 916 and Specification J40/297C					
	> 300mm					
A	Inner face of Planter	9	m2			
	< 300mm					
B	Inner face of Planter	3	m			
C	Base of Planter	7	m

	(40) ROADS, PATHS & PAVINGS - DVR					
	INFORMATION					
A	This element of the work has been measured from the Architects Drawing No's 104, 105, 125 and Engineer's Drawings Nos. C-001, 0401, 0440, 0460, 0550,		Note			
B	The Engineers and Architects drawings and specifications are all complementary to each other and should be read in conjunction with one another		Note			
C	The Contractor is advised that the Works Requirements and Pricing Documents are all complementary to each other and should be read in conjunction with one another		Note			
D	For detailed description of workmanship and materials see specification		Note			
E	The tenderers should examine the Architects and Engineers drawings and specifications and satisfy themselves as to the nature and extent of the works outlined below and should include for all costs in connection with same.		Note			
	Circulation Road & Parking Areas					
	Geotextile Membrane					
F	Geotextile membrane laid loose and all in accordance with the Engineers Specification, to be per CL 609 of the TII specification for roadworks	838	m2			
	Filling					
	Filling; imported granular material 6F2 to table 6/1 of the NRA specification for roadworks; spread and levelled in road base; average thickness					
G	> 250mm thick	378	m3			
	Filling; imported granular material type B sub-base to clause 808; spread and levelled in road base; compacted in layers in accordance with clause 802 of the TII specification for roadworks; average thickness					
H	< 250mm thick	126	m3			
J	Hardcore in forming raised table	7	m3			
	Asphalt Base layer					
	AC 32 Dense base 40/60; laid to falls and crossfalls

	Surface Drainage Channels to finish flush with door entrances				
A	1. Manufacturer: Submit proposals Product reference: Proprietary Die Cast Iron trapped gulley with removable access cover for rodding side or bottom outlet with Vari Level connector to allow for height adjustment of grating Substrate construction: Concrete bae and embedment over compacted granular fill / hardcore. - Type of grate/ Fittings: vari level extension piece with flat terrace grate (Stainless steel) to suit finish depth - min grating size 150 x 150 mm - Outlet: Vertical or horizontal outlet with screwed connection to buried 1100 OD drain to C/S Engineers specification and detail - Accessories: Provide sleeve to pipe when passing under walls. Submit sample prior to ordering. Bedding in concrete grade 25N and haunching to sides:-	32	m		
	Extra over for;-				
B	Stop Ends	32	No		
C	Trapped outlet complete with heavy duty access cover and jointing to 100mm diameter uPVC outlet pipe (elsewhere measured) including adaptor.	16	No		
D	1. Manufacturer: Submit proposals - Product Description: High performance channel drainage system fully compatible with paviours, setts, bricks or flags in pedestrian, driveway or medium traffic loading areas. Fully certified and CE marked to BS EN 1433 load class C250/D400. Falls are integrated into the base of the channel system. - Visible element: The system comprises a discreet 10 mm wide flared galvanized or stainless steel slot cover frame, over a polymer concrete channel drain unit. - Finish: Paving / Terrazzo is laid over the channel unit and butted up against the linear slot, leaving only the slim drainage slot visible on the surface. - Type of grate/ Fittings: Patented proprietary Galvanised mild steel slot suitable for level access over , and fitted with heelguard spacing - Outlet: bottom or side outlet direct to two tier type drainage outlet set into structural slab below, or via sump c/w access cover over. - Accessories: support brackets, jointing clips, covers and joint sealant forming part - of an integrated drainage solution. Bedding in concrete grade 25N and haunching to sides:-	20	m		
	Extra over for;-				
E	Stop Ends	6	No

A	Trapped outlet complete with heavy duty access cover and jointing to 100mm diameter uPVC outlet pipe (elsewhere measured) including adaptor.	3	No			
	Works Along Entrance Road Outside Adjoining School					
	Temporary fencing, hoarding, screens, planked footways, guard rails, gantries and similar items					
	Provide temporary fencing (min 2400mm high), hoardings, for protecting the public for the proper execution of the works and for effectively enclosing and protecting the site against trespass and interference. Obtain approval from the Employers Representative for all temporary hoardings and fences and comply with the requirements of the Local Authority					
B	Circa 38.0m long x 1.20m wide	1	Item			
C	Extra over last for removal and disposal of hoarding off site on completion of the works	1	Item			
	Ramp To Access Front Of Existing Convent Building					
	Excavation & Earthworks					
	Separating membrane; Terram 1000 Geotextile or equivalent; include for all necessary laps and joints; to manufacturers instructions					
	Horizontal					
D	Generally	14	m2			
	Reduce levels					
E	Depth < or = 2.0m	7	m3			
	Foundation trenches					
F	Depth < or = 2.0m	6	m3			
	Filling					
	Filling; T2 granular material in accordance with Annex E of S.R.21:2016; spread and levelled; in making up levels; average thickness					
G	< 0.25m	9	m3			
	Surface Treatments					
H	50mm minimum thickness T3 blinding material	14	m2			

To Collection €

					€	c
	Lean Mix Blinding;					
A	75mm minimum thickness, poured on or against earth or unblinded hardcore	14	m2			
	Damp Proof Course					
B	1000 gauge "Visqueen" or equivalent DPM laid on blinding in preparation for concrete footpath in accordance with the manufacturers instructions	14	m2			
	Concrete Grade C32/40;					
	<u>filled in on blinded hardcore / leanmix concrete and vibrated in:</u>					
C	Concrete Slab, 150mm thick; laid to falls	3	m3			
D	Foundations; reinforced; cast against sides of excavation	5	m3			
	<u>To walls; varying heights around ramp</u>					
E	200mm thick	2	m3			
	Sundries					
F	200mm deep two component cold applied high performance pavement joint sealant at junction with building, as per Engineers Details	12	m			
	Surface Finish; to falls and crossfalls					
G	Trowel finish and subsequently star roll upper surface	14	m2			
H	Trowel finish to top of in situ concrete upstand kerb; 200mm wide	20	m			
	<u>Steel fabric reinforcement all as before in:</u>					
	Reference A393; end laps per Engineers specification					
J	Horizontal	28	m2			
K	Vertical	19	m2			
	Formwork					
	<u>Wrot formwork having to Engineers Specification</u>					
L	Edge of paths; <250mm high	3	m			
M	Sides of walls (both sides of walls measured)	19	m2			

To Collection €

					€	c
	Upstand					
A	Form 125 x 75mm deep concrete upstand to top of retaining walls inclusive of all concrete, reinforcement, formwork, surface finish etc. complete	20	m			
	Paving					
B	Curdoroy profile Tactile Flags & Slabs landings	3	m2			
	Sundries					
C	Form fair joint with existing tarmacadam surface	2	m			
D	Allow for making good as necessary existing curved steps to Convent Main Entrance	1	Item			
	Metalwork; Non Structural					
E	Tubular stainless steel balustrade with 2Nr horizontal bars; vertical posts @ 1200mm c/c	20	m			
	Ramp To Rear Of Existing Convent Building					
	Excavation & Earthworks					
	Separating membrane; Terram 1000 Geotextile or equivalent; include for all necessary laps and joints; to manufacturers instructions

	(50) SITE SERVICES (PIPED AND DUCTED) - DVR					
	General Information					
	LOCATION DRAWINGS: Location drawings for this Element are listed in the drawing registers.		Note			
	WORKS REQUIREMENTS: The Contractor is referred to the Drawing and Specifications which accompany this Pricing Document. All Bill of Quantities descriptions shall be read in conjunction with ths information.		Note			
	PRICING DOCUMENT: The Contractor must refer to the Drawings and Specifications for full specification notes and details relating to particular items of work. The Contractor shalll be deemed to have studied the Drawings and Specifications in detail and included for all items necessary for the proper completion of the Works as defined therein.		Note			
	New watermain, foul & storm water pipework to be installed and commissioned BEFORE removal or diversion of existing services & before commencement of proposed building works. Existing school water services to be operational throughout the construction works.		Note			
A	The Contractor shall (1) prepare a Traffic Management Plan for the works, (2) prepare and submit to Local Authority "application for license for openings / crossings to roads, footpaths, verges and open areas", (3) pay all charges to Local Authority to obtain appropriate license, (4) manage the construction activities in accordance with the Conditions of the Opening License and the Traffic Management Plan, to include the safe regulated diversion of pedestrians and vehicular traffic.		Item			
B	Provide where work is executed beyond the boundary of the site in the public roads & footpaths for adequate watching and lighting, traffic signalling; temporary barricades walking platforms and warning notices sufficient to ensure the safety of all persons and removing same on completion, and carrying out the work to Local Authority satisfaction.		Item

	In accordance with sub-clause 1.7 of Irish Water Codes of Practice, the Contractor shall procure a Chartered Engineer to issue the below confirmations in writing, as part of their final documents submission to Irish Water for a Conformance Certificate. For the avoidance of any doubt this Chartered Engineer is NOT the Civil/Structural Engineer retained by the Employer as part of the Design Team.					
A	Confirmation by a Chartered Engineer in writing that the Works has been installed in accordance with the design submitted in the Connection Application.		item			
B	Confirmation by a Chartered Engineer in writing that the Works has been installed in accordance with Codes of Practice and Standard Details.		item			
C	Confirmation by a Chartered Engineer in writing indicating that the Work have undergone appropriate on-site testing, off-site testing and commissioning and provision of associated test result certificates.		item			
	*****FOUL WATER DRAINAGE*****					
	DRAINAGE: Below Ground					
	The Wastewater Installation must comply with all aspects of Irish Water`s (1) Code of Practice for Wastewater Infrastructure, and (2) Wastewater Infrastructure Standard Details, included at Volume D for information.		Note			
	Excavating trenches					
	Excavating trenches to receive pipes; starting from existing or reduced levels; earthwork support; preparation of surfaces; disposal of excavated material off site; backfilling trenches with clause 808 granular material in accordance with the NRA Specification for Roadworks, compacted as per clause 802; working space; non degradable marker tape complying with STD-WW-08					
	Pipes < or = 250mm nominal diameter					
D	depth 500 - 1000mm	91	m			
E	depth 1000 - 1500mm	257	m

(50) SITE SERVICES (PIPED AND DUCTED) - DVR Carried to Summary					

					€	c
	(60) SITE SERVICES (MAINLY ELECTRICAL) - DVR					
	General Information					
	LOCATION DRAWINGS: Location drawings for this Element are listed in the drawing registers.		Note			
	WORKS REQUIREMENTS: The Contractor is referred to the Drawings and Specifications which accompany this Pricing Document. All Bill of Quantities descriptions shall be read in conjunction with this information.		Note			
	PRICING DOCUMENT: The Contractor must refer to the Drawings and Specifications for full specification notes and details relating to particular items of work. The Contractor shall be deemed to have studied the Drawings and Specifications in detail and included for all items necessary for the proper completion of the Works as defined therein.		Note			
A	The Contractor shall (1) prepare a Traffic Management Plan for the works, (2) prepare and submit to Local Authority "application for license for openings / crossings to roads, footpaths, verges and open areas", (3) pay all charges to Local Authority to obtain appropriate license, (4) manage the construction activities in accordance with the Conditions of the Opening License and the Traffic Management Plan, to include the safe regulated diversion of pedestrians and vehicular traffic.		Item			
B	Provide where work is executed beyond the boundary of the site in the public roads & footpaths for adequate watching and lighting, traffic signalling; temporary barricades walking platforms and warning notices sufficient to ensure the safety of all persons and removing same on completion, and carrying out the work to Local Authority satisfaction.		Item			
	WORK BY OTHERS ENGAGED DIRECTLY BY THE EMPLOYER					
	Utility Providers					
	Manage, co-ordinate and provide all general and special attendances as required to the following utility providers:					
C	ESB Networks - mini-pillars, micro-pillars, mains cabling and unit connections	1	item			
	INCOMING ESB SUPPLY DUCTING					

To Collection €

					€	c
	ELECTRICAL INSTALLATION: Sundries and Builders Work / DRAINAGE: Below Ground					
	Excavating trenches					
	Excavating trenches to receive ducts; starting from existing or reduced levels; earthwork support; preparation of surfaces; disposal of excavated material off site; backfilling trenches with cement bound granular material (CBGM) and compacted Clause 804 imported fill material					
	Pipes < or = 250mm nominal diameter					
A	depth 500 - 1000mm [4 nr. 125mm diameter cable ducts]	37	m			
B	Extra for Yellow Marker Warning Tape; 250mm wide; ESB Code 2955090	37	m

(60) SITE SERVICES (MAINLY ELECTRICAL) - DVR Carried to Summary					

					€	c
	(70) SITE FITTINGS - DVR					
	INFORMATION					
A	This element of the work has been measured from the Architects Drawings Nos. 104, 105, 710, 711 & Architects Specification		Note			
B	The Architects and Engineers drawings and specifications are all complementary to each other and should be read in conjunction with one another		Note			
C	The Contractor is advised that the Works Requirements and Pricing Documents are all complementary to each other and should be read in conjuction with one another		Note			
D	For detailed description of workmanship and materials refer to Specifications		Note			
E	The tenderers should examine the Architects drawings and specifications and satisfy themselves as to the nature and extent of works outlined below and should include for all costs in connection with same.		Note			
	Cycle Stands					
F	Stainless Steel Cycle Stands; 1. Quantity - as shown on Architectural Drawing 105 2. Manufacturer: Submit proposal 2.1. Product reference: Sheffield Cycle Parking Stand (BXMW/GS0 Senior With Tapping Bar Sheffield Cycle Stand) 3. Stand type: Sheffield Cycle Stand 4. Number of stands: Single. 5. Base: Submerged baseplate. 6. Finish as delivered: Stainless steel. 7. Size:: 800 x 715 mm. Inclusive of all fixings, base plates etc. Inclusive also of bases and required excavation, disposal off site, concrete, formwork, reinforcement etc. complete, fixings, base plates. All in accordance with Architects Specification Q50	10	No			
				To Collection €		

					€	c
	Seating					
	Composite Item					
	1. Description: Location - refer Architectural Drawing 105. 2. Manufacturer: Omos 2.1. Product reference: S56 Bench 3. Material: Hardwood timber seat with cut stone ends and galvanized mild steel frame 4. Size: 2m length x 615 width x 455 height 5. Accessories/ Special requirements: Anti-graffiti coating 6. Method of fixing: Anchored base with concealed fixing. Inclusive also of bases and required excavation, disposal off site, concrete, formwork, reinforcement etc. complete. All in accordance with Architects Specification Q50					
A	Overall 2000mm long x 615mm wide x 455mm high; hardwood timber seat with cut stone ends and galvanised mild steel frame	9	No			
	Litter Bins					
B	1. Description: bin locations to be agreed with architect 2. Manufacturer: Omos 2.1. Product reference: s50 steel litter bin 3. Material: 316 Grade Stainless steel 4. Method of fixing: Base plate bolted to 400 x 400 x 400 mm concrete base 100 mm below paving surface and inclusive of all associated excavation, disposal off site, concrete, formwork, reinforcement etc. complete, fixings, base plates. All in accordance with Architects Specification Q50	2	No			
	External Clothes Dying Racks					
C	1. Location: Drying Area to East of DVR (East Block) Provide 4 no. racks - with 2 tiers each 2. Manufacturer: Submit Proposals 3. Size: 2 tier rack, 1m length x 550mm deep 4. Material: Galvanised and powdercoated steel. Inclusive of all associated fixings, complete	1	Item			
				To Collection €		

					€	c
	Signage					
	Signage; supply and fix complete; including backing board, post and all fittings; excavation, disposal off site, backfilling with selected excavated material compacted in layers; 450 x 450 x 700mm deep in-situ concrete grade C30/20 base; formwork; reinforcement complete					
	External Signage as per Architects Drawing 710, 711 and Specification N14/200; powdercoated aluminium sign and frame; lettering and translations into Irish Language to Architects later selection and approval					
A	Sign Type EX-01 - External Information Panel; 1300 x 460mm high sign; fixed to support posts	1	no			
B	Sign Type EX-02 - Set Down Area; 1000 x 230mm high sign; fixed to support posts	1	no			
	External Signage as per Architects Drawing 710, 711 and Specification N14/200; Grade 316 stainless plate; lettering and translations into Irish Language to Architects later selection and approval; with Braille included in colour band					
C	Sign Type EX-03 - External Room Signs; 200 x 200mm high sign; fixed to wall	5	no			
D	Sign Type EX-05 - Housing Front Door Sign; 1000 x 1000mm high sign; fixed to wall	1	no			
	Bollards					
E	Stainless steel Removable Flip Lid Retention Socket. When installed the socket is flush with the finished ground. The bollard is locked to the socket with padlock and the when the bollard is removed the flip lid covers the hole where the bollard was in place. Size:114mm diameters. No. Off: 2 Foundations: 500 x 500 x 300mm concrete pad on 150mm hardcore. Inclusive of associated excavation, disposal of excavated materials off site etc. complete	15	No			
	Balustrade					
	The following balustrade shall be fabricated for Grade 304 stainless steel having all welds ground smooth include for all necessary site welding and fixing, concrete bases in:					
F	75mm tubular stainless steel continuous balustrade & handrail; 900mm high, with 50mm diameter stainless steel 'middle posts' at 870mm c/c; complete inclusive of all required drilling, fixings, plates, welding, bolts, etc. complete	10	m			
G	Ditto; raking	48	m

	INFORMATION					
A	This element of the work has been measured from the Architects Drawings Nos. 103, 104, 105, 120, 903-916, Architects Specification, Engineers Drawings C-0401, 0440, 0500, 0501, 0550 & Specification		Note			
B	The Architects and Engineers drawings and specifications are all complementary to each other and should be read in conjunction with one another		Note			
C	The Contractor is advised that the Works Requirements and Pricing Documents are all complementary to each other and should be read in conjuction with one another		Note			
D	For detailed description of workmanship and materials refer to Specifications		Note			
E	The tenderers should examine the Architects drawings and specifications and satisfy themselves as to the nature and extent of works outlined below and should include for all costs in connection with same.		Note			
F	Meeting and adhering to all relevant statutory Health & Safety reqruiements, including provision of documentation & administration to comply with Health & Safety (Construction) Act 2001	1	Item			
G	Existing trees to be retained and protected in accordance with BS5873.	1	Item			
	Landscaping					
	Topsoil					
H	Take suitable excavated topsoil stored on site; spread and levelled; 450mm thick throughout	161	m3			
	Approved imported topsoil in accordance with Architects Specification Q28 and deposited in :					
J	450mm thick layer	1,434	m2			
K	Infill to planters	3	m3			
	Filter Medium Bioretention Soil					
	To comply with the recommendations of CIRIA REPORT C753 and as outlined on Enginieers Drawing C-050 Detail 01 and 02					
L	400mm thick layer	1,019	m2

	Mulch					
A	Supply and spread mulch per Architects Specification; 75mm deep	392	m2			
	Planting. Areas per Architects Drawing 105; all in accordance with Architects Specification Q31					
	Plants					
	Planting rates to include for all associated excavation, backfilling with specified materials, preparation and application methods all as outlined in Landscape Architects Specification					
B	Areas 'A' Wildflower Seed mix: per Architects Drawing 105. 50% wildflower mix 50% general amenity grass seed mix. Wildflower seed mix: Trifolium pratense (red clover) Trifolium repens (white clover) Valeriana officinalis Anemone nemorosa Caltha palustris Digitalis purpurea Cardamine pratensis Leucanthemum vulgare Hypericum elodes Primula veris Primula vulgaris Succisa pratensis	903	m2			
C	Areas 'B' Planting - Low shrub planting decorative: per Architects Drawing 105. Species: Achillea milefolium Allium Holandicum 'Purple Sensation' Aquilega Vulgaris Asplenium Scolopendrium Bellis perennis Betonica Officinalis 'Hummelo' Carex Flacca Crocosmia Masoniorum Deschampsia Cespitosa Dryopteris Filix-mas Geranium Pratense Helicotrichon Sempervirens Hermerocallis 'Lemon Bells' Kniphofia 'Tawny King' Lavendula angustifolia 'Hidcote' Luecanthemum Vulgare Muscari Americanum Narcissuss Poeticus Origanum Vulgare Plomis Russeliana Primula Veris Primula Vulgaris Rudbeckia Fulgida 'Goldstrum' Sanguisorba Officanalis Veronicastrum Virgimicrum 'Album' Veronicastrum Virginicum 'Erica' plants approc 30cm height, 30cm spacing	514	m2			
	Hedges					
D	Planting - Shrubs to site boundary 1.5m high Species: Rosa Canina Illex Aquiform	57	m			

					€	c
	Trees					
	Excavate and dispose of surplus subsoil off site, include for backfilling with topsoil to 75mm deeper than root system and wide enough to accomodate roots when fully spread, supply and plant semi mature trees each having double stake and crossbar, protect as required, all as per Architects Specification					
A	'F' Clear Stemmed semi-mature trees Species: Alder Downey Birch Bird Cherry Sessile Oak	15	No			
B	'G' Multi Stemmed Semi Mature Trees Species: Spindle Goat Willow Hawthorn Sloe	19	No			
	Tree pit root barriers					
C	Greenleaf ReBoot 2000 or equivalent, all per Architects Specfication Q31/510	34	No			
	Tree pit irrigation and ventilation accessories					
D	Mona plant irrigation system ring 77 or equivalent, all per Architects Specification Q31/512	34	No			
	Tree Pit Drainage					
E	1. Depth of excavation: Increase from specified size to allow for aggregate layer, with base slightly falling to outlet 2. Aggregate layer: Clean gravel or broken stone, with no fines, graded 40 to 20 mm 2.1. Depth: 200 mm 3. Geotextile filter: Contractor's choice, submit proposals 3.1. Position: Lay over aggregate before installing tree or backfill 4. Completed pits: Test for free drainage before planting	34	No			
	Underground Guying					
F	1. Manufacturer: Platipus Anchors Limited 1.1. Product reference: Platypus RF1P for Multistem Trees 2. Anchoring system: Three no. drive-in anchors 3. Installation: Ensure that tree is positioned correctly and vertically, prior to tightening of guy linetensioners	34	No			
	Tree Ties					
G	Tree ties in accordance with Architects Specification Q31/530	34	No			
	Staking - Double Staking					
H	Double staking in accordance with Architects Specification Q31/550	34	No			

To Collection €

					€	c
	Tree Protection					
A	1. Type: Spiral 2. Material: Tubex Spiral Guards, PVC 600mm high x 38mm diameter 3. Size: 0.6m high x 150mm diameter 4. Colour: Brown 5. Support: Single timber stake (where no support for small trees) 6. Additional requirements: Ensure that protection methods do not impede natural movement of trees or restrict growth	38	No			
	Fencings/Edgings					
	Allow for timber edgings in dividing Allotments					
B	Timber Edgings; Softwood LARCH board- Size: 225 mm x 15 mm; Fixing: Nailed to 50 mm x 50 mm x 600 mm long softwood pegs driven into the ground at 1200 mm centres; Installation height: 30 mm below grass surface; Curved boards: Closely spaced vertical grooves cut in the back to achieve smooth flowing lines; Preservative treatment: As section Z12 and British Wood Preserving and Damp proofing Association Commodity Specification C4.	76	m			
	MAINTENANCE					
	1. Duration: Carry out the operations in the following clauses from completion of planting until 24 months after Substantial Completion. 2. Frequency of maintenance visits: Monthly during growing season. More frequent, as required eg for watering					
	Failures of planting					
C	1. Defects due to materials or workmanship not in accordance with the contract: Plants/ trees/shrubs that have failed to thrive 1.1. Exclusions: Theft or malicious damage after completion. 1.2. Rectification: Replace with equivalent plants/ trees/ shrubs. 2. Replacements: To match size of adjacent or nearby plants of the same species or to match the original specification: whichever is the greater 3. Timing of making good: As soon as possible and at the suitable time of year. All in accordance with Architects Specification Q31/720	1	Item			
	Cleanliness					
D	1. Soil and arisings: Remove from hard surfaces and grassed areas 2. General: Leave the works in a clean, tidy condition at completion and after any maintenance operations. All in accordance with Architects Specification Q31/740	1	Item			

To Collection €

				€	c
	Planting maintenance generally				
A	1. Weed control: Maintain weed-free area around each tree and shrub 1.1. Diameter (minimum): The larger of 1m or the surface of original planting pit 1.2. Keep planting beds clear of weeds: By maintaining full thickness of mulch 2. Planted areas: Fork over beds as necessary to keep soil loose, with gentle cambers and no hollows. Take care not to reduce depth or effect of mulch 3. Precautions: Ensure that trees and shrubs are not damaged by use of mowers, nylon filament rotary cutters and similar powered tools 4. Firming up: Gently firm loosened soil around trees/ shrubs. Straighten leaning trees/ shrubs 5. Trees: Spray crown when in leaf during warm weather. 5.1. Timing: After dusk. 6. Tree accessories: Check condition of stakes, ties, guys, guards, and irrigation and ventilation systems 6.1. Broken or missing items: Replace. 6.2. Loose stakes: Re-firm in the ground or replace as necessary to provide support to the tree. 6.3. Loose guys: Re-firm anchor points and adjust as necessary to provide support to the tree. 6.4. Ties: Adjust to accommodate growth and prevent constriction or abrasion. 6.5. Damage to bark: Cut back neatly with sharp knife. Prevent further damage. 6.6. Frequency of checks: Every month 7. Watering: As required for healthy establishment, depending on weather conditions. All in accordance with Architects Specification Q31/750	1	Item		
	Planting maintenance - pruning				
B	1. General: Prune to promote healthy growth and natural shape 1.1. Dead, dying, diseased wood and suckers: Remove. 1.2. Timing: As appropriate to the species 1.3. Trees: Favour a single central leading shoot 2. Arisings: Remove. All in accordance with Architects Specification Q31/760	1	Item		
	Woodland planting maintenance				
C	1. Watering: Only as necessary to prevent plants wilting 2. Loose plants: Re-firm surrounding soil, without compacting 3. Weed control: Cut down and remove weeds prior to setting seed in a 1 m-diameter area around each tree 4. Vegetation except trees and coppice shoots to be retained: Cut within the plantation area 4.1. Height (maximum): 50 mm 4.2. Arisings: Leave between rows. 5. Mechanical, chemical or mulching methods of vegetation control: Submit proposals. 6. Ditches and drains: Keep clear 7. Watering: As required to maintain healthy planting. All in accordance with Architects Specification Q31/770	1	Item		

				€	c
	Maintenance instructions				
A	1. General: Before end of the maintenance period, submit printed instructions recommending procedures to be established by the employer for the maintenance of the planting work for one full year: Provide a schedule of any ongoing maintenance problems experienced during the rectification period.	1	Item		
	790 Final mulching				
B	1. Timing: At end of the maintenance period 2. Watering: Ensure that soil is thoroughly moistened prior to re-mulching, applying water where necessary 3. Planting beds: Re-mulch 4. Depth (minimum): 75 mm 5. Trees: Re-mulch 6. Depth (minimum): 75 mm	268	m2		
	Testing, Surveys & Samples				
	Include for all testing, surveys, samples & warranty requirments as set out in the Architects works requirements				
C	Testing		Item		
D	Surveys		Item
