Call for Tender: Solar PV Replacement and EV Charging Station Installation [ref CfT2026/111]

CLARIFICATIONS SCHEDULE NO.1

6 November 2026

Clarification Request		Date	Response
1	We are an Irish based company and are safe electric registered, however since this CFT covers sites in Ireland and NI, we are unsure if safe electric will suffice to cover the NI side as this may be outside of safe electric jurisdiction. As this is a unique CFT, how can irish Safe electric registered companies bavigate this hurdle.	4.11.26	The Contract covers works at locations in both Northern Ireland and Ireland. Tenderers are required to comply with all relevant legislation, regulations, standards and statutory requirements applicable to the jurisdiction in which the works are being undertaken, as set out within the Contract and Scope and Specification. Safe Electric registration is applicable to electrical contracting activities within Ireland. Where works are undertaken in Northern Ireland, the Contractor will be responsible for ensuring that it, and the personnel undertaking the works, meet all applicable Northern Ireland/UK legislative, regulatory, competency and certification requirements relevant to those works. The requirement is therefore not intended to prevent an Irish-based or Safe Electric registered contractor from tendering. However, tenderers must satisfy themselves that they are appropriately qualified, competent and authorised to undertake and certify the relevant works in each jurisdiction and must maintain any registrations, certifications, insurances or other requirements necessary for delivery of the Contract. Tenderers should price their submission on this basis.
2	Can we please request the site plans for each site and roof schematics/elevations for Prehen.	6.11.26	Plans will be issued by the Project Manager, to all organisations which have requested site visits, in the latter part of w/c Monday 9 November 2026.
